RESOLUTION ON THE REPORT OF THE SANITARY COMMISSIONE BENGAL, FOR 1894.

MUNICIPAL DEPARTMENT—SANITATION.

Calcutta, the 1st July 1895.

RESOLUTION—No. 2607S.

READ—

The Report of the Sanitary Commissioner, Bengal, for the year 1894.

Read again—

The Report of the Sanitary Commissioner, Bengal, for 1893, with the Resolution of Government recorded thereon.

The opening paragraphs of the report review the progress of sanitation in Bengal in a tone of complacent optimism which is by no means borne out by the record of the year's administration. This note runs through the entire volume, which is further disfigured by looseness in the handling of statistical data, and a tendency to quote unconfirmed opinions in proof of doubtful propositions to an extent which seriously detracts from its value. After careful study of the materials compiled by Dr. Gregg, the Lieutenant-Governor can find no grounds for the assertion that the year 1894 is conspicuous for a great advance in the direction of sanitary reform. No doubt, more attention is paid to the subject than was the case some years ago, and local bodies are beginning to realise the value of a pure water-supply. But little more than a beginning has been made, and the bulk of the people, not excepting a large proportion of the educated classes, still regard attention to the most essential details of sanitation as an inconvenient hobby which has been forced upon them from without, and which they themselves look upon with distaste or indifference. Sir Charles Elliott fully recognises the energy which the officers of the Sanitary Department have devoted to a somewhat thankless task, but he cannot agree in thinking that the results of the past year are such as to offer any reasonable grounds for proclaiming the birth of a new era.

The chief sanitary event of the year was the opening of the Arrah water-works, for which the district is mainly indebted to the energy of the Collector, Mr. Skrine, and the liberality of Raja Rajeswari Pershad Singh of Surajpura, whose public-spirited conduct has been rewarded by His Excellency the Viceroy and Governor-General of India by the conferment of the title of Raja. The filter beds which were at first found to act imperfectly, have been reconstructed with fine sand, and the water is now believed to be excellent and popular. The Magistrate has reported that cholera prevailed in the town in August, and that in the parts of the town where the pipe-water was used, greater immunity was enjoyed than elsewhere. The evidence, however, on this point is not strong, as the water had not then come into very general use.

Birth-rate.

2. The births registered in Bengal during 1894 numbered 2,332,24 giving a birth-rate of 32·81 per mille, against 2,534,859, or 35·66 per mille in 1893. The birth-rate therefore was 2·85 less than that of the previous year, and 2·07 less than the death-rate of the year under report. The following statistics, comparing the chief provincial birth-rates for 1894, show not only that Bengal, which stood third on the list in 1893, has now fallen to fifth, but that, while the standard of all other provinces has risen, Bengal alone exhibits a marked decline in this respect:—

Punjab ...	43·93	Bengal ...	32·81
North-Western Provinces	39·70	Assam ...	31·09
Central Provinces ...	38·82	Burma ...	28·0
Bombay	35·08	Madras ...	27·7

Notwithstanding this falling off, and although the recorded birth-rate stands condemned by the mere fact that it is over two per thousand less than the death-rate, and 18·99 less than the birth-rate of 51·8 estimated for Bengal by the English actuary Mr. Hardy,* the Sanitary Commissioner, who in 1891 himself estimated the normal birth-rate at something over 40 per thousand, now expresses his satisfaction at the progress made in registration, and maintains that

*Census of India, volume II, Appendix III.

births were more carefully recorded than in any previous year. The only attempt made to justify this apparent paradox consists of a vague reference to the general unhealthiness of the season, as affecting the birth-rate, and of the suggestion that when malaria is prevalent, many premature births probably occur. The latter hypothesis can neither be proved nor disproved; but even if it be assumed to be correct, the alleged cause can hardly have operated on so large a scale as to reduce the recorded births by more than 200,000. As for the former, it may be observed that in his report for 1893, Dr. Gregg showed that the largest number of births occurred in the three most unhealthy months of the year, while the statistics given in paragraphs 20 and 28 of the present report, interpreted as he proposes to interpret them, fail to establish any uniform correspondence between an increase in the death-rate and a decline in the birth-rate of particular months. January, for example, with the highest increase in mortality, shows a substantial rise in the birth-rate; while October, which in 1893 had the largest increase in the ratio of births along with the highest mortality, now shows a nominal increase in mortality and a large decline in the birth-rate. It would, however, be fruitless to discuss the question further, for it is obvious that, even if it be conceded that a single unhealthy season affects fertility—an assumption which is believed to be open to doubt—the consequent reduction of births could not, in the great majority of cases, take effect before the following year. It may be added that the variations of the birth-rate in different months are probably determined to some extent by the seasons regarded as lucky or unlucky for marriage as well as by climatic conditions affecting the general health of the population.

Registration of births—Towns.

3. In both 1893 and 1894 births were registered in 147 towns, with a population of 3,453,465, but the number of births recorded in 1894 was 78,644, giving a ratio of 22·77 per 1,000 of the population, as compared with 90,743, or a ratio of 26·27 per 1,000 in the previous year. Everywhere the standard of registration shows a marked falling off. The recorded birth-rate exceeded 40 per mille in the towns of Jamalpur (47·98), Chatra (46·83), Lohardaga (43·45), Bihar (41·02), and Sasaram (40·06). In seven towns it was between 35 and 40, in twenty-one between 30 and 35, and in sixty-four 20 to 30. It was below 20 in no less than fifty towns, as compared with 17 in 1893; while Jhalakati, South Barrackpore and Nasirabad showed less than ten per mille, the figures being 6·34, 7·88, and 8·39, respectively.

These results are very defective, and the Sanitary Commissioner should now take the subject up carefully, in communication with the civil authorities, and should ascertain precisely what arrangements are in force in each place which fails to register births effectively, and the reasons of the failure.

Registration of births—Rural areas.

4. Births were registered in 553 rural areas with a total population of 67,616,768. The total number registered was 2,253,603, against 2,444,116 in 558 such areas, with a population of 67,616,178 in 1893. The birth-rate was 33·32 per thousand of population, as compared with 36·14 in the previous year. The highest rates for the rural areas in a district were obtained from Palamau (43·82), Backergunge (43·75), and Hazaribagh (40·27), and the lowest rates were recorded in Manbhum (25·94), Purnea (27·33), 24-Parganas (27·81), Darjeeling (28·33), Singhbhum (28·93), Jessore (28·74), Hooghly (28·83), Midnapore (29·72), and Shahabad (29·34). In all the remaining rural areas the birth-rate varied from 30·02 in the district of Burdwan to 39·33 in Lohardaga. Although births were registered all over Bengal, excepting the South Lushai Hills and the new district of Angul, the Compulsory Registration Act is only in force in towns.

Births according to sex.

5. The total male births in both urban and rural areas numbered 1,202,323, and female births 1,129,925, giving a proportion of 106 male births to every 100 female births, against a proportion of 107 in the previous year. The Sanitary Commissioner observes that the proportion of male to female births is the same as has been ascertained to prevail in France and the German Empire, and refers to this correspondence as proving that the registration of births is fairly accurate. But, even if there were no independent reasons for doubting the accuracy of birth registration in Bengal, Dr. Gregg's inference is obviously unsound. Until

a sufficient body of really accurate statistics has been collected and examined, it is impossible to say that the normal proportion of male to female births in India bears any definite relation to that which prevails in Europe; and the facts now put forward merely prove that a set of figures known to be very incomplete happens to bring out the same ratio as statistics collected elsewhere under very different conditions. This may be nothing more than an accidental coincidence, due to the well-known tendency to regard girls as less important than boys. But even if the proportion given be the true one, which is quite possible, that would only show that the number of births not reported is much the same for both male and female children. In no case could the accuracy of the birth statistics, as a whole, be inferred from the possible accuracy of the proportion of male to female births.

Registration of deaths.

6. The total number of deaths registered during the year was 2,479,096 as compared with 2,005,463 in 1894, giving a rate of 34·88 to 1,000 persons living, as against 28·21 in 1893. The following statement compares the provincial death-rates for the last two years:—

	1894.	1893.
North-Western Provinces ...	42·51	24·10
Central Provinces	37·22	27·70
Punjab	36·52	28·13
Bengal	34 88	28·21
Bombay	32·26	27·20
Assam	30·69	30·28
Burma	24 0	21·58
Madras	20·0	19·3

Judged by these figures, the year 1894 seems to have been decidedly an unhealthy one for the whole Empire, and although the Bengal statistics of mortality are still considerably below the average death-rate of 44·8 per thousand, as estimated for Bengal by Mr. Hardy, the increase of 6·67 per thousand in the past year does no doubt in some measure correspond to the true increase of mortality, the more so as in a notably unhealthy year the reporting agency is usually more on the alert, and more closely supervised by the district and sanitary authorities. It is difficult, however, to follow the Sanitary Commissioner in his attempt to account for the unhealthiness of the year by reference to its meteorological conditions. In those parts of the Province where cholera is attributed to the defective rainfall of June, July and August, the returns show that, with a single trifling exception, the amount of rain that fell was substantially in excess of the normal quantity. Similarly, the theory that the enhanced fever mortality was caused by excessive rainfall in the last quarter of the year, seems to overlook the every-day experience that fever is a slow-acting disease, and that people who fall ill towards the end of one year, probably die in the earlier months of the next year.

Deaths in towns.

7. Deaths in urban areas increased from 30·03 in 1893 to 35·34 in the year under review, the figures ranging from 82·33 in Chaibassa to 10·57 in Jhalakati. Jagdispur (74·78), Buxar, Bhadreswar, Dumraon, and Bansberia returned rates of more than 60 per thousand; fifteen other towns showed more than 50; and thirty more had a death-rate between 40 and 50 per thousand. Altogether 33 out of 147 towns returned a death-rate in excess of 44·8 per 1,000, the normal rate referred to above. It is observed that of the 21 towns which return a death-rate in excess of 50 per thousand, only six are situated in the unhealthy tract described by the Sanitary Commissioner at page ccxxxviii of the Report.

Baruipur, Darjeeling, Khulna, Cossipore-Chitpur, Sirajganj, Nalchiti, Pabna, Maniktala, Jhalakati.

The towns named in the margin return figures below 20 per 1,000, and in all of them, except perhaps Darjeeling, the registration of vital statistics demands the attention of the local officers. In Darjeeling it seems probable that the actual death-rate is low, this result being due partly to the healthiness of the town, and partly to the character of the population, which is largely made up of immigrants from Nepal and from various parts of the plains of India. A large proportion of these are not permanently domiciled in Darjeeling, and the tendency is for them to leave the place and go home when they fall ill. Deaths, therefore, among this class, as among the similar class in Calcutta,

are excluded from the Darjeeling death-rate, while at the same time such quasi-residents go to swell the population on which the rate is calculated.

The death-rate of Calcutta is shown in the report to be 32·92 per thousand, a rate which, if it could be accepted without qualification, would compare favourably with 35·94, the recorded mortality for Bengal towns, especially if allowance be made for the latter figure materially understating the true facts. The Sanitary Commissioner seems to have no misgivings on either of these points, and observes:—"Now that mufassal death registration is approximating (*sic*) accuracy, the figures begin to show the true relative mortality which is in favour of Calcutta." But it may fairly be assumed that the record of mortality in the mufassal is at least ten per cent. below the truth, for there is no reason to suppose that Bengal towns have a death-rate lower by nearly 9 per thousand than the average estimated death-rate for the province; it would probably be nearer the truth to put their average death-rate at 50. In the case of Calcutta, the statistics may be taken to be fairly accurate, but it is doubtful whether the recorded death-rate gives a correct idea of the healthiness or unhealthiness of the town. The aggregate death-rate is, as stated above, 32·92, but this is made up of a mortality of 28·83 among 446,746 males, and of 40·70 among 234,814 females. The male population contains a large proportion of temporary residents who have their fixed homes elsewhere, and who tend to leave Calcutta directly they fall sick, unless they are struck down by acute diseases, such as cholera or small-pox. The female population, on the other hand, is comparatively stationary, and it seems probable, therefore, that their death-rate more truly represents the mortality actually caused by the conditions of life in Calcutta. In other words, females who contract a fatal illness in Calcutta die, as a rule, in the town, and their deaths contribute to the record of mortality; males, on the other hand, often go home to die, and their deaths are recorded elsewhere. It is believed that a more searching analysis of the mortality among different races and classes in Calcutta would confirm this conclusion; but the data for such an examination are not given in the Sanitary Commissioner's Report, and the Lieutenant-Governor hopes that the annual report of the Calcutta Corporation will afford materials for dealing more fully with the question.

8. The death-rate in rural areas increased from 28·12 in 1893 to 34·85 during 1894. The district of Shahabad returned a death-rate of 52·95 per thousand for rural areas. In nine other districts the rate was above 41, in 20 above 30, and in the rest it was above 20 per thousand. Among units smaller than a district, the highest figures were recorded in the areas named in the margin, only one of which is situated in the unhealthy tract described in Appendix VI. Dr. Gregg considers the exceptional unhealthiness of the year to be the cause of this excessive mortality. Fever, cholera, and bowel-complaints were unusually excessive. The most unhealthy districts as regards rural areas were Shahabad (52·95), Gaya (46·09), Monghyr, Darjeeling, Saran, Muzaffarpur, Palamau, Patna, Champaran, and Bhagalpur.

Deaths according to sex.

9. The death-rate of males per thousand of population was 37·16 and of females 32·61, against 29·91 and 26·53, respectively, in the previous year. The difference is larger than in 1893, and may be partially accounted for, as in the case of birth registration, by the fact that males are deemed more important than females, and their deaths are more accurately reported. It is probable, however, that this cause does not account for the whole of the difference. In his note on age distribution and rate of mortality in India, already referred to, Mr. Hardy has shown that the death-rate is much lower among females in the first year or two after birth, but that the difference between the sexes diminishes until, between six and seven, the mortality is the same. From this point, females die more rapidly than males, especially between fifteen and twenty, after which, female

mortality again approaches the male, until, at the age of thirty-six, the rates are once more equal. After thirty-six female mortality is lower than male for the remainder of life. On the basis of these calculations, which correspond in the main to the results arrived at in Europe, Mr. Hardy estimates the death-rate for males in Bengal during the ten years 1881—1891 at 45·9 per thousand living, and for females at 43·8, showing a difference of 2·1 per thousand in favour of the latter. This difference is much the same as in England. It may be added that the jail statistics for 1894 show the death-rate of males to be 32·4 and that of females 28·1, and although in this case the great disparity of numbers (18,956 males against 1,086 females) detracts from the value of the latter figure, it is obvious that women in jail are to a great extent removed from the influence of the causes which contribute largely to female mortality during the period of sexual maturity. The following table shows the death-rate in Bengal according to age during 1894 and the previous year:—

	In 1894.		In 1893.	
	Deaths.	Rate per mille.	Deaths.	Rate per mille.
1	2	3	4	5
Under one year	486,640	212·22	429,676	187·38
1 year and under 5 years ...	357,810	44·80	291,959	36·56
5 to 10 years	201,209	18·77	161,461	15·06
10 to 15 ,, ...	111,906	14·43	91,352	11·78
15 to 20 ,, ...	108,605	18·45	91,676	15·58
20 to 30 ,, ...	242,468	20·88	189,377	16·31
30 to 40 ,, ...	238,162	23·59	180,873	17·91
40 to 50 ,, ...	212,684	31·13	162,684	23·81
50 to 60 ,, ...	191,475	47·09	142,689	35·09
60 years and upwards ...	328,137	85·48	263,716	68·70

The statistics show a large increase in the death of infants under one year of age, the ratio being 212·22 per mille, as compared with 187·38 in 1893.

Result of convictions for failure to report.

10. During the year 1,923 persons were convicted for neglect to register births and deaths at the registering circle The amount of fines imposed was Rs. 2,657-15 and the persons warned numbered 452, against 1,000 persons convicted, with fines of Rs. 1,316, and 268 persons warned in the previous year. Amongst the persons convicted, two were imprisoned for seven days, one for ten days, and three sentenced to simple imprisonment for one month each. There appears to have been no case instituted in the districts of Chittagong, Lohardaga, and Palamau. The grand totals of the statement in Appendix III should have been made out and compared with the totals of 1893.

Death-rate from various causes.

11. The following table shows separately the death-rate from the principal diseases during the year, compared with 1893 and the previous five years, 1889—93:—

Causes of Death.	In 1894.			In 1893.			In 1889—93.		
	Urban.	Rural.	Combined.	Urban.	Rural.	Combined.	Urban.	Rural.	Combined.
1	5	6	7	2	3	4	8	9	10
Cholera	3·88	3·29	3·32	2·18	1·76	1·78	3·48	2·60	2·65
Small-pox	·18	·11	·11	·19	·20	·20	·39	·20	·21
Fever	19·19	25·62	25·32	16·88	20·98	20·78	13·39	19·14	18·86
Dysentery and diarrhœa	3·84	·67	·82	2·98	·45	·57	2·90	·56	·67
Injury	·50	·42	·43	·49	·43	·44	·47	·41	·42
Other causes ...	7·73	4·70	4·85	7·28	4·27	4·42	7·13	3·56	3·74

It will be seen from the above that, with the exception of fever, the death-rate from all other causes is highest in urban areas. The reason assigned by Dr. Gregg is the same as was given in the year previous—that in towns the crowding of persons together leads to the fouling of air, water, and soil, and to the consequent increased propagation of infectious diseases. The excessive increase under cholera and fever is especially noticeable, and is discussed at length below. The statement in paragraph 26, comparing the incidence of disease in the four chief divisions of the Province, is interesting so far as it goes, but it should be drawn up for a period of ten years, and the average death-rate should be calculated for the longest period for which approximately accurate figures are believed to be available. The same method should be applied to the statistics of the principal diseases for each district.

Cholera.

12. The total number of deaths from cholera recorded during 1894 was 236,150, yielding a ratio of 3·32 per thousand of population, against 126,976 deaths, or 1·78 per mille in the previous year, while for the five years 1889—93 the average was 188,421, or 2·65 per thousand. If these figures can be trusted, the death-rate from cholera was considerably in excess of that recorded in the previous year. Allowance must, however, be made for the tendency, noticed by Dr. Crawford of Monghyr, to include cases of simple diarrhœa in the returns, and it is probable that this tendency is greater in a year when cholera is prevalent. The worst months for cholera were May, June, July and August in Bihar, May, July and August in Orissa, and June, July and August in Chota Nagpur. In Bengal Proper the disease prevailed most largely in the first four months of the year. The Sanitary Commissioner observes that the cholera of June, July and August in Bihar, Chota Nagpur and Orissa "was caused by the defective rainfall in these months," adding that the high temperature favoured the growth of the cholera microbe. The latter statement takes for granted the truth of a hypothesis believed to be still under discussion; while as to the former it should be remarked that during June, July and August the rainfall in the areas referred to (except in Orissa during August) exceeded the normal amounts by proportions varying from 8 to 54. In individual districts the highest death-rates from this disease occurred in Palamau (11·16), Shahabad (9·44), Champaran (8·25), Gaya (7·64), Muzaffarpur (5·16), Balasore (4·93), Darbhanga (4·74), and Monghyr (4·49); while in Darjeeling the mortality was only ·08, and in Lohardaga, Jalpaiguri, Rangpur, and Bogra it was below 1 per mille, or ·09, ·35, ·44, and ·76, respectively.

In paragraph 36 of his report, the Sanitary Commissioner gives a table comparing the death-rate from cholera in each district during 1894 with the rate for 1893, and the average rate for the five years 1889—93, and observes that "Palamau, Shahabad, Champaran, Gaya, Muzaffarpur, and Monghyr, which during the past six (? five) years have not been afflicted with a high rate of cholera mortality, suffered very severely during the year under report, whilst Puri and Purnea, which are notorious for their cholera mortality, suffered very slightly during the year under report in comparison with past years." These remarks illustrate the danger of drawing conclusions from averages calculated for comparatively short periods. In Purnea, for example, though the average for 1889-93 is 4·44, the statistics of mortality for the ten years 1884—93 yield an average death-rate of only 2·64, which compares favourably with Champaran (2·96), Shahabad (2·85), and Gaya (2·65), and certainly does not bear out the Sanitary Commissioner's remark that the district is notorious for its cholera mortality. Conversely Dinajpur, which, on the figures for ten years, shows an average mortality of 8·64, the highest in the whole province, is entered in Dr. Gregg's five-year table with a death-rate of only 1·08. The sanitary arrangements at fairs seem to have been effective, and no outbreak of disease occurred at any of these gatherings. As regards pilgrims, it is stated that District Boards and other local authorities have done a great deal to improve the water-supply along the road to Puri, by sinking wells and improving tanks. In Bankura and Midnapore no epidemic occurred, and the fall of the Puri death-rate from 6·19 (average for ten years) to 2·10 speaks for itself. The Sanitary Commissioner quotes an interesting extract from a report by the Civil Surgeon of Puri, arguing that but for deaths among pilgrims and the effect, both direct and indirect, that the influx of pilgrims has upon the health of the resident population,

the town would be among the healthiest in Bengal. Dr. Banks deserves great credit for the admirable sanitary work that he has done in Puri, and the Lieutenant-Governor hopes that the construction of closed wells along the Jagannath road, the improvement of the town conservancy, and the cleansing of the sacred Swetganga tank, which has now been vigorously taken in hand by the religious community in Puri, will result in a great diminution of preventable disease. The Magistrate of Balasore, Mr. Brajendra Nath De, writes that no "disease of any kind broke out amongst" the pilgrims passing through the district, but the Lieutenant-Governor cannot reconcile this with the fact that Balasore stands sixth in the order of cholera mortality for the province, or with the Magistrate's statement that 90 cases of cholera, of which 40 ended fatally, occurred among the pilgrims.

Small-pox.

13. Deaths from small-pox during 1894 numbered 8,404, or ·11 per mille, against 14,531, or ·20 per mille in the previous year, and an average of 15,075, or ·21 per thousand of population in the five years 1889—93. The mortality of the year from this cause was the lowest on record. The highest death-rates are returned from Cuttack (·88 per mille), Calcutta (·59 per mille), Monghyr (·50 per mille), and Puri (·42 per mille), while Darjeeling and Khulna reported two deaths, Rajshahi one, and Malda none. Of the total number of deaths from this disease, 5,652 were among children, of whom 1,642 were under one year. The whole subject will be reviewed at length in dealing with the Vaccination Report.

Fever.

14. As is always the case, fever was the principal cause of mortality registered in the Province throughout the year. The total number of deaths recorded was 1,799,833, or 25·32 per thousand of population, against 1,477,288, or 20·78 in 1893, and an average of 16·83 in the ten years 1884—1893. The following statement compares the death rate of 1894 with the death-rate of 1893, and with the average rate for the ten years 1884—1893:—

Number.	Districts in order of mortality in 1894.	Ratio per 1,000 of population of—			Increase or decrease as compared with 1893.	Increase or decrease as compared with 1884—93	Districts in order of average mortality for the years 1884—93.	Average death-rate, 1884—93.
		1894.	1893.	Ten years, 1884—93 (average).				
1	2	3	4	5	6	7	8	9
1	Shahabad	38·23	26·66	20·47	11·57I	17·76I	Rajshahi	29·10
2	Monghyr	36·26	22·10	22·33	14·16I	13·93I	Jalpaiguri	25·64
3	Dinajpur	34·41	29·41	25·33	5·00I	9·08I	Dinajpur	25·38

	Average for the Province	25·32	20·78	16·83	4·54I	8·49I		16·83

NOTE.—The districts printed in italics are those included in the "unhealthy tract" described in Appendix VI, page cxxxviii.

The striking point is the high mortality of the Bihar districts, which represents a marked increase in relation to the death-rate of last year, and still more to the average mortality of the preceding ten years. This latter figure is no doubt somewhat understated by reason of defective registration, but this cause in so long a period has probably affected most districts to much the same extent, and may therefore be disregarded for purposes of comparison. Taking Bihar as a whole, the mortality of the year from fever was 30·66 as compared with 21·44 in 1893 and 19·09 in the five years 1889—1893. The corresponding figures for Bengal Proper are 23·12 for 1894; 21·97 for 1893, and 19·89 for 1889—1893. It is not easy to gather from the report precisely what hypothesis the Sanitary Commissioner inclines to adopt in explanation of this rise in fever mortality. In one place he quotes with approval the remark of the Civil Surgeon of Patna that the excessive late rains were the probable cause of the large increase in malarial fevers; while in the next paragraph further extracts are cited to show that the increase was due to impeded drainage and irrigation. It is likely enough, though it has not yet been proved to be the case, that the excessive use of canal water irrigation may affect the healthiness of certain areas in Shahabad, but the same cause is appealed to by the Civil Surgeon of Saran where the area irrigated by canals amounts to the minute figure of 1,568 acres in 1893-94, and 3,560 acres in 1892-93. Embankments of rivers again, where they raise the water level above the protected country, may have a similar effect, but whatever the operation of this factor may be, it must be uniform from year to year, and cannot reasonably be appealed to for the purpose of explaining variations taking place from one year to another. As for the heavy rains in the autumn of 1894, it is notorious that malaria is a slow acting cause, and excessive rains in the months of October and November of one year could hardly affect the fever mortality of that year. While so little is known about the origin of malaria, speculation as to the reasons of increased fever mortality can hardly fail to be futile. All that can be said is that throughout Bengal fever was extremely prevalent, and that the mortality was highest in Bihar. This may have been due to excessive rainfall in the autumn of 1893, but cannot have been due to the heavy rains of October and November 1894.

The following registering circles show a death-rate in excess of 40 per thousand :—

District.	Circle.	Death-rate.
Darjeeling ...	Siliguri ...	... 55·57
Rajshahi ...	Godagari ...	... 43·05
Jalpaiguri ...	Salbari ...	... 44 11
	Alipore ...	... 42·43
Shahabad ...	Jagdispur Town ...	... 51·46
	Buxar ...	... 44·59
	Mohanea ...	... 43·96
	Buxar Town ...	... 43·33
	Kharghar ...	... 41·10
	Dumraon ...	... 40·02
Muzaffarpur ...	Mahuwa ...	... 41·88
	Hajipur ...	... 40·52
Darbhanga ...	Dalsingsarai ...	... 41·08
	Nagarbasti ...	... 40·36
	Samastipur ...	... 40·02
Monghyr ...	Tegra ...	... 48·18
	Jamalpur ...	... 46·55
	Surajgarh ...	... 41·98
	Begusarai ...	... 41·83
Hazaribagh ...	Gawan ...	... 41·14
Lohardaga ...	Toto ...	... 45·04
Burdwan ...	*Dainhat Town* ...	... 46·85
Nadia ...	*Santipur* ...	... 42·63
	Birnagar Town ...	... 40·63
Murshidabad ...	*Assanpur* ...	... 46·80
	Manullabazar ...	... 43·23
	Gorabazar ...	... 42·93
Jessore ...	*Bangaon* ...	... 42·31
	Gaighata ...	... 41·24

The areas shown in italics are situated within the "unhealthy tract" already referred to. It is curious, however, to observe that Assanpur, Manulla...

zar, Gorabazar and Bangaon which are singled out by Dr. Gregg as peculiarly liable to malarial fever, show lower death rates both from fever and from all causes in the unhealthy year 1894, than in the comparatively healthy year 1893.

In the divisions of Dacca, Chittagong, and Orissa no registering circle recorded a death-rate of 40 per thousand. In Northern Bengal, taken as a whole, the fever mortality was 29·86, and all along the base of the Himalayas the death-rate from fever was high, the maximum (55·57) being attained in the Darjeeling Terai (Siliguri registering circle), which showed a general death-rate of 64·67 per thousand, while the Kurseong circle showed 31·07, the Darjeeling rural circle 35·37, and Darjeeling town 19·79. Efforts are being made by the Deputy Commissioner, Mr. R. T. Greer, to alleviate this inevitable evil. A new outdoor dispensary was opened in September 1894 at Naxalbari, a large village in the most unhealthy part of the Terai, and eleven centres have been started in the fever-stricken portions of the district for the sale of cheap quinine It seems probable that the increased death-rate recorded in this part of Bengal, is due partly to the improvement in registration effected by the introduction of chaukidars, and partly to the influx of fresh settlers and labourers on tea-gardens, who are more susceptible to the local fever than the indigenous population.

Mortality from other causes.

15. The total number of deaths from dysentery and diarrhœa during the year was 58,812, or ·82 per thousand of population, against 41,150 or ·57 per mille in 1895. Darjeeling, returned the highest death-rate (6·13), and was followed by Calcutta (4·60), Howrah (4·27), Balasore (3.80) and Puri (3·77). The same four districts headed the list in 1893. The death-rate rose in Urban areas from 2·98 to 3·84, and in rural circles from ·45 to ·67. Deaths from injury during 1894 numbered 30,715, or ·43 per mille, against 31,311, or ·44 per mille, in the previous year. The total number of deaths from causes other than cholera, small-pox, fever, dysentery and diarrhœa, and injury was 345,182, or 4·85 per mille, during the year, as compared with 314,207, or 4·42, in the previous year.

Expenditure on urban sanitation.

16. The following table shows the total expenditure incurred by municipalities for sanitary purposes during the year :—

Heads of Expenditure.	Total expenditure.		Difference.	
	1893.	1894.	Increase.	Decrease.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
On conservancy, including latrine ...	3,79,699	4,06,030	26,331	.....
Ditto establishment ...	3,81,946	3,91,943	9,997	.....
On drainage	1,83,190	2,74,218	91,028	.....
„ water-supply	2,14,516	4,28,421	2,13,905	.....
„ disposal of the dead ...	6,613	7,380	767	.....
„ market and slaughter-houses ...	21,818	15,356	.....	6,462
„ vaccination	18,908	18,568	.....	340
„ treatment of sick	2,62,426	3,07,865	45,439	.....
„ other sanitary works.	1,44,844	2,37,045	92,201	.....
Total ...	16,13,960	20,86,826	4,79,668	6,802
On construction, maintenance, and repairs of roads.	5,00,882	5,03,881	2,999	.....
Total including roads ...	21,14,842	25,90,707	4,82,667	6,802
Net increase ...	.....	.....	4,75,865	.....

As the subheads of this statement do not correspond with those of Form III annexed to the annual Resolution on the Municipal Reports, it is difficult

to say exactly what value should be attached to them. The accounts of the municipalities are kept for the financial year, and the attempt to draw up for the purposes of the Sanitary Commissioner's report, special statistics dealing with the calendar year, must inevitably lead to many mistakes and misunderstandings. The only course which will guarantee the presentation of correct figures seems to be to base this section of the report upon the last financial year, and to make no attempt to correlate the statistics with the mortality. In no case is it likely that expenditure on sanitary objects incurred during 1894, could produce any appreciable effect on the mortality of that year; while such expenditure incurred during the financial year 1893-94 might conceivably bring about an improvement which would make itself apparent during the calendar year 1894. For purposes of comparison therefore, nothing will be lost, while there will be gained the great advantage of knowing that the figures are correct. The Sanitary Commissioner should report specially on this suggestion.

The statement in paragraph 68 of Dr. Gregg's report, purporting to show the proportion of municipal income spent by each municipality on original and annually recurring sanitary works, confuses expenditure met from Capital with expenditure from Revenue, so that the figures do not lead up to the conclusion aimed at. The town of Arrah, which heads the list, as having devoted 77·73 per cent. of its municipal income to original works, in reality took a large loan from Government for the construction of its water-works. It is therefore misleading to quote Arrah as the municipality which has devoted the largest percentage of its income to sanitary works of an original nature. The value of the new statement included in paragraph 71 is greatly reduced by the doubts that must be felt as to the accuracy of the average mortality entered in column 6 In every case the figures of column 6 are based wholly or in part on statistics collected during the years when registration was conducted by municipal agencies, and was shown to be quite untrustworthy. It is, moreover, not clear how the average entered in column 5 is calculated.

Urban and rural sanitation.

17. Appendix V attached to the report contains a list showing the improvements carried out in towns and rural areas in Bengal during the year by District Boards, municipalities, and private individuals. The improvements effected were the provision of filtered water, the sinking, excavation and cleaning out of wells and tanks, the construction of urinals and latrines, and the construction and cleaning out of surface drains, &c. The total cost of the works undertaken and completed by District Boards and municipalities during 1894 is stated at Rs. 3,86,051, against Rs. 2,17,729 in 1893, while that of those in progress in towns is estimated at Rs. 93,451, against Rs. 3,79,196 in the previous year. It is impossible to check these statistics, and Dr. Gregg himself qualifies them by the statement "as far as the figures have been supplied." It is satisfactory to hear that the District Board of Backergunge is setting aside Rs. 10,000 a year for digging new tanks, and that the District Board of Burdwan proposes to undertake the drainage of a large number of villages in the unhealthy thana of Parbasthali. The cost of works carried out by private individuals during the year was Rs. 2,51,453, against Rs. 3,69,889 in 1893. These figures contradict the too sanguine conclusions put forward by the Sanitary Commissioner in paragraph 1 of his report as to the increased number of wells and tanks. With regard to the important question of the disposal of night-soil, the Lieutenant-Governor trusts that the Sanitary Commissioner may be justified in thinking that considerable improvement has taken place in the manner in which night-soil is trenched. Sir Charles Elliott's own experience leads him to entertain doubts on this point. Reports have lately been received of a very distressing character regarding the condition of some of the trenching grounds in the neighbourhood of Calcutta.

The Sanitary Board.

18. The Sanitary Board transacted a large amount of business during the year, and in particular the following important preliminary estimates have passed through their hands:—

(1) A drainage scheme for the Hooghly Municipality, estimated to cost Rs. 1,00,000;

(2) a scheme for supply of filtered water to the Berhampur Municipality, estimated to cost Rs. 2,25,000; and

(3) schemes for the supply of filtered water to the town of Midnapore, estimated to cost Rs. 4,10,000 if the supply be at the rate of 20 gallons per head per diem, or Rs. 2,90,000 if the supply be fixed at 10 gallons.

Of the above schemes, the second ought to be carried out without much difficulty, as the Maharani Surnamoyee, C.I., has undertaken to pay for the entire cost of the scheme, on condition that it does not exceed Rs. 2,21,000. The preparation of the detailed drawings, however, has been postponed until the Board are satisfied that the river Bhagirathi will be a suitable source of supply for the scheme, and this cannot be done until the quality and quantity of water has been tested when the river is at its lowest level. The Midnapore scheme was inspected by the Lieutenant-Governor in February last, and is a promising project: the cost of water-supply per head of population will be exceptionally low if the bottom of the proposed reservoir is found capable of retaining water. This question will be decided by the results of the experiment now being carried on.

Other projects which came under the Board's consideration were those for the supply of filtered water to the municipalities of Cossipore-Chitpur and Maniktola (since completed), for extending the water-supply of Bhagalpur, for the provision of settling tanks in Darjeeling (since completed), for a drainage scheme for Comilla, and for damming the river Bhairab at Jessore to form a lake. The principal work of the Sanitary Engineer has been the preparation of the plans and estimtes for the Howrah water-works. This important project is now well in hand, and it is believed that the work will be completed during the current year.

Surveys for sanitary works were made in the municipalities of Howrah, Ranaghat, Kushtia, Rajpur, Gaya, Kalna, Nadia, Santipur, and Kumarkhali, towards which more or less help has been given by the Sanitary Board. Other municipalities have applied for the services of trained surveyors, but the Sanitary Engineer has not been able to recommend suitable men in all cases, and improvements of this class are delayed for want of competent candidates for employment. Good hopes are entertained of procuring an effective water-supply for Gaya from wells sunk in the bed of the river, but the scheme is as yet only in its initial stage. The thanks of the Lieutenant-Governor are due to the President and Members of the Board, and to the Sanitary Engineer, for the useful work done by them during the year.

Inspections.

19. Brigade-Surgeon Lieutenant-Colonel Gregg, who was in charge of the department throughout the year, spent 155 days on tour during the year, which is less by 25 days than the prescribed period. During this time he inspected 32 municipalities and attended to various sanitary questions. In the Metropolitan and Eastern Bengal Circles, Drs. Moir and Oldham spent 181 days on tour; the officers in charge of the Western Circle were out for 192 days; and Dr. Deare, who acted as Deputy Sanitary Commissioner of the Northern Bengal Circle, and also held charge of the important Vaccination Depôt at Darjeeling, made a tour of 202 days.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Govt. of Bengal.

RESOLUTION ON THE ANNUAL REPORT ON EMIGRATION FROM THE PORT OF CALCUTTA TO BRITISH AND FOREIGN COLONIES FOR 1894.

GENERAL DEPARTMENT—EMIGRATION.

Darjeeling, the 25th June 1895.

RESOLUTION—No. 188T.G.

READ—

The Annual Report on Emigration from the Port of Calcutta to British and Foreign Colonies for the year 1894.

Dr. R. Macleod held the appointment of Protector of Emigrants from the commencement of the year up to the 3rd April, when he proceeded on furlough for eight months; he resumed charge of the office on the 8th December, Surgeon-Major E. Dobson having officiated for him in the interval. The report was punctually submitted. As usual, it is illustrated with two maps, which are intended to show in different colours—one the districts in which emigrants were registered, and the other the districts in which they were born. But by an unfortunate error incorrect figures have been used for the district population, so that both maps are misleading.

All things considered, the Lieutenant-Governor is of opinion that these two maps, even were they correct, would not add materially to the value of the report, and directs, therefore, that they need not be furnished in future years.

Administrative measures.

2. The most important amendment made during the year in the rules framed under Act XXI of 1883, related to the storage of water which is dealt with in rule 113. In the rules published in 1886, the storage of water in the after-compartments of an emigrant ship (which form part of the hull of the vessel, as opposed to the hold) was permitted subject to certain conditions. Subsequently it was decided to withdraw this permission, as it was feared that the water might be rendered brackish by the leakage of the salt water. But before these orders were enforced, the question was re-opened, and it was decided during the year under review that the storage of water in such compartments should be permitted, provided, among other things, that they are divided by water-tight bulkheads into three separate divisions of a capacity not exceeding 3,000 gallons each. A notification to this effect was published on the 18th May 1894.

In addition to this, certain of the forms prescribed by the rules were amended; in one case, in order to facilitate enquiries for heirs to vacant estates of deceased emigrants by ensuring the registration of the residence of the next-of-kin; and secondly, in order to record, among the descriptive particulars of each emigrant embarked for any colony, the nature of his occupation in India.

Requisitions and despatch of labourers.

3. Seven agencies—six British and one Dutch—were engaged in 1894 in collecting and despatching labourers to the colonies; in the previous year the number had been eight, but this year no emigrants were sent to St. Lucia. The number of adult labourers indented for showed a large increase of 4,128 compared with the previous year, the figures for the two years being 10,510 and 14,638 respectively; the increase was shared by all colonies, except St. Lucia :—

Name of Colony.	1893.		1894.	
	Indent.	Supply.	Indent.	Supply.
1	2	3	4	5
Demerara	5,450	4,959½	6,675	6,783
Trinidad	1,800	1,807	3,000	2,937½
St. Lucia	150	150	Nil.	Nil.
Jamaica	472	469½	624	674
Mauritius	465	350	470	468
Natal	361	547½	1,700	1,816
Fiji	700	750	950	1,034
Surinam	1,112	1,034½	1,219	1,152½

The supply exceeded the demand in every case except in those of Trinidad (62½), Mauritius (2), and Surinam (66⅔). The deficiency of the last-named colony was made good in the shipment of January 1895. No emigrants were required by the colonies of Nevis, St. Kitts, St. Lucia, St. Vincent, Grenada, nor by the French colonies.

Terms of engagement of intending emigrants.

4. The terms of engagement of intending emigrants were the same as in the previous year. Certain changes were proposed and agreed to in regard to the terms offered to emigrants to Demerara and Trinidad, but it was decided not to give effect to them until the season of 1895-96.

Recruiting operations.

5. The number of licenses granted to recruiters rose from 866 to 1,023 in the year under review, being an increase of 157. It was found necessary to cancel 6 of the licenses during the year on account of the misconduct or unfitness of the recruiters.

The number of intending emigrants registered was 26,707, so that, notwithstanding the increase in the number of recruiters, the average number of emigrants obtained by each recruiter rose from 17 in 1893 to 26. Of the total number, 26,707, 2,508, or 9·39 per cent., were registered in Bengal, 3,712, or 13·89 per cent., in Bihar, 14,167, or 53·04 per cent., in North-Western Provinces, and 6,320, or 23·66 per cent., in Oudh, the percentages in the previous year being, respectively, Bengal 16·98, Bihar 14·13, North-Western Provinces 49·60, and Oudh 19·28. The largest number of registrations were made in Faizabad (3,088), followed by Benares (2,787), Cawnpore (2,359), Allahabad (2,257), 24-Parganas (2,005), and Shahabad (1,917).

Classifying the persons registered by the locality of their birth, we find that only 12·4 per cent. of the whole are residents of Bengal and Bihar, 50·7 per cent. of North-Western Provinces, and 33·35 per cent. of Oudh, the remaining 3·5 per cent. being natives of other provinces. Taking individual districts, Basti supplies the largest number of emigrants, viz. 2,693, followed by Gonda and Azamgarh; Shahabad stands fourth with 1,500. None of the 2,482 persons registered in the 24-Parganas, in Calcutta, Burdwan or Howrah appear to have been residents of those districts.

History of intending emigrants subsequent to registration.

6. Besides the 26,707 emigrants registered during the year, there were 380 remaining in the sub-depôts from the previous year, so that in all there were 27,087 to be accounted for. Of this number 3,181, or 11·74 per cent, were rejected as unfit before despatch to the Calcutta depôts. Others, numbering 1,945, died, deserted or were otherwise accounted for before starting on the journey to the depôts: 927, or 3·4 per cent., were unaccounted for, 400 remained at the sub-depôts, so that 20,634 were despatched: 3 were born on the journey, and deducting the casualties on the road, the number which actually reached the depôts in Calcutta was 20,471, or 75·5 per cent. of the original number.

The total depôt population of the year was 21,181, which represents the number who arrived there during the year, plus those pending from 1893, born in the depôts, &c. Of this number 1,602, or 7·56 per cent., were rejected at the depôts as unfit, 2,232 died, deserted or failed to proceed for other reasons, 15,924, or 75·18 per cent., were despatched to the colonies, and 1,423 were in the depôts at the close of the year. The percentage of emigrants ultimately despatched to the colonies on the number registered this year, or pending from last, was 58·78, compared with 70·52 in the previous year.

This unsatisfactory result points to injudicious and perhaps dishonest recruiting in the first place and inefficient supervision in the second place. It is the most noticeable feature in the operations of the year—a feature that causes the Lieutenant-Governor the more regret in that in previous years he has drawn attention to similar results only to find that the evil has increased rather than diminished. At a rough calculation, it took 27,000 recruits to supply 16,000 emigrants. These figures indicate not only waste of money, but also distress and discomfort among the rejected recruits, involving unsettlement and breaking up of domestic ties to no purpose. The remedy lies in more frequent inspections of the sub-depôts in the mufassal, in closer supervision over the work of the recruiters, and in devising some method of punishing recruiters for registering unsuitable or recusant coolies.

An examination of the detailed figures shows that, of the total number of registered emigrants, 18·92 per cent. were rejected before leaving the sub-depôt for their destination in Calcutta, and 14·15 per cent. were rejected or unable to proceed after their arrival at the depôts, the corresponding figures for the previous year being 13·86 and 12·80 per cent., respectively. If there are to be rejections, the earlier they take place the better, and the figures for this year (viz. 3,181 such rejections, as against 1,464 in 1,893) contain this one satisfactory element, that they indicate a more careful inspection of emigrants at the sub-depôts.

The number of registered emigrants unaccounted for has risen from 345 or 2·28 per cent. to 927 or 3·4 in the present year. The hope expressed in the Resolution on the work of 1893, that the introduction of registers in the sub-depôts would effect an improvement in this respect, has not been realized. It is obvious that there is always liable to be a small number of coolies unaccounted for, representing those who, having been registered before the close of the year under report, fail to reach any sub-depôt until the following year has commenced; but that there should be any large number points to a lack of organization and of hold over the recruiters and the managers of the sub-depôts.

Comparison between the recruiting for the colonies and the labour districts, in certain districts.

7. A statement is given in paragraph 21 of the report comparing the numbers registered in certain districts of recruitment in the Lower Provinces for despatch to the Assam labour districts and to the colonies, respectively. The conclusion arrived at is, that there is little or no competition between the recruiting agents of the two labour markets. But this conclusion is vitiated by the fact that no account is taken of free emigration, which supplies the greater portion of the labour to Assam, and for which, as far as the district of origin is concerned, no exact figures are available.

Sanitation and management of the depôts.

8. Surgeon-Major A. W. D. Leahy, the Medical Inspector of Emigrants, Calcutta, has nothing but praise for the sanitary arrangements and management of the depôts. But the record of sickness and mortality among the coolies was not so favourable as in 1893, as can be seen from the following figures:—

Year.	Total strength.	Admissions into hospital.	Percentage.	Deaths.	Percentage.
1	2	3	4	5	6
1893 ...	13,220	359	2·71	14	·10
1894 ...	21,181	824	3·89	109	·51

The exceptional sickness and mortality is ascribed by the Medical Inspector generally to the greater unhealthiness of the past year up-country, and particularly to the excessive number of weakly children admitted into the depôts. The statistics of mortality in the jails and amongst the general population show that the year was, indeed, unhealthy, but not to such an extent as to warrant the very great rise that occurred in the death-rate in the depôts. The mortality among infants was very serious, 39 having died against 26 born in the depôts. The chief causes of sickness were malarial fevers, 285 cases and 15 deaths; dysentery 113 cases and 16 deaths; chest affections 153 cases and 40 deaths. There were 8 cases of cholera only, of which 6 ended fatally.

Embarkation of emigrants

9. The number of emigrants embarked for the colonies during the year under report was 15,924 against 10,674 in 1893. The emigrants were conveyed in 28 vessels, of which 6 were steamers and 22 sailing ships. The longest time occupied on any voyage was by the ship *Arno*, which, with 711 emigrants on board, took 120 days to reach Jamaica. Reports of arrival have been received from 22 ships only up to the present. The aggregate mortality among the coolies on those ships was 210, and the percentage 1·96 compared with 129 and 1·2 respectively in the previous year. There were no deaths on board two of the steamers bound respectively for Mauritius and Natal. In the case of the ship *Sheila* bound for Demerara, the death-rate reached 4·38 per cent., chiefly owing to an outbreak of

measles, which caused 13 or more than half the number of deaths. If the emigrants were healthy when they started, it is not clear how this contagious disease broke out.

10. The attention of the Protector of Emigrants is invited to the return received on the 14th June from the Board of Revenue, showing the quantity of lime-juice taken on board for the use of emigrants. The rule is that for voyages west of the Cape the supply should be 40 gallons per hundred emigrants; east of the Cape 15 gallons per hundred. Out of 18 sailing vessels which left Calcutta between April and December, nine took less than the prescribed quantity. The worst cases were the following:—

Name of Ship.	Destination.	Number of statutory adults.	Amount of lime-juice that ought to be taken in gallons.	Amount actually taken in gallons.	Deficiency.
1	2	3	4	5	6
"Jura"	Demerara ...	515	206	92	114
"Ems"	Surinam ...	652	260	Nil	260
"Bann"	Demerara	555	222	Nil	222

It is possible that these vessels had already a sufficient stock on board, but it seems hardly likely. It is the Protector's duty to see to this and to ensure that the supply is not only sufficiently large, but sufficiently fresh.

Returned emigrants.

11. In 1894, 3,804 emigrants returned from the several colonies, as compared with 5,173 in the previous year. Except in the case of Guadeloupe and Bourbon, to which no emigrants were shipped, all the colonies returned a smaller number of emigrants than they received during the year. From Fiji, however, 1,039 returned as against 1,082 despatched. Five sailing-ships and ten steamers were engaged in bringing back the returned emigrants. The aggregate mortality among them was 82, or a percentage of 2·15 compared with 88 or 1·70 in 1893. The savings brought home aggregated Rs. 5,94,965, yielding an average of Rs. 156 per head, corresponding figures in the previous year being Rs. 7,21,986 and Rs. 139. Those who returned from Natal were, as in the previous year, the most fortunate as regards their average savings, which amounted to the considerable sum of Rs. 231-13-3 per head. Mauritius in both years has proved the least profitable field for emigrants, the average savings amounting only to Rs. 25-1-6 in 1894 and Rs. 16-13-0 in 1893.

Administration of estates.

12. During the year 498 estates, valued at Rs. 83,093, came under administration. Of this number, 258 estates, valued at Rs. 29,247, were finally administered 80 of these, valued at Rs. 1,587, lapsing to Government in the absence of heirs. The heirs were traced of the remaining 178 estates, which were finally administered and of 52 others, and a sum of Rs. 52,814 was paid or was in course of payment in respect of them. Enquiry was still proceeding in regard the remaining 188 estates.

Compared with the previous year, there was a decrease of 28 in the number of estates administered, but an increase of Rs. 5,892 in their value. Prompt enquiries are said to be instituted by the Colonial authorities of Demerara, Natal and Fiji, on the decease of an emigrant, but His Honour regrets to learn that this is not the case in Mauritius, where years are sometimes allowed to elapse before the Protector of Emigrants is communicated with. The attention of the Government of India will be drawn to this neglect with a view to its being remedied. The Protector draws attention to the small number of estates that have come under administration from the Colony of Trinidad. In the past five years there have been only 17 such estates in that Colony, while in the same period there have been 540 in British Guiana; in fact, estimating the male adult immigrant population to be 25,000 and 82,000 in each

Colony, respectively, there is one estate to every 1,470 such immigrants in the former colony, and one estate to every 152 in the latter. This result clearly calls for some enquiries. The attention of the North-Western Provinces Government will be invited to the Protector's remarks on the want of village directories for ten districts in Oudh, as these have been found so useful in helping to trace the villages of residence of emigrants.

13. Owing to the large increase in the number of emigrants despatched, there was a corresponding increase in the receipts, which are derived solely from the fee of Rs. 3 charged for each emigrant. The total reached Rs. 48,456, or Rs. 18,186 in excess of that of the previous year. The expenditure was only Rs. 31,794-14, showing a petty increase over that of 1893. This total includes only the pay of Government officers, *i. e.*, the Protector of Emigrants and the medical officers, and the cost of office establishment and of fees paid to registering clerks. Nothing is known of the cost of emigration to the colonies, which includes the pay of the Agents, the cost of recruiting, and of the voyage, and many other items.

Financial.

The year closed with a credit balance of Rs. 16,661-2. The Protector of Emigrants suggests that in view of the large balance, it may be possible to reduce the amount of the fee, but the fluctuations in the requisitions for labourers in past years show that the result of one year is not sufficient to justify any action being taken.

14. The Lieutenant-Governor is pleased to record his satisfaction with some branches of the working of the department during the year. The large requisitions from the colonies were fully and successfully met without increased expenditure, but he cannot pass over without particular comment the great number of rejections that occur among the registered coolies. His Honour trusts that this question will receive the personal attention of the Protector and of the Emigration Agents during the year.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

FIRST FORECAST OF THE JUTE CROP IN BENGAL FOR 1895.

THE following is published for general information.

REV. & AGRI. DEPTS., C. E. BUCKLAND,
Calcutta, the 2nd July 1895. *Secy. to the Govt. of Bengal.*

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

First Forecast of the Jute Crop in Bengal for season 1895 (*to the middle of June*).

Returns have been received from 26 districts in which jute is grown in these provinces, viz., from Burdwan, Midnapore, Hooghly, all districts of the Presidency, Rajshahi, and Dacca Divisions, Tippera, Noakhali, Bhagalpur, Purnea, Malda, Cuttack, and Balasore.

1. *Season.*—The rainfall from January to March was deficient, but the deficiency does not appear to have impeded cultivation in the more important jute-growing districts. Throughout the greater part of April rainfall was well distributed, and was generally above the normal. In the early part of the month of May rainfall was more copious over the whole Province than is usual at the beginning of the month. During the last half of May heavy rain fell in East Bengal, but in other districts there was less than the average fall. For the whole month of May Eastern Bengal has received more than the normal, while South-West Bengal, part of Northern Bengal, and Orissa received less than the normal fall. In the first half of June the rainfall was light, but fairly general.

2. *Area cultivated.*—The estimates of normal area cultivated with jute and area cultivated in 1894, as reported in the Final Report of 1894, have been modified in the present return by the Collectors of the 24-Parganas, Bogra and Bhagalpur, hence the difference between the normal and last year's areas under jute as now reported and as returned in the final report on the jute crop of Bengal for 1894 (this Department's note, dated 29th August 1894). The total area in Bengal sown with jute during the current year appears from the district returns appended to this note to amount to 2,268,200 acres against 2,264,300 acres sown in the preceding year. The differences shown in the District Officers' returns between this year's cultivation and last year's are inappreciable; and the areas cultivated are in fact probably about the same.

The six plains districts of the Rajshahi Division have about 2½ lakhs of acres of jute cultivation; the Dacca, Faridpur and Mymensingh districts have also over 8½ lakhs of acres; Tippera has over 2¼ lakhs of acres; and Purnea returns ¾ths of a lakh of acre. These 11 districts together have 20 lakhs of acres out of the whole 22½ lakhs of acres returned.

3. *Character of the crop.*—Mymensingh, which is the largest jute-growing district, and alone returns an area equal nearly to one-fourth of the whole area under jute, shows a 16-anna crop. Rangpur and Tippera, which have the next largest areas under jute, return 18-anna crops. For the eight districts which stand next in area under jute an outturn of 13 annas to 18 annas is estimated. In the principal jute-growing districts the outturn is estimated to be either equal to or better than that of the crop of 1894. On the whole it appears to be safe to estimate the outturn of the crop of 1895 at 17 annas.

4. *Estimated exports.*—If the crop turns out to be 17 annas, as estimated, the amount available for export, including cuttings and rejections, during the jute season of 1895-96, will probably be at least 36 lakhs of bales, as in the export season which is now drawing to a close.

W. C. MACPHERSON,
Director of the Dept. of Land Records and Agriculture, Bengal.

CALCUTTA,
The 29th June 1895.

First Forecast of the Jute crop in Bengal for 1895 (*to the* 15*th June* 1895.)

Division.	District.	Approximate normal area under jute.	Approximate area sown last year (1894).	Estimated area sown this year (1895).	Taking 16 annas to represent the average outturn per acre, how many annas represented outturn last year (1894)?	Taking 16 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1895)?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
		Acres.	Acres.	Acres.	Annas	Annas.		
Burdwan ...	Burdwan ...	11,100	10,900	10,900	11¾	8	In the Sadar and Kalna sub-divisions, this year's outturn will be less than last year's for want of timely rainfall. The low estimate of outturn (10 annas) in the Katwa and Raniganj sub-divisions is due to the late rainfall, for which cultivation could not be commenced in time.	
	Midnapore ...	20,900	10,800	6,100	9¼	10½	There being no rain in time, the area sown with jute crop falls much below that sown last year. As there has been some rain lately, a larger area is likely to be brought under cultivation. The outturn is likely to be the same as last year. In Tamluk it is likely to be better owing to good rain in May.	
	Hooghly ...	14,300	12,500	12,000	10	8	For want of periodical rains, the area cultivated is less than in the previous year. The growth of the young plant is also retarded for want of rain. Hence the outturn is also expected to be comparatively low. Serampore return was received incomplete. Hence the return is subject to revision.	
Presidency ...	24-Parganas ...	42,000	35,400	34,400	13	12	The difference between this year's area under jute and that of last year is due to the want of rain in the beginning of the season, and the fall in the price of jute. Owing to the continued want of rain, the yield of the jute crop is expected to be less than that of the last year.	The Collector has changed the estimate of normal area from 48,000 to 42,000 acres, as the former seemed to be excessive as compared with the areas sown last year and this year.
	Khulna ...	22,500	17,800	21,200	13½	14½	The increase in area is owing to the increase in area in the Satkhira sub-division, and it is owing to timely rains. The outturn for the above reason is expected to be a little better this year than last.	

Division.	District.	Approximate normal area under jute.	Approximate area sown last year (1894).	Estimated area sown this year (1895).	Taking 16 annas to represent the average outturn per acre, how many annas represented outturn last year (1894)?	Taking 16 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1895)?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
		Acres.	Acres.	Acres.	Annas.	Annas.		
Presidency—*concld.*	Nadia ...	47,000	47,600	44,000	14	13	There has been a decrease in the area sown this year in all the sub-divisions except in Ranaghat, owing to want of timely rainfall, which was so highly felt in thana Damurhuda in the Meherpur sub-division that there could be no sowing at all. Want of seed also stood in the way of sowing in thana Meherpur. The decrease in the estimated outturn is also due to the same cause.	
	Jessore ...	41,500	33,600	34,100	14	14	The area sown this year is a little more than that in the preceding year. This is due to the favourable rainfall in April and May 1895, and the high price fetched by jute, as compared with paddy.	
	Murshidabad	30,000	21,700	20,300	10	9	The decrease in area sown this year, as compared with the normal area, or the area sown last year, is owing to the want of timely rainfall. In consequence of drought, the outturn is estimated below normal and below last year's, but if it rains and no inundation occurs, the area cultivated will yield a good outturn.	
	Dinajpur ...	99,500	107,500	107,500	12	13	The increase in this year's outturn is due to the timely fall of rain in the district.	
	Rajshahi ...	104,500	105,200	103,300	14½	15½	As the flood was late and higher than normal, and the water did not subside for a long time, the cultivators could not sow more lands, hence there is a decrease in the area sown this year, as compared with the area sown last year. The plants suffered much for want of rain in March and April last, and hence the outturn is not expected on an average to be more than 15½ annas.	
	Rangpur ...	278,500	286,200	278,000	14	18	Seasonable rainfall up to date has greatly benefitted the growth of the plants, and the cultivators had time for timely weeding. A bumper outturn is expected if nothing unusual interferes.	

Rajshahi ...	Bogra	76,000	100,000	100,000	14	16	From experience gained of the district, and especially of the jute-producing portions of the district during my last year's tour, and from report received from different quarters, it appears that the normal area under jute cultivation in this district was last year not below 100,000 acres, and it was the same this year. Timely rainfall at the time of sowing, and when the plants were little larger, did well for a good outturn.	The Collector apparently misapprehends the term normal area.
	Pabna ...	180,900	174,500	175,500	14	17	The high price of jute has caused a slight increase of cultivation as compared with last year. Seasonable rain has caused the crop to grow well, and it appears at present that the outturn will be above the average.	Not high as compared with the prices of the two preceding seasons.
	Darjeeling (plains).	13,800	13,800	13,800	12	14	Better outturn is expected on account of seasonable rainfall.	
	Jalpaiguri ...	64,000	64,280	64,900	13½	13	Excessive rainfall during the early stages of cultivation has, it is feared, injured the plant to the extent of 3 annas.	
Dacca ...	Dacca	212,300	211,200	212,400	13	14	The increase in area sown this year, as compared with last year's area, is due to the fact that jute proved a profitable crop to the cultivators last year. Owing to favourable weather the outturn is expected to be good.	
	Faridpur ...	85,000	85,000	85,000	16	16	Owing to the timely rainfall, the outturn is expected to be the same as last year.	
	Backergunge	6,400	6,400	6,400	12	12		
	Mymensingh	570,000	559,100	558,000	15	16	There has been seasonable rain, and the crop is thriving. It is expected that this year's outturn will be better than last year's. The slight decrease in this year's area is probably due to the low profits derived from the sale of jute last year.	
Chittagong ...	Tippera ...	225,000	212,000	231,200	18	18	The increase in this year's area is due to the fact that there were bumper rice crops last year, and as there is plenty of rice in stock, some land last year under rice has this year been put under jute.	
	Noakhali ...	9,500	9,500	9,500	13	14	Owing to timely rainfall, the outturn is expected to be better than last year.	

Division.	District.	Approximate normal area under jute.	Approximate area sown last year (1894).	Estimated area sown this year (1895).	Taking 16 annas to represent the average outturn per acre, how many annas represented outturn last year (1894)?	Taking 16 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1895)?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
		Acres.	Acres.	Acres.	Annas.	Annas.		
Bhagalpur ...	Bhagalpur ...	22,400	22,400	22,400	17	13	The delay in the rainfall has interfered with sowings and growth of plants already sown. If the rainfall is not favourable, the outturn will be worse than last year.	In columns 3, 4 and 6, the Collector has changed the figures entered in the final report on the jute crop of 1894.
	Purnea ...	62,200	75,000	75,000	16	16	The rainfall has been seasonable and sufficient. If this state of things continues, the outturn is expected to be 16 annas or more.	
	Malda ...	45,000	35,500	35,500	16	14	Owing to deficiency of rainfall, the area sown this year is less than the normal area, and the outturn is not expected to be more than 14 annas.	
Orissa ...	Cuttack ...	5,500	4,500	4,500	10	14	For want of sufficient rain, the sowing has been retarded. There is every probability of more area being sown, if there be sufficient rain. Prospect of outturn seems better. The figures in columns 5 and 7 are subject to change on completion of sowing.	
	Balasore ...	3,600	2,600	2,300	10	12	The decrease in area is due to the want of sufficient rains in some places at the time of sowing. The increase in the outturn is principally due to good rainfall in Bhadrak sub-division at the time of sowing. The decrease as compared with the normal outturn is due to scanty rains.	
	Total ...	2,301,900	2,264,300	2,268,200	16½(a)	17(a)	.....	(a) Estimated by this Department.

N.B.—Twenty annas represent a bumper crop, 16 annas an average crop, and 12 annas three-fourths of an average rop, and so on.

WEATHER AND CROP REPORT.

For the week ending the 1st July, 1895.

Burdwan.—Rainfall at Burdwan ·89. Weather stormy. More rain wanted. Cultivation of lands for *aman* rice continues. *Aus* rice doing well. Common rice sells from 10 to 21 seers a rupee.

Midnapore.—Rainfall at Sadar 1·19. Weather cloudy. Transplantation of paddy seedlings commenced. Indigo, sugarcane and *til* (sesamum) doing well. More rain required in Panskura. Common rice selling from 16 to 20 seers a rupee.

24-Parganas.—Rainfall at Sadar 2·06. Weather seasonable. Prospects of standing crops good. Sowing of *aman* paddy continues. Preparation of lands for transplanting seedlings is in progress. Condition of cattle good. Fodder and water sufficient. Rice sells at—

		Srs.	
Sadar	11 to 13		
Barasat	14	per rupee.	
Basirhat	19		
Diamond Harbour	15		

Murshidabad.—Rainfall ·43. Weather seasonable. Sowing of winter rice nearly finished. Prospects of standing crops good. Fodder available. Price of common rice 15 seers per rupee.

Khulna.—Rainfall at Khulna 2·48, Bagerhat ·55, Satkhira ·85. High winds with occasional rain. Preparation of lands for *aman* rice going on. Weeding of *aus* and jute continues. Prospects of crops good. Price of common rice 17 to 23 seers per rupee. Fodder and water sufficient.

Dinajpur.—Average rainfall ·35. Weather hot and cloudy. More rain wanted. Price of common rice 15 seers a rupee. Outbreak of cattle-disease reported from Thakurgaon. No complaint for fodder or drinking water.

Rangpur.—Average rainfall ·30. Weather hot and windy. *Aus* paddy is being harvested. Rain urgently wanted. Prospects favourable provided that rain falls. Rice selling from 10 to 15 seers a rupee.

Pabna.—Rainfall ·55. Weather hot and cloudy. Prospects of crops good. More rain wanted. Fodder and water sufficient.

Dacca.—Rainfall 1·17. Weather hot with rain at intervals. *Aus* rice is being harvested. Rain much wanted. Common rice selling from 12 to 19 seers per rupee. No cattle-disease.

Chittagong.—Rainfall 5·37. Weather sultry and hot. Cultivation and sowing retarded in places for want of rain. Water and fodder sufficient. Cattle-disease reported. Prices have slightly risen.

Patna.—Rainfall ·49. Paddy and *makai* are being sown; the latter has sprouted in places. *Marua* being transplanted in Bihar. Common rice selling at 17 to 18 seers per rupee.

Gaya.—Rainfall at Sadar 1·30, but only ·31 at Nawada, where *marua* and paddy seedlings are suffering; elsewhere the *bhadoi* crops are coming up. Prices about normal. Fodder and water ample.

Champaran.—Rainfall at Motihari 1·37. Prospects of crops fair. Common rice sells at 15½ seers a rupee. Fodder and water for cattle sufficient.

Darbhanga.—Rainfall ·06. More rain urgently wanted for all crops on the ground and also for *bhadoi* sowings. Common rice selling from 16½ to 18 seers per rupee. Fodder and water sufficient.

Bhagalpur.—Weather cloudy with occasional light showers. It is reported from Madhipura that the *bhadoi* crops are withering for want of rain, and in Supul the sowing has been retarded. Prospects are better in Sadar and Banka, but in these subdivisions the paddy seedlings have suffered for want of rain. Common rice sells at 17 seers 10 chitaks per rupee Fodder and water sufficient.

Purnea.—Rainfall 1·24. Prospects of *bhadoi* paddy and jute continue good. More rain is urgently wanted for transplantation of *aghani* paddy. Fodder and water sufficient. No cattle disease. Common rice sells from 16 to 22 seers a rupee.

Cuttack.—Rainfall 18·49. Sowing of paddy not completed. Lands sown are submerged in water in places on account of excessive rain and flood. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 25 seers per rupee.

Hazaribagh.—Weather seasonable. Sowings are in vigorous progress everywhere. Sugarcane doing well. Fodder and water sufficient. Common rice selling at 14 to 16 seers per rupee at head-quarters and 10 to 15 seers at Giridi.

General Summary.—The feature of the week was the unusually heavy rain in Orissa, and generally speaking the absence of heavy rain elsewhere. More rain is much wanted, especially in parts of Bihar and North Bengal, though the crops in the ground have not as yet suffered, and the cultivation of the *bhadoi* crops and winter rice continues. In Cuttack the lands sown with rice are submerged in places. *Aus* rice is being harvested in Rangpur and Dacca. An outbreak of cattle-disease is reported from Dinajpur; elsewhere the cattle are in good condition. The price of common rice continues steady.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 2nd July, 1895.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY THE 29TH OF JUNE 1895.

THE unusual distribution of rainfall which was noted as a prominent feature of the weather during the previous week ending on the 22nd, has continued during the one now under review. The irregularity is even more marked, and is due to a similar arrangement of pressure, viz., relatively low pressure in the north-west of the Bay which has caused the moist sea current to take a more westerly direction instead of over East and North Bengal. The low pressure which continued throughout the week over the north of the Bay, developed into a somewhat severe cyclonic storm during the last few days, and during the existence of this disturbance very heavy rain fell over the whole of Orissa.

On the 23rd, the first day of the week, a local but rather rapid fall of pressure over Orissa resulted in a shallow depression over the north of the Bay and the adjoining land. The depression moved slowly to the westward with a cyclonic circulation of light winds, and caused heavy rain and low temperature in Orissa during its passage. On the 24th the centre of the wind circulation was not far from Chaibassa, where pressure was lowest, but the depression had become very diffused, and rainfall was light even in Orissa. On the 25th there was a slow rise of pressure in Orissa and Chota Nagpur and a slow fall in other districts—changes which, though unimportant in themselves, appear to have led to the beginning of the cyclonic storm towards the end of the week. The immediate result was that the area of lowest pressure was again over the north-west angle of the Bay. Winds were again cyclonic over that area and easterly inland. The depression on the 25th was very slight, as defect at the coast stations in Arakan, Bengal, and Orissa was very little over ·05 inch, while in the south of the Bay and in the northern districts of Bengal the distribution was very nearly normal. During these days unusually fine weather prevailed over a great part of the province. The skies were lightly clouded, rainfall scattered, and temperature above the normal by about 2°.

On the 26th a fairly rapid fall of pressure prevailed in the east of the Bay, and led to defect of between ·1 inch and ·15 inch over the part of the Bay between Orissa and Arakan. The depression became more distinct, with its centre in the north-west angle, and cyclonic winds obtained over a considerable area, of moderate strength in the south of the Bay, but very light on its northern side. During the next two days it slowly changed its position, but steadily developed, and weather became squally over the greater part of the Bay. Wind remained south-westerly at Diamond Island, and increased daily in strength, the highest velocity being 20 miles an hour on the 27th and 28th. As the area of lowest pressure moved slowly to the north-westward, very heavy rain fell in Orissa. On the morning of the 27th, Puri reported nearly 8 inches and Cuttack 3 inches. On the 28th pressure fell rapidly at Saugor Island and Balasore, and the centre of the depression passed the coast line between these two stations some time during the day. The lowest readings of the barometer were under 29·2 inches, and the greatest defect was about a third of an inch. On the 29th the centre was near Chaibassa, moving rather rapidly towards the north-west.

While the depression was deepening in the north of the Bay, gradients became gradually steeper over Bengal. On the 26th the difference between the lowest and highest readings at Saugor Island and Jalpaiguri, respectively, was only ·08 inch. On the 27th it had increased to ·14 inch, on the 28th to ·27 inch, and on the 29th the difference between Chaibassa and Dhubri was about ·35 inch. This steady steepening of the gradient from north-east to south-west led to strong winds over the whole province. Rainfall was light in all districts except Orissa, Chota Nagpur and the adjacent part of South-West Bengal.

After the centre of the disturbance crossed the coast, strong southerly winds blew on the coast of Orissa and at Saugor Island. The squally weather, however, which followed the area of lowest pressure continued in the north-west angle for but a short time, as this pressure distribution recovered more rapidly than usual.

Pressure has been below the normal throughout the week in the southern districts, but there was a small excess in the north of the province during the early part. As the depression developed there was defect everywhere—greatest at some of the south-western stations, where it became as much as a third of an inch. Mean pressure is therefore below the normal at all stations by amounts varying from ·02 inch in the north of the province to ·15 inch at Cuttack.

Temperature has been low in Orissa and part of South-West Bengal and Chota Nagpur, but in the other districts, owing to the comparatively clear skies and scanty rainfall, there has been excess throughout the week. Mean defect for the whole of Orissa is 3°·6, for Chota Nagpur 2°·7, and for South-West Bengal nearly 1°. Elsewhere there is excess—of more than 1° in East Bengal and Bihar, and between 2° and 3° in North Bengal and Assam.

Rainfall.—Very heavy rain fell in Orissa on the first day of the week, and again from the 27th to the end of the week. In Chota Nagpur and the western half of South-West Bengal moderate amounts fell during the latter half of the week, while the disturbance existed. Elsewhere very little rain has fallen compared with what usually falls at this season of the year. The average fall in Orissa was 8·93 inches as compared with a normal

fall of 3·24 inches. Chota Nagpur received three quarters of an inch more than the normal, and all the other districts less. The defect in South-West Bengal was less than 1 inch, in Bihar 1·24 inches, East Bengal 2·58 inches, and North Bengal 3·46 inches.

The fall in North Bengal was very little over one-seventh part of the normal.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 29th of June 1895 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; p, passing temporary showers.

RESOLUTION ON THE ANNUAL REPORT ON INLAND EMIGRATION FOR THE YEAR 1894.

GENERAL DEPARTMENT—EMIGRATION—No. 2231.

Calcutta, the 8th July 1895.

RESOLUTION.

READ—

The Report of the Superintendent of Emigration, Calcutta, on Inland Emigration for the year 1894.

Dr. R. Macleod held the appointment of Superintendent of Emigration from the commencement of the year under review until the 3rd April, and again from the 8th December until the close of the year; Surgeon-Major E. Dobson officiated for him in the interval. The report, following the prescribed lines, traces the journey of each class of emigrants from the recruiting ground to the labour districts. As usual, there are two maps illustrating the districts in which the emigrants say they were born and those in which they were registered. Their assertions as to the district of origin are not of much weight, and the figures of the districts of registration are given on page 4 of the report. The work is practically confined to one district, that of the 24-Parganas, and, this being so, the maps are not required. They should therefore not be inserted in the report in future.

2. There are four distinct methods of recruitment recognised, namely :—

(1) By contractors licensed under section 12 of Act I of 1882;

(2) The local agents of the employers of labour, who have been specially

(3) By garden sardars who have been granted certificates by their employers under section 51 of the Act;

(4) The free emigration system, over which only a sanitary supervision is maintained under Act I (B.C.) of 1889.

Each system is separately treated in the following paragraphs.

3. *Contractors' emigrants.*—There were five licensed contractors during 1894, but two of these closed their business before the end of the year. All the depôts were situated in the suburbs of Calcutta. There were nineteen recruiters working under these contractors, and they registered 3,237 coolies. The figures of previous years, as entered in the margin, show how steadily this system of collecting labourers is decreasing; what survives of it is merely a fringe on the edge of the great system of free emigration. Of the 3,237 emigrants registered during the year, 3,073, or 94·9 per cent., were registered in the 24-Parganas though only three of these were natives of that, district. The rest of the labourers admitted into their depôts were originally recruited for the depôts of the free contractors established in Calcutta and the 24-Parganas. This constitutes one of the most noticeable features in the report.

	Number of recruiters.	Number of coolies.
1891	47	8,754
1892	31	4,712
1893	24	4,484
1894	19	3,237

5. Out of the whole number of licensed contractors' emigrants (3,237) registered, only 106 were, according to their own statement, residents of the districts in which their registration was effected. This, as the Superintendent correctly remarks, shows how extremely difficult, if not impossible, it must be for the registering officer to obtain correct particulars regarding an emigrant's caste, previous history, and district of origin; it supports the view steadily taken by this Government that registration is not a remedy for complaints about enticement and wrongful confinement, since it does not secure the identification of the emigrant.

The Chief Commissioner of Assam during the current year drew the attention of the Lieutenant-Governor to the frequency with which labourers are misdescribed in their contracts as regards their caste and native district, and enquired whether it would be possible to issue instructions to the effect that, when labourers appear to the registering officer or to the Superintendent of Emigration to be misdescribed as to their caste, age or native district, they shall not be registered or allowed to execute contracts under the Assam Labour and Emigration Act. His Honour, in reply, referred to such facts as are quoted above to show the difficulty of identification, doubted if any official could acquire such knowledge of the physical characteristics of castes and races as to justify him in pronouncing that an emigrant who asserts he is of one race or caste is really of another, and held that even if this were possible in the case of the Superintendent of Emigration at Dhubri, who makes the registration of emigrants a special business, it would be dangerous to give such powers to registering officers all over Bengal.

6. In ding one man who remained over from the previous year, 3,238 registered grants were accommodated in the sub-depôts in the mufassal: either before the start or on the journey, 29 of these were released or discharged, and 57 deserted, so that 3,152 arrived at the depôts in Calcutta, the total casualties on the journey having amounted to 2·62 per cent., as compared with 1·36 per cent. in the revious year. During their accommodation in the depôts there was a further uction of 178 or 5·48 per cent., owing to the discharge of 59 emigrants, th sertion of 110, and the deaths of 9; moreover, 64 were remaining in the depo the end of the year, so the number despatched to the labour districts was 3, 4. The diminution of numbers during the period of detention in the depôts was small during the year under report compared with 1893, the percentage be ng 5·48 as against 9·9; the percentage of sickness, too, (0·86) compares favo bly with that of the previous year (1·01), but the death-roll was heavier, ha g risen from three to nine. The Medical Inspector of Emigrants remarks t the amount of sickness was small, and that, of the nine deaths, five wer among children and infants, whose admission to the depôts in a weakly and ill-nourished condition can frequently not be avoided.

No coolies were r cted as medically unfit to proceed from the depôts:

four were released at Goalundo by the contractors or their representatives. Of the remainder, 1,564 arrived at their destination in Assam, having lost three by deaths and one by desertion on the way, and 1,429 reached Sylhet or Cachar with the loss of two deserters on the way.

Special Local Agents.

7. Certain of the local agents who represent the employers of labour and act for them in matters connected with emigration in the recruiting districts, are specially authorized by the Superintendent of Emigration, under section 62 of Act I of 1882, to recruit coolies, dealing direct with them without the intervention of garden sardars. Of this system the Superintendent writes:—"Doubtless the number of employers (of these special local agents) as well as of special local agents will increase yearly, in view of the fact that the latter reside in the districts of recruitment, and carry on their recruiting operations locally under the garden sardar system, and are not under such legal restraints as the licensed contractors."

Years.	Number of special local agents.	Number of coolies.
1	2	3
1890	4	596
1891	9	779
1892	7	3,317
1893	5	3,500
1894	13	3,921

The figures quoted in the margin show that in the last four years there has been a considerable increase in the number of coolies recruited by this method, and that the tendency to increase continues. The special danger which attends the system concerns the employers of labour rather than Government; it lies in the fact that the special local agents who are empowered to recruit, usually act also as mere 'local agent' to supervise coolies recruited by garden sardars, and the temptation to pass off the garden sardars' coolies as recruited by themselves in their capacity as 'special local agents' is very great, the profits being large and the risk of discovery small.

In last year's Resolution the Superintendent of Emigration was requested to distinguish special local agents' coolies from sardars' coolies, but he has been unable to give the figures separately for more than half the year, so that it will be necessary in this Resolution to deal with the two classes together after leaving the districts of recruitment. In future separate figures for the whole year must be submitted. Of the 3,921 emigrants registered by the special local agents, as many as 3,251 were registered in Manbhum.

Certificated garden sardars and coolies recruited by them.

8. There were 5,274 certificated garden sardars during the year under report, and 156 sardarnis, as compared with 4,762 sardars and 104 sardarnis in the previous year. The majority of these sardars, namely 4,007, conducted their operations under the supervision of local agents of the employers licensed under section 59 of the Act. One of the most noticeable features in this year's report is the very great decrease in the number of licenses issued to these local agents, the number of such licenses having fallen to 17 compared with 127 in 1893, 120 in 1892, 124 in 1891, and 117 in 1890. The decrease, as the Superintendent points out, lies not so much in the number of firms engaged in the business as in the fact that each firm, instead of taking out separate licenses for each recruiting district, confined its attention to one or two districts only. From the report of the proceedings of the fourteenth annual general meeting of the members of the Indian Tea Association it appears that the Association during the course of the year drew the attention of agents, managers and proprietors of tea gardens to the competition which existed in the recruitment of labour and to the multiplication of establishments engaged in this work; the decrease in the number of licenses issued to agents was no doubt in some measure due to the wise policy of the Association in this respect. A sub-committee has, moreover, been appointed to consider what further action can be taken to reduce this competition, which is harmful alike to the coolies and to their employers, and profitable only to the middlemen. This is undoubtedly a move in the right direction: it is mainly to the existence of excessive competition that the fact must be attributed that while a Bihar or North-Western Provinces coolie can be recruited for the Colonies and brought to Calcutta at a cost of little over Rs. 20, he costs Rs. 80 or even Rs. 100 when landed at Dhubri for work in Assam. The result of this change of policy on the number of coolies recruited has so far been unimportant. There was a decrease, but there appears to be no reason to ascribe it to the falling off

locally into any complaints that came to his ears regarding emigration. Such complaints have not been wanting, especially in the direction of Purulia, and the Lieutenant-Governor considers it essential that Dr. Macleod should at least twice a year visit the depôts at Goalundo, Ranigañj, Asansol and Purulia, besides making special journeys for the purpose of enquiring into any malpractices reported. The Commissioner of the Dacca Division writes in very commendatory terms of the work of Dr. Kishori Lal Banerjee, Embarkation Agent and Medical Inspector at Goalundo. Some charges had been made against this officer on the ground of undue interference with the coolies, but these on investigation turned out to be unfounded, and brought him praise, not rebuke. The Commissioner remarked :—

"That only one case occurred under the Act is, I think, satisfactory proof of the harmonious working of the Act and rules, so far as Goalundo is concerned, and is highly creditable to the Embarkation Agent, Babu Kishori Lal Banerjee, whose conduct of the business leaves nothing to be desired."

In these remarks His Honour is glad to be able to express his concurrence.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Govt. of Bengal.

SURVEY AND SETTLEMENT OF THE WESTERN DUARS IN THE DISTRICT OF JALPAIGURI.

REVENUE DEPARTMENT—LAND REVENUE No. 3200.

Calcutta, the 8th July 1895.

RESOLUTION.

READ—

A letter No. 390T.S., dated 26th June 1895, from the Director of Land Records, submitting the Settlement Officer's final Report of the Survey and Settlement of the Western Duars in the district of Jalpaiguri, together with a Note, dated 24th November 1894, and a letter No. 455, dated 14th May 1895, from the Commissioner of Rajshahi.

1. The Settlement of the Western Duars was begun in 1889, and the assessment was completed in March 1894. The work of copying the records and handing them over in a finished state to the Deputy Commissioner lasted on to the middle of October 1894. The completion report on the settlement was written by that date, and a preliminary copy furnished to the Commissioner, but it was not made over to the Press by the Settlement Officer for final printing until the middle of March 1895.

Delay.

2. The Report submitted by Mr. D. H. E. Sunder, the Settlement Officer, contains much which is unnecessary and unsuitable in a settlement report, the standard of which is laid down in Rule 11A of Chapter XIII of the Settlement Manual, 1888. It aims too much at providing information which is ordinarily looked for in a District Gazetteer, and it also errs by criticising in an unsuitable and sometimes ignorant manner the working of other Departments respecting which Mr. Sunder did not possess sufficient knowledge. The remarks on Forest Management in pages 15 and 112 are a salient instance of this error. The whole of Chapters IV (Administrative History), VI (the People), VII (Social Life and Religions of the People), VIII (Emigration and Immigration), IX (Education), and X (Sanitary Improvements), though such information is frequently given in Settlement Reports written in the early part of the century, are superfluous in a Settlement Report of this period, and the information contained in Chapter XII (Agricultural Operations), XIII (Agricultural Staples), and XIV (Agricultural Appliances) is of comparatively little value. On the other hand, as regards the pure settlement part, the Report is deficient. The information given as to how and why different rates were sanctioned and applied in the different parganas under settlement is meagre; and the particulars required under sub-heads 1 and 3 of head "III—Comparison of former and present condition of the tract under report" of the Settlement Manual are not consolidated and brought together, but are scattered over many paragraphs. It was very essential for the Settlement Officer to have shown why the present total area differs from the old total; how the cultivated area and the areas of the three principal classes of soil (homestead, rupit, and faringati), compare with the old areas; and how much of the increase in assessment is due to increase of area and how much to increase of rates. These defects have been supplied by the Commissioner, Mr. P. Nolan, to the best of his power in paragraphs 6 to 11 of his Note of 24th November 1894, and in the statement attached to his letter No. 455, dated 14th May 1895; but the figures given in paragraph 13 of this Resolution are more accurate than any others.

Defects of the Report.

3. The tract of country known as the Western Duars of Jalpaiguri was ceded to the British Government by the Bhutan Government in November 1865. It measures 1,209·70 square miles, or 774,208·16 acres, exclusive of tea lands and forest lands, which were not dealt with at this settlement. Out of this, 421·20 square miles, or 269,569·88 acres, were surveyed on a small scale, generally of 2 inches to a mile, and the remaining area cadastrally surveyed is 788·50 square miles, or

The area under settlement.

504,638·28 acres. The following table gives the number, names, and areas of tahsils and parganas, and number of taluks and jotes in the Western Duars:—

No.	Name of tahsil.	Number of parganas within tahsil.	Name of pargana.	Number of taluks within pargana.	Number of jotes within taluk.	Area cadastrally surveyed.	Total area measured in the estate, excluding tea and forest lands.

		12		183	11,112	504,638·28	774,298·16

Pargana Ambari Falakata, though geographically situated in Jalpaiguri, west of the Tista, is included in the Duars.

4. *Origin of tenures.*—Mr. Nolan in paragraph 6 of his Note gives an interesting account (which deserves to be read in *extenso*) of the rents levied by the Bhutan Government and the system of tenures which existed when the country passed from it to the British Government. Under Bhutan land was left rent-free for five years after the forest had been cut, and was then assessed at area rates according to the *hál*, or plough, a local measure of about five acres. In the Sidli Duar (in Assam) (there is no record showing the area rates in the other Duars) the charge was Re. 1-14 per *hál*, or 6 annas an acre for *rupit* land, all other classes of soil being granted to residents free of charge, while strangers were charged Rs. 2-8 a *hál*, or 8 annas an acre, for land of every kind. There were also a special cess on mustard seed, a local rate of 1 rupee a *hál* and 2 rupees a house for *pujas*, a fee for irrigation channels, a "dao-tax" levied from those who temporarily squat in the jungle, a tax on looms, and licenses to trade and ply boats. The demand was realised by tahsildars direct from the jotedars. No information appears to exist as to the total amount of revenue collected by the Bhutanese before the conquest.

Revenue history.

5. The first British settlement was made by Mr. W. O. A. Beckett, Deputy Commissioner, in 1871, after a detailed measurement and classification of all cultivated land and of such waste as the jotedars desired to include in their holdings. Area rates were fixed as follows:—

Description of Land.	Rent per acre in North Mainaguri.	Rent per acre in the rest of the Duars.
1	2	3
	Rs. A. P.	Rs. A. P.
Homestead and rupit ...	1 8 0	1 0 0
Faringati	0 12 0	0 8 0
Waste	0 1 6	0 1 6

The rates for North Mainaguri were the same as those imposed in the Eastern Duars of Assam. Altogether 142,127 acres waste and 80,398 acres of cultivation were settled with the jotedars at a revenue of Rs. 86,830, against Rs. 39,526,

the revenue previously paid to Government. This settlement was made for a period of seven years, with effect from April 1871, but it was permitted to stand for two years more. It did not include South Mainaguri, which had been farmed to the Raja of Bykuntpur, and which was, on the expiry of the farming lease, brought under settlement; and the following rates were adopted :—

	Rs.	A.	P.
Homestead land	2	0	0
Rupit	1	8	0
Faringati	1	2	0
Waste	0	3	0

This settlement, which took effect from 1st April 1876, resulted in raising the revenue of South Mainaguri from Rs. 42,706 to Rs. 65,133.

6. The second settlement of the 11 parganas of the Western Duars (excluding South Mainaguri) was made for 10 years, with effect from 1st April 1880. The rates adopted in South Mainaguri were extended to parganas North Mainaguri, Ambari Falakata, Chengmari, and Moraghat, and the remaining parganas were assessed proportionately lower as being more backward. The rates were as follows:—

Description of Soil.	Mainaguri, Ambari Falakata, Chengmari, and Moraghat.	Lakhipur, and West Madari.	The remaining parganas.
1	2	3	4
	Rs. A. P.	Rs. A. P.	Rs. A. P.
Homestead and bamboo	2 0 0	1 12 0	1 8 0
Rupit	1 8 0	1 4 0	1 2 0
Faringati ...	1 2 0	0 12 0	0 9 0
Waste	0 3 0	0 3 0	0 3 0

The total area surveyed was 1,119,322 acres, of which 264,680, excluding tea lands, were assessed; tea lands made up 19,607 acres, and the remaining 835,035 acres, including reserved forest, were unassessed. This settlement resulted in increasing the revenue of these 11 parganas from Rs. 88,618 to Rs. 1,51,862. This assessment was found to press too heavily on the jotedars, and there was much default in collections. The local officers ascribed the partial break down of the settlement mainly to three causes, viz., insufficient care in the classification of soils, failure to make allowance for injury by wild beasts, and too sudden an increase of demand in the case of some of the jotes. Rupees 5,465 were lost by relinquishments and desertions, and ultimately a further reduction of Rs. 17,806 had to be made by Government.

Resettlement.

7. This settlement expired on 31st March 1890; and in 1888 the Government of India had ordered a resurvey and resettlement under the provisions of the Bhutan Duars Act, XVI of 1869. Mr. E. Walsh, C.S., was appointed Settlement Officer, and joined his post on 13th February 1889. He was compelled by ill health to retire from the settlement on 9th November 1889, and Babu Chunder Kanta Ganguli, Assistant Settlement Officer, remained in charge till 20th January 1890. Mr. D. H. E. Sunder, Deputy Collector, was then appointed Settlement Officer, and conducted the operations till their close. The work was carried on under the supervision of the Commissioner and the Director of Land Records.

Demarcation of jotes.

8. The demarcation of jotes over the greater part of the area under survey was made by Munshi Panch Cowri Biswas, Assistant Settlement Officer, between November 1888 and March 1890. The survey and preliminary record-writing were carried out by a Party of the Survey of India under the immediate charge of Mr. H. T. Hanby, Extra Assistant Superintendent of Survey, and under the superintendence

of Captain G. B. Hodgson. The survey work and the initial record-writing were finished by the Survey Department by the end of June 1892. The settlement field-maps were drawn to the scale of 16 inches to the mile.

Classification of soil and rates.

9. Settlement work began in November 1890, in parganas North and South Mainaguri and Chengmari, and an offer of representative jotedars to pay an enhancement of three annas in the rupee for the good taluks and one anna in the rupee for a few specified as bad, was considered to be a suitable basis for fixation of rates.

The amins of the Survey Department had classified the rupit and faringati lands in three classes according to their supposed values, and in October 1890, rates had been sanctioned based upon that classification. But when Mr. Sunder came to examine into these classes, he found it impossible to justify them, and the jotedars refused to accept them as representing any really existing difference in the value of the soil. Sir Charles Elliott, after visiting the tract in April 1891, agreed in these objections and authorized Mr. Sunder to impose the following rates :—

	Rate per acre.	
	Rs. A. P.	
Basti	3 0 0	
Rupit	2 0 0	In exceptionally favoured tracts near a market or road, &c.
	1 12 0	In ordinary first class blocks.
	1 6 0	Ditto second ditto.
Faringati	1 6 0	In ordinary first class blocks.
	1 2 0	Ditto second ditto.
Waste	0 3 0	

These differential rates were to be imposed on blocks of land, not on individual fields, whole tracts being classed by the Settlement Officer as first or second class according to his knowledge of their situation and advantages.

10. In the remaining nine parganas all rupit and faringati lands have been placed in a single class only, *i.e.*, without subdivision into 1st class, 2nd class, &c., under the major classes. The settlement of these parganas, which are in a comparatively backward state, was made on the basis of the rents paid by the chukanidars, the revenue in every case being two-thirds of the rent. Where the jotedar cultivated himself, rates were fixed so as to correspond with the rental paid for similar lands by chukanidars, deducting the jotedar's allowance. This system was worked out in detail for the different parganas, and rates for jotedars' lands were separately calculated for each. In parganas Lakhipur, East Madari, Chakwakheti, Buxa, Bhatibari, Bhalka, and Ambari Falakata, the rates calculated in this manner were found to be generally the same as those sanctioned at the last settlement. In Moraghat the rate for rupit was raised from Re. 1-8 to Re. 1-12, that for faringati from Re. 1-2 to Re. 1-4, and in West Madari the rupit rate was raised from Re. 1-4 to Re. 1-8. In Moraghat the full rates sanctioned were reduced in the jotes which are subject to ravage by wild animals.

Number and distribution of jotes.

11. The 11,112 jotes shown in the table in paragraph 3 of this Resolution are distributed as follows :—

		Number.	Area in acres.
Jotes assessed to revenue		9,971	384,895·91
Jotes being markets:	Private markets	17	99·14
	Government markets ...	44	2,020·71
Area left unassessed.	Waste land jotes or rather blocks held khas by Government and reserved for fodder and fuel purposes.	817	49,109·08
	Waste land jotes or blocks held khas by Government, but available for settlement.	262	338,047·26
	Revenue-free jote (granted by Government to late Rai Upendra Nath Duardar).	1	36·6
		11,112	774,208·16

Assessment.

12. At the present settlement the revenue, which has been assessed on the 9,971 jotes, will be Rs. 3,74,901, against Rs. 2,33,999, the former revenue, showing an increase of Rs. 1,40,902, the details of which are given in the following statement:—

Description of land comm under settlement.	Number of jotes assessed to revenue.	Class of soil assessed.						Revenue payable according to—		Increase.
		Basti.	Rupit.	Faringati.	Doba.	Waste.	Total.	Last settlement.	Present settlement.	
1	2	3	4	5	6	7	8	9	10	11
		Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Rs.	Rs.	Rs.
Area of old jotes come under revision of settlement.	6,703	8,847	113,067	77,022	1,249	94,878	295,963	2,29,104	3,17,890	88,786
Area of new jotes assessed to revenue.	2,743	244	6,125	7,595	129	40,603	60,697	.....	46,198	46,198
Area of Jalpesh temple lands resumed and assessed to revenue	44	64	747	460	3	344	1,619	.....	2,465	2,465
Area of Colonel Hedayet Ali's estate settled at half rates.	389	371	7,982	4,490	38	9,682	22,563	4,895	7,897	3,002
Area of lands held revenue-free by the late Rai Upendro Nath Duardar, now settled with his heirs at one-fourth rates.	92	94	1,007	383	21	2,550	4,054	.....	451	451
Total ...	9,971	9,620	129,928	89,950	1,440	154,057	384,896	2,33,999	3,74,901	1,40,902

The increase of Rs. 88,786 in the revenue of old jotes borne on the Deputy Commissioner's tauzi before 1892-93 is due, the Settlement Officer writes, to (1) extension of cultivation, and (2) to enhancement of rates. Of the 2,743 new jotes, including lands leased under the Arable Waste Land Rules, 1,104 were assessed at 12 annas an acre, 156 at 9 annas an acre, and the remaining 1,483, which were found well under cultivation, at the full rates.

Increase of revenue:—amounts due to (1) increase of area and (2) rise in rates.

13. The precise degree in which the increase in the present assessment is due to increase of area and to rise in rates respectively, ought to have been brought out with especial care and fullness by the Settlement Officer, and it is in this respect that his Report is chiefly deficient. The following statement has been prepared from the pargana details given on pages 137-161:—

Name of Pargana.	Former Settlement.						Former assessment.	Present Settlement.						Present assessment.	
	Homestead.	Rupit.	Faringati.	Total cultivated.	Waste.	Total area.		Homestead.	Rupit.	Faringati.	Total cultivated.	Waste.	Total area.

Madari ...	58	1,183	3,112	4,354	3,243	7,597		78	2,011	1,481	3,569	5,104	8,673	4,409	
ka ...	631	5,353	2,116	8,101	2,906	11,006	7,830	703	6,468	1,316	8,487	4,553	13,040		10,170
ari Falakata	240	4,764	2,280	7,294	1,932	9,225	10,483	254	4,021	2,463	7,118	2,252	9,370		10.701
	7,458	91,108	88,377	1,86,944	1,20,384	3,07,328	2,33,999	9,021	1,81,388	89,950	2,30,839	1,54,057	3,84,895	3,74,901	

The former assessment amounted to Rs. 2,33,999. If the old rates are applied to the new areas, the following result is obtained:—

	Acres.	Rs.	Rs.
Homestead	9,621	at 2	19,242
Rupit	131,268	„ 1-8	1,96,902
Faringati	89,950	„ 1-2	1,01,193
Waste	154,057	„ 0-3	28,885
			3,46,222

The increase in area, therefore, accounts for a rise of Rs. 1,12,223, or about 48 per cent. The present settlement is actually Rs. 3,74,901, so there remains a balance of Rs. 25,679 or about 12 per cent., which is attributable to the rise in the rates.

Cropped area.

14. The total cropped area in the estate is 206,838·42 acres. The following table shows the areas under the principal crops and their percentage:—

Name of crop.	Area under crop.	Percentage.
1	2	3
Rice	164,316·87	79·43
Mustard	18,715·85	9·05
Jute	6,620·33	3·20
Tobacco	7,083·94	3·43
Total ...	196,736·99	95·11

Markets.

15. There are 44 Government markets and 17 private (jotedars') markets in the Western Duars; and the latter have been settled at a total annual rent of Rs. 1,246. Since March 1888 tolls have been levied, according to a fixed scale, in markets on khas lands; and Rs. 13,753-12-3 were collected in this way during 1893-94. The fees levied in the Government markets have been constituted an excluded local fund. The receipts from tolls and the rents of private markets are expended on the maintenance and improvement of markets. All markets in the Western Duars are under the control of the Deputy Commissioner.

Fodder and fuel reserve.

16. Eight hundred and forty-three blocks of land, measuring 50,137·63 acres, in the several tahsils, have been reserved for fodder and fuel purposes. Of these blocks 26, measuring 1,028·55 acres, have been leased out, and the remaining 49,109·08 acres have been left unsettled. Maps showing the situation of these reserves have been prepared for use of the tahsildars, to check encroachments. The Settlement Officer recommends the planting of trees for firewood on a few of the larger blocks in South Mainaguri, although vast jungles exist in the neighbourhood, on the ground that "difficulties are put" by the Forest Department "in the way of people in obtaining timber of any kind." The suggestion and the reason are alike unsound and do not require notice. The unleased area reserved for fodder and fuel purposes is probably in excess of requirements and should not be locked up so as to prevent desirable extension of cultivation.

Arable waste lands.

17. Rules for the grant of leases of arable waste lands in the Western Duars were, as last revised, published in the *Calcutta Gazette* of 16th May 1888. All lands available in the Mainaguri tahsil for settlement under those rules have been taken up, but in the Falakata, Alipur, and Bhalka tahsils 292,692·68 acres are still available. The Settlement Officer recommends that in future the waste lands available in the Western Duars be assessed to revenue at the pargana faringati rate for such period as shall coincide with the termination of the present settlement, instead of being leased under the abovementioned rules. The Commissioner points out that the rules provide privileged rates for the first five years of occupation, and then contemplate the assessment only of lands actually reclaimed. He therefore thinks it doubtful whether, merely to escape the trouble of a second measurement on the expiration of five years, cultivators would be willing to forego these advantages. The Lieutenant-Governor agrees with the Commissioner.

Different classes of tenants.

18. The following table shows the number of tenants of different classes in the Western Duars, the land held by them, and the revenue and rent paid by them :—

Class of Tenant.	Number of tenants.	Number of holdings.	Total area held by each class of tenant.	Revenue or rent payable according to present settlement.	Average area per holding.	Average revenue or rent per acre.
1	2	3	4	5	6	7
			Acres.	Rs. A. P.	Acres.	Rs. A. P.
Jotedars	23,339	9,971	201,693·57	3,74,901 0 0	38·6	0 15 7
Adhiars under jotedars.	15,618	15,618	54,913·92	.....	3·5	...
Total ...	38,957	25,589	256,607·49	.....	.....	.....
Chukanidars under the jotedars.	14,016	11,176	93,582·09	1,69,472 12 5	11·4	1 5 1
Adhiars under the chukanidars.	6,552	6,552	16,452·43	.....	2·5	.....
Dar-chukanidars ...	3,739	3,739	18,253·90	.....	4·8	...
Total ...	24,307	21,467	128,288·42	.....	.....	.....
Grand Total ...	63,264	47,056	384,895·91	.....	...	.....

The number of resident jotedars is 21,724, and that of non-resident jotedars, who include many persons living near their jotes, though not on them, is 1,615, or less than 8 per cent. The jotedar's interest in his land sells at a substantial price, varying from three years' purchase on the rental in Alipur tahsil to 13 years' purchase in Mainaguri. With regard to *chukanidars*, it has been laid down that they have a permanent tenure, and are entitled to retain their holdings through the settlement, subject to the condition that the rents paid by them can be enhanced if they do not already pay 50 per cent. above the jotedari rates ; if so enhanced, no further enhancement should be allowed during the currency of the settlement. The *dar-chukanidars* are few. In order to discourage subinfeudation they have not been in any way acknowledged or guarded at this settlement, except as stated in paragraph 5 of the Director's covering letter.

Population.

19. According to the census of 1891, the population of the Western Duars was 296,964 souls, the principal castes being Rajbansi or Koch, Muhammadan, Dobasiyas, who were formerly Rajbansis, Mech, Garo, Bhutia, and Toto. The Rajbansis preponderate, forming about 41 per cent. of the whole population of the Western Duars.

Publication and confirmation of record under Act XVI of 1869.

20. As required by Rule V of the Schedule of Rules appended to Act XVI of 1869, the records of jotes in all the five tahsils were duly published between March 1893 and February 1894, and under Article XI of that Schedule, the Commissioner has confirmed the settlement of all the tahsils by notifications published by him in the *Calcutta Gazette* between November 1893 and April 1895. The settlement of jotes of the Mainaguri, Falakata, Alipur, and Bhalka tahsils has been made for 15 years, while the settlement of jotes of pargana Ambari Falakata has been fixed for 10 years.

Revenue kists.

21. The revenue is paid by two kists, namely, the 10-annas kist on 15th February, and the 6-annas kist on 31st October. The revenue was collected on the new basis in Mainaguri tahsil, with effect from 1st April 1892 and in the remaining tahsils with effect from 1st April 1893.

Miscellaneous revenue.

22. Besides land revenue, revenue is derived from certain other fluctuating sources, of which the principal are:—

	Revenue obtained in 1893-94.
	Rs.
Capitation tax	9,854
Grazing fees	10,919
Fisheries	1,954
Sale of trees	16,829

Capitation tax is paid annually by Meches, Nepalese, and Garos for land cultivated by them at the rate of Rs. 3 or Rs. 4 a year per each adult male. Fees for grazing cattle on Government khas land are charged at the following rates:—

For each buffalo ...	...	8 annas a year.
„ cow ...	...	4 „ „
„ goat or sheep ...	...	2 „ „

The Lieutenant-Governor would like to have a report from the Commissioner, explaining why, as stated in paragraph 696 of the Report, the rates fixed for timber cut from khas lands have been fixed by the Deputy Commissioner at 25 per cent. less than the Forest Department rates.

Lands settled with the heirs of late Colonel Hedayet Ali.

23. Of 41,754·74 acres of land, including waste, lying in parganas West Madari, Moraghat, and Lakhipur of the Falakata tahsil, leased to the heirs of the late Colonel Hedayet Ali in 1883, 19,191·31 acres of waste land have been resumed for failure to fulfil the conditions as to reclamation laid down in the lease, and the remaining 22,563 43 acres in 389 blocks or jotes have been settled with them at half rates. The present revenue is Rs. 7,897-7-3, against a former sum of Rs. 4,894-12.

Jotedars' Union Fund.

24. With regard to the Jotedars' Union Fund, of which an account is given in paragraphs 489 to 493 of Mr. Sunder's report, it appears from Government order No. 465T.—R., dated 5th November 1890, that Sir Steuart Bayley consented to the administration of this fund by Government officers as an exceptional and temporary measure, and subject to the approval of the Government when the Duars' Settlement report was submitted. Mr. Nolan reports that the proceeds of the Fund have been judiciously expended, but that the existence of the Fund is purely voluntary and is not likely to be long continued.

Cost of operations.

25. The total cost incurred on 504,638·28 acres cadastrally surveyed and settled, and 269,569·88 acres surveyed on the scale of 2 inches to the mile, is as follows:—

	Rs.	Average cost per square mile. Rs. A. P.	Cost per acre. Rs. A. P.
Survey	3,75,105	310 0 0	0 7 9
Settlement, Rs. 1,68,807 ... ... Deduct receipts (on account of mutation and survey fees, court-fees, &c.), Rs. 36,587 ...	1,32,220	167 12 8	0 4 2
Total ...	5,07,325	.....	0 11 11

The high rate of the cost of survey was due to the unhealthiness of the climate of the Western Duars, to the necessity for importation of foreign amins, and to the dearness of labour. The cost of settlement was moderate.

Case work.

26. Mr. Sunder disposed of 8,038 boundary disputes, mutation, and other cases; and of the 873 appeals preferred to the Commissioner against his decisions, 863 were upheld, and only 2 cases were modified and 8 reversed.

Maintenance of records.

27. Rules have been sanctioned in Government order No. 1877, dated 4th April 1895, for the maintenance of the records of the present settlement. The three tahsildars of Mainaguri, Falakata, and Alipur, who continue to be in charge of the work of survey and settlement of waste lands for ordinary cultivation, are to be appointed Registrars of Mutations in connection with the maintenance of the settlement records; and Maulvi Wajhuddin Ahmed, Officiating Deputy Collector in charge of the Tea Survey Department, has been appointed Settlement Officer, and given the general charge of supervision over the work of maintaining the records. Inspection, and the penalties contained in the patta, are relied on in order to secure the maintenance of the record. It is in contemplation that the Maintenance of Records Act III (B.C.) of 1895 lately passed in the Bengal Legislative Council should be extended to the Western Duars, when the penalties therein contained will apply, and some modification of the rules lately sanctioned will be necessary. The settlement records are deposited at the three tahsils named above, in which pucka record-rooms have been built for the purpose.

28. The Lieutenant-Governor concurs in the commendation which the Commissioner has bestowed upon Mr. Sunder, that he has conducted this settlement with exceptional industry and ability. His Report has been found open to criticism, but his work as Settlement Officer was much superior to his Report. He laboured with great devotion in the unhealthy climate of the Terai, and carried the consent of the people with him, to an almost unprecedented degree, in effecting a large increase in the Government revenue. The thanks of Government are also due to the former and present Commissioners, Messrs. Lowis and Nolan and the former and present Directors of Land Records, Messrs. Finucane and Macpherson, for their efficient supervision of the work.

ORDER.—Ordered that copies of this Resolution be forwarded for the information of the Director of Land Records and the Commissioner of Rajshahi.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 8th July, 1895.

Burdwan.—Rainfall at Sadar 1·84. Weather cloudy. *Aus* doing fairly, but more rain wanted for cultivation of *aman*. Common rice sells from 10 to 21 seers per rupee.

Midnapore.—Rainfall at Sadar 3·02. Weather seasonable. Prospects of indigo, sugarcane and *til* (sesamum) good. Transplantation of paddy going on. More rain wanted. Common rice sells from 16 to 21 seers a rupee.

24-Parganas.—Rainfall at Sadar ·99. Weather seasonable. Prospects of crops good. Transplantation of *aman* commenced. Condition of cattle good. Fodder and water sufficient. Rice sells at—

		Srs.	
Sadar	11 to 13		
Barasat	14		
Basirhat	19	per rupee.	
Diamond Harbour	14		

Murshidabad.—Rainfall 3·89. Weather hot. State of indigo, sugarcane and mulberry seems favourable. The late rain has done much good to *bhadoi* paddy and jute plants. Fodder available. Common rice sells at 15 seers per rupee.

Khulna.—Rainfall at Sadar 1·09, Bagerhat 5·38, Satkhira 2·51. Weather cloudy and rainy. Cultivation of land for *aman* in progress. Prospects of standing crops good. More rain wanted in Satkhira. Price of common rice 17 to 22 seers per rupee. Fodder and and water sufficient.

Dinajpur.—Average rainfall 1·96. Weather hot and cloudy. More rain wanted. Price of common rice 14 seers a rupee. Outbreak of cattle-disease reported from Thakurgaon. No complaint for fodder or drinking water.

Rangpur.—Average rainfall ·97. Weather hot and cloudy. Want of rain has damaged the *aus* crop and retarded the sowing of *aman*. Fodder available. Rice selling from 11 to 15 seers per rupee. (Heavy rain now falling and prospects improving.)

Pabna.—Rainfall 2·20. Weather cloudy and rainy. Good rain has fallen lately. More is wanted. Crops doing well. Common rice selling at 16 seers per rupee at Pabna and 15 seers at Sirajganj. Fodder and water ample.

Dacca.—Rainfall 2·12. Weather cool with rain at intervals. Prospects of *aman* and jute good. *Aus* and *til* are being harvested. Price of common rice 19 seers per rupee. No cattle-disease. Fodder plentiful.

Chittagong.—Rainfall 4·61. *Aus* doing well. *Aman* being transplanted. Prospects fair. Cattle-disease continues. Water and fodder abundant. Prices steady.

Patna.—Rainfall 1·47. *Bhadoi* crops and paddy are being sown. *Marua* is being transplanted. Prospects good. Common rice selling at 17 or 18 seers per rupee.

Gaya.—Rainfall at Sadar 2·89. Sufficient rain in the district generally. *Marua* millet is still being transplanted and paddy and maize are being sown. Prices about normal. Fodder and water ample.

Champaran.—Rainfall at Sadar 6·23. Prospects of crops good. Common rice sells at 15½ seers a rupee. Fodder and water for cattle sufficient.

Darbhanga.—Rainfall though not yet sufficient has greatly benefited *bhadoi* sowings. More rain wanted. Fodder and water sufficient. Prices almost stationary.

Bhagalpur.—Weather hot and cloudy. Standing crops doing well. Only paddy seedlings suffered for a time. There has been rain throughout the district. Common rice sells at 17 seers 10 chitaks per rupee. Cattle-disease reported from Banka. Fodder and water sufficient.

Purnea.—Rainfall 5·35. Prospects of *bhadoi* and jute continue good. Rain has done much good to *aghani* paddy. More rain is wanted in Araria for transplantation of *aghani* seedlings. Fodder and water sufficient. Common rice sells from 14 to 22 seers a rupee.

Cuttack.—Rainfall ·28. Weather seasonable. Crops on low lands are reported to have been somewhat damaged by floods. Prospects of *beali* otherwise good. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 23 seers 10 chitaks per rupee.

Hazaribagh.—Weather seasonable Sowing of paddy and *bhadoi* crops approaching completion. Transplanting of paddy seedlings commenced. All crops doing well. Fodder and water sufficient.

General Summary.—There was rain in all the reporting districts during the week, but more is wanted in parts. The condition of the standing crops is reported good. The transplanting of the winter rice seedlings has commenced in several districts, and in the Patna Division the sowing of the *bhadoi* crops is in progress. The jute crop is beginning to be cut in the north of the Rajshahi Division, but unless heavy rain falls soon there will not be water enough for steeping. In Cuttack the floods are said to have done some damage on low lands. Cattle-disease is reported from Dinajpur, Chittagong and Bhagalpur. The price of common rice is almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 9th July, 1895.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 8th July, 1895.

C. E. BUCKLAND,
Secy. to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of June 1895.

	Inches.	Date.	Hour.
The mean pressure of the month	29·571		
The average pressure of June from 24 years' registers ...	29·549		
The highest pressure in the month	29·813	5th	22
The lowest pressure in the month	29·273	28th	16
The range of pressure	0·540		
	Hours.		
The total number of hours of bright sunshine during the month	171·7		
The maximum possible number of hours of sunshine ...	403·4		
	⊖		
The mean temperature of the month	84·1		
The average temperature of June from 24 years' registers ...	85·0		
The highest temperature in the month	95·3	14th	
The lowest temperature in the month	72·8	1st	
The range of temperature during the month	22·5		
The mean daily range of temperature	12·4		
The greatest range of temperature in one day	21·9	1st	
	Per cent.		
The mean humidity of the month	84		
The average humidity of June from 24 years' registers ...	81		
	Inches.		
The mean vapour tension of the month	0·974		
The average vapour tension of June from 9 years' registers ...	0·998		
The mean cloud proportion of the month	6·38		
The average cloud proportion of June from 18 years' registers	7·01		
	Inches.		
The total rainfall of the month	11·82		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground).	10·34?		
The average fall of June from 48 years' registers	12·08		
The greatest fall in 24 hours	1·53	4th	
	Days.		
The number of rainy days in the month	22		
The average number of rainy days in June from 24 years' registers	19		
	⊖		
The mean maximum equilibrium temperature of solar radiation during the month	146·9		
The mean difference of sun and air temperatures	56·8		
The greatest sun temperature	157·8	8th	
The greatest excess of sun over air temperature	66·4	10th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	75·6		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2·2		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	3·9	13th	
	Miles.		
The mean movement of the wind per day	124·1		
The greatest movement of the wind in one day	259·0	28th	
The greatest movement of the wind in one hour	19·0	28th, 3 to 4 P.M	

The number of hours with winds from each of the 8 points—
N. 20, N.E. 47, E. 200, S.E. 164, S. 146, S.W. 82, W. 10, N.W. 6, Calm 45.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·5 higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

Orissa. Chota Nagpur.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 6TH OF JULY 1895.

THE cyclonic storm which had been the principal feature of the weather in Bengal and the north of the Bay during the week ending on the 29th June had moved towards the north-west, but was influencing conditions in the west of the province.

On the 30th June, the first day of the week under review, pressure was still low in the west of Bihar, and gradients were steep from east to west, especially in the northern districts. During the preceding twenty-four hours there had been a very rapid increase of pressure in Chota Nagpur and a rise of more than a tenth of an inch in Orissa and South-West Bengal, while a moderate fall had prevailed in Bihar. Rainfall was still very general over the whole province except in Orissa and the extreme north of Bihar, but falls were not more than moderate except in East Bengal and at Darjeeling and Kurseong. As the heavy rainfall had been confined to Orissa and Chota Nagpur, temperature was still about 5° below the normal in these districts, while in the central districts and Bihar there was a small defect. In Assam and North Bengal, on the other hand, temperature was above the normal. On the 1st of July the rapid rise of pressure in Bihar, and moderate changes elsewhere resulted in an almost normal distribution. With the clearing skies temperature rose very quickly, the change beginning in Orissa and extending northwards over the province, so that by Tuesday, the 2nd, there was excess in means for the day at nearly all stations.

After the recovery of pressure and a return of comparatively settled weather, the pressure distribution underwent but little change during the remaining days of the week. The uniformity, however, was a more distinct feature than usual, and a very shallow depression appeared over the centre of the province. Round this low pressure area winds took irregular cyclonic directions, and instead of blowing from the east in Bihar, as they generally do at this season of the year, the prevailing direction was from the west.

In Lower Bengal conditions became more normal after the changes referred to above. For the past two or three weeks the monsoon current has been diverted towards the west, instead of moving northwards over East Bengal, but on the 1st of July southerly winds prevailed, and from then till the end of the week, the south or south-easterly winds in East Bengal showed that the moist winds from the east of the Bay were moving in their customary channel. The effect of this on the rainfall distribution is already apparent, as the average fall for this week in East Bengal is almost normal, whereas in the previous weeks there was a large deficiency. But the difference in North Bengal is not so marked, though there also the rainfall has been more heavy. In the previous week the average fall was about a sixth part, while this week it is more than half the normal.

The low pressure area, which became fairly well marked on the 2nd, was more distinct on the 3rd, and the centre of the wind circulation appeared to be in the east of Bihar or in North Bengal. The distribution, however, was so uniform that the somewhat irregular changes of the 4th gave rise to a number of local areas of low pressures, and these to thunderstorms which caused general but irregular, and in places very heavy rainfall.

As lowest pressure on this day was over Bihar, the depression was moving slowly towards the north. On the 5th changes continued small, but a fall in the central districts and a rise elsewhere caused the shallow depression to become more distinct with a more regular circulation of winds. Heavy rain again fell in places, chiefly in Chota Nagpur and the extreme north of Assam and North Bengal. On the 6th pressure rose everywhere, moderately in the southern districts, and slowly further north, and the depression was being forced up against the hills, where it became diffused on the following day.

Pressure.—After the rapid recovery in the western districts during the two first days of the week, changes were unimportant, and readings nearly normal. Means for the week differ but little from their normal values. In Orissa the difference is only a few thousandths of an inch. In the other districts there is defect, varying from ·01 inch in South-West Bengal to ·04 inch in Assam.

Temperature.—While the general rainfall continued in the early part of the week, temperature was below the normal everywhere, especially in Orissa and Chota Nagpur. The recovery was quick after the cloudy weather passed away, and for several days mean temperature was high by between 2° and 3°. When the disturbed weather became more decided towards the end of the week, comparatively low temperature again prevailed. The means for the larger subdivisions are above the normal in all districts except Chota Nagpur, excess of more than 1° occurring only in Assam and East and North Bengal.

Rainfall.—Though there has been a good deal of rain during the week, the slight break in the middle has prevented amounts from exceeding the normal except in Chota Nagpur. The distribution on the whole has been more uniform, as East Bengal has received nearly the normal amount and North Bengal more than two inches. The daily falls during the latter part of the week, being due to local thunderstorms, were very irregular in amount, some places receiving very little rain, while at scattered stations there was as much as 3 inches. Defect in North Bengal is 1·96 inches, in Bihar and Orissa 1·2 inches, and in Lower Bengal a third of an inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 6th of July 1895 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.

The average fall of the corresponding period for 24 years, Surveyor-General's Office	3·37
The total fall from 1st January to 6th July 1895	17·18
The average fall of the corresponding period for 24 years, Surveyor-General's Office	24·25

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; t, thunder p, passing temporary showers.

METEOROLOGICAL OFFICE, GOVT. OF INDIA; *Calcutta, the 8th July 1895.*

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 *and* 1892.

The Council met at the Council Chamber on Saturday, the 6th July, 1895.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding*.
The HON'BLE H. J. S. COTTON, C.S.I.
The HON'BLE D. R. LYALL, C.S.I.
The HON'BLE J. A. BOURDILLON.
The HON'BLE C. E. BUCKLAND, C.I.E.
The HON'BLE H. H. RISLEY, C.I.E.
The HON'BLE R. C. DUTT, C.I.E.
The HON'BLE RAI DURGA GATI BANERJEA BAHADUR, C.I.E.
The HON'BLE SURENDRANATH BANERJEE.
The HON'BLE J. G. WOMACK.
The HON'BLE MAHARAJA JAGADINDRA NATH ROY OF NATO.
The HON'BLE MAULVI MUHAMMAD YUSUF KHAN BAHADUR.
The HON'BLE C. E. SMYTH.

STATEMENT OF THE COURSE OF LEGISLATION.

The Hon'ble THE PRESIDENT said:—"Before beginning the work of the Council, I wish briefly to state that the work of the Session which is now commencing is summed up in the List of Business which lies before Hon'ble Members. We have to introduce and to pass three small Bills, all of which will be brought forward to-day for the first time, and we have to carry through the Sanitary Drainage Bill, which is now in the hands of the Select Committee. I am in hopes that the Select Committee will be able to present their Report upon this Bill on Saturday next, and in that case I propose that we shall commence the discussion of it on this day fortnight, and then proceed to discuss it regularly as long as is necessary, till the Bill is passed. In that way I think it is probable that in the course of two, or at the outside of three, sittings, beginning from this day fortnight, the 20th instant, we shall be able to get through our legislative programme, and I shall then be able to release Hon'ble Members from further attendance in Council. Practically speaking this day fortnight will be the first day on which there will be anything but formal business before the Council, and I hope that by that time the Council will be completely re-organised, and that we shall then have present all the members who have already been elected, and who are now being re-elected, and I hope then to have the opportunity of welcoming them to the Council."

RAIN GAMBLING.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Has the attention of Government been called to the articles which have appeared in the newspapers, particularly in the *Bharat Mittra*, drawing attention to the nuisance of rain gambling at Barabazar? What action, if any, does the Government intend to take in the matter? Is the Government aware that the gambling is carried on openly in a place which is thronged with people from morning till evening and is not far off from the police-station, and that it is regarded as a serious nuisance by the respectable section of the community at Barabazar? Is the Government aware that rain gambling has been suppressed in the town of Bombay and in all the Native States?

The Hon'ble MR. COTTON replied—.

"The Lieutenant-Governor has had the subject referred to under his careful consideration; he is advised that this form of gambling cannot be interfered with except by legislation, and he has decided that it is not desirable to attempt to legislate with the object of stopping it. His reasons are, firstly, that it is practically impossible to put down betting in private houses: if the particular form it has taken in the case under reference were stopped, it would break out in some other form, and if driven into secrecy, it might be even more harmful than if practised openly. Secondly, he does not think it possible to devise a law which would stop the form of betting known as rain gambling without also bringing such practices as betting on races, or on other events of chance, within the same prohibition; he does not think the public conscience would support this; and he is opposed to any legislation, the tendency of which would be to punish acts committed by one class, while similar acts committed by another class are not interfered with."

ALLEGED DACOITY AT FARIDPUR.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

(*a*) Has the attention of Government been called to a charge of dacoity brought by one Tarak Chandra Bose in the Faridpur district against Aijuddi and others reported in the newspapers in April last? Is it true that the Deputy Magistrate who in the first instance enquired into the case remarked that there was scarcely a shadow of doubt that some of the accused entered the boat of the complainant and took its contents, and that in submitting the case for the orders of the Magistrate, recommended that the accused should be summoned—

two under section 411, Indian Penal Code, and one under section 380, Indian Penal Code? Is it the case that the Magistrate, who never examined a single witness, but relied solely on the papers in the case, not only did not summon the accused, as recommended by the investigating officer, but directed that the complainant be prosecuted under section 211, Indian Penal Code, for bringing a false charge against the accused; that thereupon the complainant moved the High Court, who reversed the order of the District Magistrate, directing him to make a further enquiry and send up the accused to the Sessions, if there was a *primâ facie* case; the High Court expressing their surprise that the Magistrate should direct the prosecution of the petitioner under section 211, Indian Penal Code, simply because there was not sufficient evidence in support of his complaint; that eventually the accused in the case were committed to the Sessions by the Deputy Magistrate, but that the Magistrate directed the Public Prosecutor to withdraw the case and the case was accordingly withdrawn, notwithstanding that the complainant himself undertook by a special application to conduct the prosecution at his own expense and on his responsibility?

Having regard to the law which leaves no remedy open to the complainant, will the Government direct the Public Prosecutor under section 417, Criminal Procedure Code, to present an appeal to the High Court against the order passed by the Sessions Judge, or pass any other orders which the justice of the case may demand?

(*b*) Is it true as stated in the petition of Tarak Chunder Bose in the case referred to in the preceding question, that the Inspector-General of Police found fault with the police in the Faridpur district for their want of success in dealing with dacoity cases, and that several cases of dacoity reported by the police to be false have resulted in the conviction of the persons accused, which convictions were upheld by the High Court?

The Hon'ble MR. COTTON replied—

"The attention of Government was called to the case in question, and a report was called for from the Magistrate through the Commissioner, which has lately been received. It appears that the facts are on the whole as stated in the Hon'ble Member's question. The complaint was rejected by the police as false; but on the plaintiff filing a petition, a preliminary enquiry was ordered, which was conducted by a Deputy Magistrate, who reported that though the charge of dacoity was false, the plaintiff had been robbed. The Magistrate read this report and held that the evidence recorded did not bear out the conclusion, and that the whole story was incredible, and he ordered the plaintiff to be prosecuted under section 211 for a false complaint. The High Court on appeal reversed this order, and directed that the Deputy Magistrate who held the enquiry should go on with it, and determine judicially whether process should issue against the persons accused, or else consider whether it is a fit case in which to direct a prosecution for false complaint. On receipt of these orders, as the first Deputy Magistrate had only second class powers, the case was made over for trial to another and full-powered Deputy Magistrate, who eventually held the charge to be proved, and committed the accused to the Sessions. The Magistrate on again reading the evidence was convinced that the charge could not be sustained, and consulted the Sessions Judge, who, after perusing the records, told the Magistrate that he saw nothing in it to justify conviction, and that it would be a waste of time to try the case. On this the Magistrate instructed the Government Pleader to ask leave to withdraw from the prosecution under section 494, Criminal Procedure Code, and the Sessions Judge passed the following order:—

'I have perused the voluminous depositions taken before both Deputy Magistrates, and consider that no conviction for dacoity is likely to be had on such evidence as that. Certainly that this Aijuddi now accused cannot be convicted. I accordingly allow the withdrawal. Aijuddi is acquitted, &c.'

"Under these circumstances it would be out of place for the Government to file an appeal against the acquittal.

"It may be convenient that I should add here that the further assertion which has been made in some newspapers, and which was repeated in a question

lately put in Parliament, that the accused were eventually convicted and the conviction upheld by the High Court, is without foundation.

"With regard to the last part of the Hon'ble Member's question, the petition of Tarak Chunder Bose, to which he refers, has not been seen by Government, but I have made enquiries from the office of the Inspector-General of Police, and have ascertained that the District Superintendent of Police of Faridpur was warned to show greater personal activity in the investigation of dacoity cases, but that it is not the fact that any cases of dacoity during 1894 and 1895 reported by the Faridpur police to be false have resulted in the conviction of the accused in the Sessions Court."

ALLEGED MURDER AT CHITTAGONG.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Whether the attention of Government has been called to the facts of a case recently published in the *Amrita Bazar Patrika* of the 14th June last, in which one Kanti Chandra Ghose was charged with murder by the District Superintendent of Police at Chittagong? Is it true, as stated in the *Patrika*, that Kanti Chandra Ghose was arrested on a charge of murdering his servant upon an anonymous application in which his name was not even mentioned, but that one Kanti Chandra Roy was charged by the writer of the anonymous petition with the said murder; and as there was no Kanti Chandra Roy in Chittagong, Kanti Chandra Ghose was arrested, that he was kept in *hajat* for nearly a month, notwithstanding the fact that respectable witnesses, such as a local Munsif and others, deposed that the accused Kanti Chandra Ghose had one servant, and that he was living, and that subsequently the man who was supposed to be murdered was found living in the Backergunge district? Does the Government approve of the proceedings? If not, will the Government pass such orders as the justice of the case may demand?

The Hon'ble MR. COTTON replied:—

"The attention of Government was drawn to the articles in the newspaper referred to, and a report on the facts of the case has been called for from the Commissioner of Chittagong. The report has been received to-day; as soon as it has been considered by the Government, an answer will be given to the Hon'ble Member's question."

THE BHUTAN DUARS REPEALING BILL.

The Hon'ble MR. BUCKLAND moved for leave to introduce a Bill to provide for the repeal of Act XVI of 1869 (the Bhutan Duars Act). He said:—

This is an Act of special interest only to the Bhutan Duars, and it is not likely that the Council can have much acquaintance with it. I should therefore, perhaps, say a few words with regard to the circumstances under which this Act became law, before asking the Council to repeal it. It will not be necessary to go over the history of the campaign against Bhutan, which took place in 1864-65 in consequence of the treatment that Sir Ashley Eden's mission met with at the hands of the Bhutias. It is sufficient to mention that during the year 1865 the British arms were crowned with victory, and that a treaty of peace was made on the 11th of November of that year with the Bhutan Government; and that, following the threats which had been conveyed to the Bhutan Government of the consequences of their non-performance of the conditions offered to them, it was considered necessary by the Government of the day, by a proclamation, dated the 4th July 1866, to annex to British territory the eighteen *duars*, which are now known by the collective name of the Western Duars: *duars* meaning the gates or passes from British territory into what was then the territory of the Government of Bhutan.

"I have consulted the records of those days, and find it there stated that the Bhutias had left no records, and that they appear to have had nothing which might be called a system of Revenue Administration. When the country was taken over by the British Government, and the district of Jalpaiguri was formed, the Government of the day introduced certain laws and regulations

into the territory thus acquired. Amongst them it appears that the Code of Civil Procedure was extended to that territory, and thereupon the cognizance of all suits of a civil nature became vested in the ordinary civil courts having jurisdiction within the annexed tract of country. Within a very short time a case occurred in which the local civil officer did justice between landlord and tenant. But the case came on appeal to the High Court, and the High Court in their decision intimated that they were satisfied that justice had been done by the local officer, but that in conformity with law they were bound to overrule him. When this matter came before the Government of India, it was thought desirable to legislate with a view to have substantial justice done in the newly acquired territory, rather than strict law administered, and administered unwillingly, as I have stated, by the High Court of the day. A Bill, therefore, which became Act XVI of 1869, was introduced in the Council of the Governor-General in May 1869, by Mr. Frank Cockerell of the Bengal Civil Service; and it might be well that I should read a few lines of the speech the Hon'ble Member made in introducing the Bill, which will, I think, show the Council in a nutshell the objects and reasons of that measure. The Hon'ble Member said :—

'Experience had shown that, in a newly acquired territory, where British Administration had been preceded generally by bad Government, and often, as in the case of Bhutan, by a complete absence of any regularly constituted Government, claims relating to interests in land, or in any way connected therewith, were not satisfactorily dealt with by the ordinary Civil Courts, governed and restricted as those Courts were by the rules of Civil Procedure in their adjudication of all suits and matters coming before them.

'For claims of this kind, whether with regard to the equitable interests of the persons concerned, or the interest of the State which, until the land revenue assessment of the newly-acquired territory was completed, might be said to be interwoven with those of claimants of any right or title in the land, needed to be determined by considerations of expediency and good policy, such as the Civil Courts in the exercise of their ordinary jurisdiction were precluded from entertaining. Hence, in the case of such previous acquisitions of territory as the Panjab and Oudh, the operation of the Code of Civil Procedure was barred as regards claims to any interest in land pending the completion of the land revenue settlement of those provinces, and all claims of the nature referred to were adjudicated in the Court of the Settlement Officer.

'Why this course was not adopted as regards the territory ceded by Bhutan at the time of its annexation, did not appear, but a case had recently occurred which showed conclusively that this measure ought to have been taken when the Code of Civil Procedure was introduced into the annexed province, and should certainly be no longer postponed.'

"Then the Hon'ble Member in charge of the Bill which became Act XVI of 1869 referred to the High Court judgment to which I have briefly alluded. The Bill was then referred to a Select Committee, and the rules which were sent up by the Bengal Government were considered. The rules which were attached to the Act (and which have since performed that function) were meant to provide for cases regarding immoveable property in that territory.

"When the Bill was passed in July, 1869, in the Viceroy's Council, the Hon'ble Member in charge of it dwelt chiefly on the point that the Bill was a temporary measure only intended to provide for a transitional state of things, and the question then was how the Bill should be terminated. The question at issue at that time was whether the Act should be terminated by a published order of the Governor General in Council, or whether it should be left to future legislation to repeal it, and it was decided at that time to take the latter course. It is, therefore, necessary to introduce a Bill to repeal the Act which, as was settled at the time, cannot be repealed or altered merely by an order of the Government.

"Since the passing of Act XVI of 1869 the Jalpaiguri district, which includes the Western, *i.e*, the Bhutans Duars, has become one of importance in consequence of a considerable increase in the population. The census of 1872 showed a population of 100,111, but the census of 1891 showed just a few less than 300,000 inhabitants. Moreover, the district has grown enormously in importance by reason of the vast amount of British capital which has been introduced into it, a number of tea-gardens have sprung up, and there has been a great extension of European industry and enterprise in that territory. It has therefore appeared to the Government for some time past that the Act, which was introduced avowedly for a temporary purpose in dealing with the newly

acquired territory of the eighteen Bhutan Duars, is not adapted to the present state of affairs. It must not be supposed that there is no law in force in the Western Duars portion of the Jalpaiguri district. In 1874 an Act was passed, called the Scheduled Districts Act, by which the Local Government is empowered, with the sanction of the Governor General in Council, to extend to the territories mentioned in that Act, or to any part of them, any Acts which are in force in British India. I have been through the Bengal Code, and I find that at this moment there are in force in the Duars more than thirty different Acts, and among them several very important Acts, such as the Penal Code, the Code of Criminal Procedure, the Code of Civil Procedure to a limited extent, the Police Act, the Transfer of Property Act, and the Contract Act, and it is quite possible, under the Scheduled Districts Act, to which I have referred, to extend to the Duars, with the sanction of the Governor General, any Act which the Government may please. But it is not possible to extend to it the whole of the Code of Civil Procedure as long as Act XVI of 1869 remains on the Statute Book.

"These are the reasons why it is thought necessary to introduce this little Bill. Before anything can be done to empower the ordinary Civil Courts of the country to take up cases connected with immoveable property, it is necessary to repeal Act XVI of 1869. The question has assumed some importance within the last few years, not only on account of the development of English industry, but also because the tea planters have been memorialising the Government for some time with a view to the conversion of this district into what they call a Regulation district. It is obviously impossible to grant that application *in toto*; the district will remain under the Scheduled Districts Act, and it will be a question as to which Acts should be applied in regard to cases concerning immoveable property when Act XVI of 1869 is repealed. This matter will, perhaps, be discussed in Select Committee, but I should inform the Council that the decision lies entirely with the Local Government, who can, with the sanction of the Government of India, introduce such laws as they may think fit when Act XVI of 1869 has been repealed and the ground has been thereby cleared.

"It may be asked why this repeal was not carried out before. Looking at the Statement of Objects and Reasons, I am reminded that for some years past very important settlement operations have been carried out in this tract of country, and it was thought desirable, as long as the settlement was in progress, to defer the repeal of this Act. A Deputy Magistrate and Collector, Mr. Donald Sunder, has as Settlement Officer recently completed this settlement, and has done it very well, and his final report is now before the Government. The Lieutenant-Governor took the opportunity, when the settlement proceedings were drawing to a conclusion, to lay the matter before the Government of India, and their sanction has been obtained to proceed with legislation to repeal Act XVI of 1869. With these observations I move for leave to introduce this Bill."

The Motion was put and agreed to.

The Hon'ble MR. BUCKLAND also applied to the President to suspend the Rules of Business to enable him to introduce the Bill, and to move that it be read in Council.

The Hon'ble THE PRESIDENT having declared the Rules suspended—

The Hon'ble MR. BUCKLAND introduced the Bill and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble MR. BUCKLAND also moved that the Bill be referred to a Select Committee, consisting of the Hon'ble Messrs. Lyall, Beighton and Smyth, and the Mover.

The Motion was put and agreed to.

THE CALCUTTA ELECTRIC LIGHTING BILL.

The Hon'ble MR. COTTON moved for leave to introduce a Bill to facilitate and regulate the supply of electricity for lighting and other purposes in Calcutta. He said:—

"As it is proposed to advance this Bill more than one stage to-day, it will be more convenient, with Your Honour's permission, that I should make such remarks as I propose to address to the Council when I move that the Bill be read in Council.

The Motion was put and agreed to.

The Hon'ble MR. COTTON said:—"The observations which I shall address to the Council with reference to the Bill which has been circulated, will relate, first, to the necessity for legislation on the subject of the supply of electricity; and in the second place to an explanation of the particulars in which the Bill which will be introduced to-day differs from the English Statute Law on the subject. Hon'ble Members are no doubt aware that it is open to any of Her Majesty's subjects to generate and supply electricity for his own purposes—either to use it himself, or to supply it to other places and persons—provided that no injury to the property, convenience, or comfort of any other persons, or to the public, be thereby committed, and provided also that it be not necessary for that purpose to break up the public streets or interfere with any public rights. As far as the supply of electricity is limited to this, no Act of the legislature is necessary. So we have seen that in the town of Calcutta various private installations have been established. There is the installation for the electric lighting of Harrison Road, which is managed by the municipality; electric light is supplied by private installation to the Hooghly Bridge, to the Docks at Kidderpore, to the Bengal United Service Club in Chowringhee, to the Eden Gardens under the control of the Public Works Department, and we have seen temporary installations in the *maidan* for illuminating the skating rink, and in Government House, both on the occasion of the recent investiture and on previous occasions. These are to all intents and purposes private installations which have been carried out without trespassing on public rights, and no legislation has been required to validate them, and if the demand for electricity in the town of Calcutta were limited to isolated cases of this kind, no legislation from the Government would be required.

"The reason for legislation is this: The Government are of opinion, and the authorities whom we have consulted on the subject, viz., the Chamber of Commerce, the Trades' Association, the Calcutta Corporation, and the Commissioners for the Port of Calcutta; these authorities as well as the Government are of opinion that the time has come when the demand for electricity will increase, and that it cannot be adequately supplied, except by the establishment of one or more generating stations which would be in a position to meet the demand. As soon as a scientific agency has acquired commercial value and becomes a means of profit, there arises a class of potential consumers who want to be supplied, and a class of traders who desire to supply such consumers. Hence the public pressure which has been put on the Government to facilitate the introduction of electric lighting; but as consumers cannot be accommodated without projectors interfering with public and local rights, and in particular without their breaking up the streets to the great inconvenience of the public, it becomes necessary for Government, through its Legislative Council, to regulate the supply. This is done by providing that those who undertake to supply electricity, and cannot do so without overriding public and local rights, shall be enabled to do so by legislation passed for the purpose, subject in the interests of the public to legislative restrictions.

"This briefly is the reason of the necessity for legislation in Calcutta, and it is identical with the reason for legislation in Great Britain and in other countries where electricity is now supplied by companies. The history of the English law on the subject is simple. In 1879, an important committee of the House of Commons was convened, under the presidency of Sir Lyon Playfair, to consider whether legislation was necessary to regulate the supply of electricity. It was the opinion of that Committee that the time had not come

for legislation, and although it was foreseen that the time would come quickly, the proposal to legislate was then allowed to drop. The ink with which that report was written was hardly dry before very important discoveries in electricity were made, and in particular the discovery of incandescent light, which enabled electric lighting to be distributed more easily; and as soon as that discovery was made, pressure was again put upon Parliament to legislate for the regulation of the supply of electricity, and then the law of 1882 was passed. That law was substantially still in force, and is the statutory provision upon which the Bill before the Council is based. By that law authority is conferred for the Regulation of the supply of electricity in three ways: first, by a special Act; secondly, by what is known as a provisional order; and thirdly, by license. The meaning of a special Act is of course clear. A special Act is passed in order to enable a particular company to supply electricity subject to such restrictions as that Act may contain. This is a procedure which the Board of Trade have discouraged, and as a matter of fact very few special Acts of this character have been passed. The second procedure, which is described as the grant of a provisional order, is somewhat similar to that of a special Act. Power is delegated to the Board of Trade to prescribe the whole of the procedure under which the undertaking company is authorized to supply electricity, and the details regarding the restrictions to be imposed upon them. A provisional order is an elaborate set of rules which guide and control the company. It has no effect whatever until it is confirmed by a special Act of Parliament. A special private Act is introduced confirming the order of the Board of Trade, and then the order of the Board of Trade has the force of law. The third method is that of a license, which contains details similar to those of a provisional order, but differs from it in some material respects. The Board of Trade, in whose hands the entire administration of this department rests, have always discouraged licenses and have encouraged promoters to apply for provisional orders, and very few licenses have therefore been granted under the Act. Nearly all the companies in England have been enabled to undertake their work by means of provisional orders. I will explain briefly the salient distinctions between a license and a provisional order. A provisional order is without limit of time. A company is granted its rights indefinitely, but there is a clause in the Act of 1882 which empowers the local authority over the area to which the order extends to purchase the undertaking on the expiration of twenty-one years. This period having been objected to by the public, an Act was passed six years afterwards, in 1888, extending the period from twenty-one years to forty-two years, and all provisional orders issued in England now are subject to the right of the local authority, that is to say, the Corporation or County Council, or London County Council, to purchase the undertaking at the expiration of forty-two years. A license is granted for a fixed period of seven years subject to renewal. The advantage of a license over a provisional order consists in the fact that it is not liable to be bought up by the local authority, and also in the fact that a license can be obtained quickly and promptly without the delay of going to Parliament to confirm it, or the risk which every reference to Parliament involves. No further objection is raised. The Board of Trade have the power in their own hands.

"The question came before this Government as to the procedure which should be adopted in India, and it was decided that the form of a provisional order is unsuited to the condition of things prevailing here. There is no Board of Trade under the Government to whom the responsibility of drafting the provisional order can be referred. In Calcutta the Government itself has to exercise the authority which in England is exercised by the Board of Trade. So it was determined that the form of a license would be more appropriate to the condition of things here.

"Then the question of the term of the license came under consideration, and also whether a concession granted under a license should be purchaseable by the local authority or not. In respect of the latter question it was decided that the local authority should have no right to purchase at any time, thereby acting on the same lines as have been adopted in England in regard to licenses. In Calcutta the Municipal Corporation will have no power to purchase any concession granted under this Act.

"The question of the duration of a license involved a further difficulty. It was originally proposed that the duration of a license should be seven years,

the same period as the English Act prescribed. I should have said that the Act of 1882, as it was originally introduced into Parliament, prescribed the period of three years; it was extended to five years by the Select Committee of the House of Commons, and the House of Lords raised it to seven years. The legislation of 1888 did not affect the duration of licenses. This point was, however, taken up both by the Chamber of Commerce and the Trades' Association, and both those authorities have pointed out that seven years was too short a period. And looking to the fact that the license contemplated by this Government is in many respects similar to a provisional order, except that the Government takes the place of the Board of Trade throughout, and also to the obvious consideration that capital will not lend itself to an undertaking unless the permanence of that undertaking is guaranteed, or at all events unless it is guaranteed for a very considerable period, the Government have modified the term from seven years to twenty-one years, as the Council would find in the Bill before them. A license is proposed to last for a period of twenty-one years subject to renewal. It is thought that a period of twenty-one years is sufficiently long to attract capital in India, and as long as it is prudent to grant as the term of any license, especially when it is remembered that the action taken under this Act is necessarily of a somewhat experimental character.

"Turning to the provisions of the Act, I desire to invite the attention of the Council to a few points. You will observe that the short title of the Act is the 'Calcutta Electric Lighting Act.' But in point of fact this Act follows the phraseology, as far as possible, of the English Law. Its object is not to supply electric lighting, but, as you will see from the preamble, it is a Bill to facilitate and regulate the supply of electricity for lighting and other purposes. It is not intended to limit the provisions of the Act to electric lighting in any way. There are other purposes to which I hope electricity will be devoted, and to which companies formed under the provisions of this Act will, I trust, devote their energies. I merely throw out as a suggestion the substitution of electric tramways for the tramways which we see in Calcutta drawn by horses. That would be an immense improvement when the tropical heat of Calcutta is considered. It would be a great benefit both to the public and the wretched horses employed, if electricity could be substituted for the present means of haulage. Throughout the Act you will find that it contemplates the supply of electricity, and not electric lighting only. That in fact is one of the main principles of the Bill, and it follows in this respect the English Act.

"Section 3 of the Bill empowers the Local Government, which, as I have already said, takes the place of the Board of Trade, to grant licenses, and following the precedent of the English Law, it insists on the consent of the local authority being first obtained. Now in England when a license is granted, the consent of the local authority is absolutely a condition precedent. Unless that consent is obtained, a license cannot be given. In the case of a provisional order the Board of Trade are vested with powers to interfere, and, if they see sufficient reason, to overrule any objection which may be made by a local authority. It has been deemed fit to introduce a similar provision in this Bill. The Council will see that there is a *proviso* that if the Local Government, after due enquiry, are satisfied that the local authority has no sufficient reason for withholding its consent, the Local Government may overrule the local authority and grant a license.

"In the amending law, the English Act of 1888, there is a very important clause amending the first Act, which enacts that the grant of authority to an undertaker to supply electricity in any area shall not in any way prevent the granting of a license or provisional order to any other person or authority within the same area; that is to say, this clause legislates against monopolies; it declares that no company shall be granted a monopoly. That clause of the section is not introduced in the present Bill, and it will be for the consideration of the Select Committee whether a similar provision should be introduced by law. But I may point out that although there is no monopoly created by law in England, the Board of Trade have declared again and again—it is one of the rules which guide its procedure—that to all intents and purposes the grant of a provisional order under a public Act is equivalent to a monopoly. They have not as a rule allowed two companies to run within the same local area.

"This Bill, following the English Act, contemplates the grant of licenses for particular areas. As you all know, in London the metropolis is as it were mapped out. Wherever there is a demand for electric lighting the local area is defined, and the provisional order relates to that particular area and no other. In the same way it is contemplated that Calcutta may be mapped out; or it may be possible that one single area may suffice for the whole of Calcutta. These are matters which will have to be considered by the Government before a license is granted. In England the generating stations are sometimes of very vast size, and the largest of all the Electric Companies has, I understand, its generating station in Deptford, seven miles at least from the locality supplied with electricity. This implies that the capital of the company is very large. That is not likely to be the case in this country, but the fact shows that electricity can be supplied for lighting and other purposes from a very considerable distance, and it may be unnecessary to divide Calcutta into different areas, if a company is formed with sufficient resources to afford the supply of electricity which may be required.

"Section 4 of the Bill relates to the making of rules, and section 5 to the conditions to be inserted in the license. The rules are intended to regulate the procedure to be followed in applying for a license. In section 4, by some oversight of the drafter, clause (*a*) has found a place by mistake. It provides for the making of rules for securing the public from personal injury. That is a clause which finds its place in the conditions of the license, and ought to be inserted in section 5 alone. That provision is based on the English law, and has reference to the conditions to be mentioned in the license. I need hardly say that the conditions to be mentioned in the license are an important factor with which the public is concerned The Act itself is a mere skeleton; the flesh and blood will be found in the license to be ultimately granted. The form of a license is identical with the form of a provisional order. There are many such orders granted, and intending undertakers will experience no difficulty in finding what a license is likely to contain. The Board of Trade have prescribed what they call a model provisional order which, subject to such modifications as the conditions of time and place may render necessary, will doubtless be the model upon which licenses will be granted under this section. It is suggested by the Trades' Association that the law should contain a provision for the limitation of the price to be charged for the supply of the electricity. That is a point which will be fully dealt with in the license. The schedule to the model provisional order states the maximum price to be charged. I have seen some provisional orders in which the prices are somewhat different from those contained in the model order, but, whatever the maximum price may be, that is a detail which need not be contained in the Act, but will find a place in the provisional order or license. In the same way the Engineer to the Calcutta Corporation has suggested that provision should be made for the preparation of maps; now, maps are no doubt very necessary, but the law does not provide for them, it is a detail which is left to the framers of the license.

"The sections of the Act which follow, sections 6 to 11, are very important; they relate to the right the undertakers or company who supply electricity have to break up streets and adopt all other measures which are necessary for laying down their works. These provisions are taken with slight modifications from the Indian Gas Works Act of 1857, modified slightly with reference to the English Gas Works Acts of 1845 and 1871. The English Electric Lighting Act merely declares that the procedure under the Gas Works Act for these purposes shall be held to apply.

"Section 13 touches on a very burning question, namely, the right of the undertakers to erect aboveground works, *i.e.*, whether the electric line should go above the road or below it. This is a matter which has been under consideration in England on many occasions. The English Act requires the express consent of the local authority before overhead wires can be erected. It was thought, however, that such sanction would not afford a sufficient guarantee in this country, and in place of the consent of the 'local authority,' he Bill contains the words 'express consent of the Local Government.' There is no doubt that overhead wires are a source of danger. The wire by which an electric current is maintained for the supply of electricity is of different material, and much thicker and heavier than the electric wire used by telephone companies.

It constitutes by itself a source of danger to the public on account of its weight, and in the interests of the companies themselves it has been felt in England that overhead wires are a source of danger, and that mischievous people are apt to cut them, whether it is done to spite a neighbour, or from pure mischief and thus injure the supply. On the other hand, there is some difficulty in the town of Calcutta in regard to underground wires. It is said that the soil, for some reason or other, renders it extremely difficult to lay down underground wires, and to maintain them in proper condition and order, and that is one of the reasons, as I understand, why the Harrison Road installation has temporarily broken down. At all events there is much to be said on both sides, and it is thought advisable to reserve to the Government the power of sanctioning the erection of overhead wires.

"Section 16 of the Bill is of some importance. I invite attention to this section as giving effect to the principle which I explained to you is one of the main principles of the Act, namely, that the Act is not limited to the regulation of the supply of electricity for electric lighting, but to facilitate and regulate the supply of electricity to whatever use it may be put. It lays down that the undertakers are not to prescribe any special form of lamp or burner to be used by any consumer, or in any way to control or interfere with the manner in which electricity supplied by them under this Act is used; that is to say, the consumer, as he is called under the Bill, may utilise the electricity supplied to him in any way he thinks proper. He can use it as a motive power all the day if he can; he can use it as an illuminating agent all night, if he thinks fit to do so. A second proviso has been added in accordance with the suggestion of the Trades' Association, namely, that no lamps or electric fittings shall be added or reduced without due notice being given to the undertakers to enable them to inspect the wires and make such alterations as may be necessary. This clause is not contained in the English Act, and personally I do not think it is a desirable clause. Whether it should be retained or not is a matter which will receive the consideration of the Select Committee; but as it stands I am not sure that it is consistent with the principle laid down that consumers shall do as they please with the supply of electricity given to them. That supply can always be regulated by a meter, with which every house which is supplied with electricity must be furnished.

"Section 24 of the Bill contains a provision to which I invite attention. The concluding part of clause 2 of that section relates to the protection of telegraph lines. The English Law enacts that any difference between a telegraph authority and the undertakers or their agents in regard to telegraph lines shall be determined by arbitration. In place of Arbitrators, the Local Government has been inserted in this Bill. This was a matter which was discussed between the Government of Bengal and the Government of India, and the Government of India declared, in terms which will doubtless commend themselves to Members of this Council, that it would weaken the safeguards of the Imperial telegraph system if questions affecting the safety of that system were left to be determined by arbitration.

"These are the main points contained in the Bill itself to which I deem it necessary to invite the attention of the Council. The Council will understand that where I have not specially referred to them, the provisions of the Bill follow the lines of the English Act modified as may be necessary to suit the conditions of this country. There is one point, however, not taken up in the Bill, but to which the amending law of 1888 refers. Section 4 of the amending Act of 1888 is aimed at a class of persons who may be described as non-undertakers, that is to say, persons who generate electricity, but who do not apply for a license under the law, and who work on their own account. The passing of this Bill, as I have already explained, will not, in the smallest degree, interfere with the operations of private individuals on their own account, or on account of other people, provided that the rights and convenience of other people are not affected. But there are persons who, relying upon the indifference or ignorance of the public, will not hesitate to lay down lines and works in direct communication with a local authority or individuals concerned without having obtained any license, and who are prepared to run the risk which their trespass on public rights may involve. It is to control such operations that section 4 of the

by notice require any persons so using or supplying any electric lines or works to conform to any regulations in the interest of public safety, which may be prescribed, and that in default thereof the removal of such lines or works may be ordered, and heavy penalties imposed. It will be for the consideration of the Select Committee whether a similar clause should not be introduced into this Bill. I am disposed to think that possibly it will be desirable to do so. In England there have been conspicuous cases, as, for instance, the famous Company known as the Sir Coutts Lindsay Company, who started their works as a sort of free lance. They never applied for a provisional order or license, or anything of the sort, but distributed electricity freely, and adjusted all disputes by compromise with the people who were injuriously affected by their works; they promptly compromised not only with local authorities, but also with all individuals who objected to their overhead wires, or to any other proceedings which they adopted. At last the Sir Coutts Lindsay Company, foreseeing difficulties, went into liquidation, and re-opened under the name of the very largest Company which exists, namely, the London Electric Supply Company. But the origin of that Company was irregular, and it gave rise to the clause in the amending Act of 1888 to which I have referred. Other companies followed their example and carried on trade in several places, in Brighton and elsewhere, but they did not succeed; and it is a matter for consideration whether we should not bring similar undertakings, if they should be attempted in India, under regulation and control.

"These are the observations I have deemed it necessary to make in introducing this Bill. I am afraid I have been somewhat tedious, and have addressed you longer than, perhaps, some of you had expected; but I feel that this is a very important measure, and that the meaning of it is, perhaps, not very clearly apprehended, it may be by Hon'ble Members, and certainly not by the public generally: and it is perhaps, therefore, not inconvenient that I should have explained in this Council at some length the objects of the Bill and the character of its provisions. It is very necessary that this Bill should be carefully examined in Select Committee, and I have no doubt this will be done. We cannot but feel that this is the first attempt which has been made in India to meet such a very technical and difficult matter as the regulation of the supply of electricity, and that our present Bill may become the model for legislation in other Presidencies. If such is the case, I can only trust that it will be found a safe model for other legislatures to follow.

"With these remarks, I have the honour to apply to you, Sir, to suspend the Rules of Business to enable me to introduce the Bill, and to move that it be read in Council.

The Hon'ble THE PRESIDENT having declared the Rules suspended—

The Hon'ble MR. COTTON introduced the Bill and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble MR. COTTON also moved that the Bill be referred to a Select Committee consisting of the Hon'ble the ADVOCATE-GENERAL, the Hon'ble Messrs. SMYTH and WOMACK, the Hon'ble Babu SURENDRANATH BANERJEE, and the Mover.

The Motion was put and agreed to.

THE BENGAL SANITARY DRAINAGE BILL.

The Hon'ble MR. LYALL moved that the Hon'ble Messrs. BOURDILLON and BEIGHTON, and the Hon'ble MAULVI MUHAMMAD YUSUF KHAN BAHADUR, be added to the Select Committee on the Bengal Sanitary Drainage Bill.

The Motion was put and agreed to.

THE CALCUTTA PORT ACT, 1890, AMENDMENT BILL.

The Hon'ble MR. RISLEY moved for leave to introduce a Bill to further amend the Calcutta Port Act, 1890.

The Motion was put and agreed to.

The Hon'ble MR. RISLEY also applied to the PRESIDENT to suspend the Rules of Business to enable him to introduce the Bill and to move that it be read in Council. He said:—

"On the last occasion when the Calcutta Port Act came under amendment, at the meeting of this Council on the 13th of April last, I explained that the amendment which I have now to introduce formed part of the original proposal to amend the Port Act. It was, however, introduced at a comparatively late stage, after the proposal as a whole had been referred to the Government of India for the consideration of the Secretary of State, and this particular amendment was held to be of a sufficiently important character to render it necessary to make a further reference to the Government of India and the Secretary of State. That is the reason why this amendment was not introduced with the group of proposals which the Council then had before them.

"I will now explain as briefly as possible the reasons which render this particular amendment of the Port Act necessary. The Port Commissioners possess a large amount of land adjoining their foreshore. This land is vested in them; they have let out portions in plots to various persons, and on such portions and plots shops, huts, and so forth have been built. Up to the time when the Calcutta Port Act of 1890 was passed, and probably for some time afterwards—as far as I can make out from the papers—these huts and shops, together with the portions of land on which they stand, were assessed for the purpose of municipal taxation under what are called the bustee provisions of the Calcutta Municipal Act. That is to say, the Port Commissioners were treated in the same way as the owners of bustee lands in other parts of Calcutta. They were called upon to supply the information necessary to enable the valuation to be made. The entire amount of the assessment was, in the first instance, collected from them, subject to a deduction of one-eighth to cover the cost of collection, and they were enabled afterwards to collect from the owners of the huts and shops, and so forth the entire amount of municipal assessment on these buildings, and half the amount of municipal assessment on the land on which they stood.

"With the passing of the Calcutta Port Act of 1890, all this came to an end. Section 59 of that Act provides a special procedure for valuing the Port Commissioners' property for the purposes of municipal assessment. Their entire property, the docks, machinery, land, and so forth, is valued with reference to the expenditure which has been incurred upon it, and five per cent. on the aggregate expenditure is taken to be the annual value of the property, and on that annual valuation the municipal rates are assessed at the rates authorized by the Calcutta Municipal Act. The practical result of this, with reference to those huts, is that from the passing of the Port Act they could neither be valued for the purposes of municipal taxation, nor could any tax be assessed upon them.

"There are two possible modes of procedure by which these huts can be dealt with for purposes of municipal taxation. One is the procedure laid down in the Municipal Act for dealing with bustee property; the other the procedure authorised in the case of ordinary properties. The bustee procedure could not be applied, because it contemplates assessment and collection through the owners of the land. The owners of the land in this case are the Port Commissioners, and they having already been assessed on their lands it was held by learned Counsel to whom this question was referred that they could not be assessed again. The other possible procedure—and this experiment was actually tried by the Corporation after they tried the bustee procedure and failed—was to deal with these huts and shops under sections 101 and 102 of the Calcutta Municipal Act as ordinary buildings. Here they were met by another difficulty which proved equally insurmountable. Section 122 of the Municipal Act provides

two methods of assessment for ordinary buildings. One of these methods is by taking the annual value to be the gross annual rent at which the house may be let or may be reasonably expected to let. But it is stated that the houses in question are not let, and are not built for letting purposes; consequently the procedure on the basis of the annual rental is not applicable. There is also a procedure, the second mode of valuation, which takes a percentage of the present cost of construction as the annual value, and enables the municipal tax to be assessed on that valuation. But it was held by Counsel that this procedure also, which was the only resource left to the Corporation of Calcutta, was inapplicable. The matter being important, and the opinion somewhat technical, I will read to the Council the relevant portion. MR. WOODROFFE says:—

"It is, however, suggested that inasmuch as the Commissioners of Calcutta are empowered under section 101 of Act II (B.C.) of 1888 to impose rates upon all houses and lands within the town of Calcutta, and under section 122 for the purposes of assessment under that Act to fix the annual value of any house not built for letting purposes and not ordinarily let at 5 per cent. on the sum obtained by adding the estimated present cost of building such house, less a reasonable amount to be deducted on account of depreciation to the estimated value of the land with the houses as part of the same premises, they can, for the purposes of the assessment of these houses or huts built by the owners thereof on land of the Port Commissioners, which has already been assessed, fix their annual value by reference to the cost of their materials without inclusion of the value of the land wherein they are built, and which having been already assessed cannot be reassesed. This, in my opinion, the Commissioners of Calcutta cannot do."

"Section 122 does not authorise any such mode of valuation". The learned Counsel does not state in detail the reasons which led him to arrive at that conclusion, but on looking at the section it seems probable that the difficulty comes in from the peculiar wording of the latter portion, which renders it impossible to separate the cost of building a house from the cost of the land. If you could deal with these factors separately, there would be no difficulty in doing what the Corporation proposed. But as Counsel has held that it is impossible to do that, the necessity arises for changing the law.

"The result of this failure to proceed under any law at present in force is that the Corporation stand to lose, and have actually lost, I understand, in the past two years or so, a matter of Rs. 20,000 or Rs. 25,000 a year. The Bill proposes to get rid of this complication by inserting two sections, not in the Calcutta Municipal Act, but in the Calcutta Port Act, empowering the Municipal Commissioners to deal with buildings which stand on the lands of the Port Commissioners, quite irrespective of the value of the land. Five per cent. on the cost of building will be taken as the annual valuation, and the Municipal tax will be assessed on that valuation. For the recovery of the Municipal tax these sections provide that they are to have such remedies, powers, rights and authorities as they possess under the Municipal Act. I understand that these sections were drafted by the legal advisers of the Corporation, and its terms seem sufficient for the purpose. The question of this legislation was referred, before these sections were imported into the despatch sent to the Government of India, to the Port Commissioners who said they had no objection, provided another section was added, which provides for their recovering half the consolidated rate paid upon the land. Under the Port Act, as I have already explained, the Corporation claim a consolidated rate on the amount expended in the first instance by the Port Commissioners on their land, and the effect of this section will be merely to put the Port Commissioners in the same position as all other owners in Calcutta who recover half the Municipal taxation from their tenants.

"That disposes of the two sections, proposed to be inserted by section 3 of the Bill, which constitute the main object of legislation at the present time. It is proposed, however, to take advantage of the opportunity of amending the Act to make a formal, but what appears to be a decidedly necessary amendment in sections 35, 105, and 126 of the Port Act, in which where the word "Tramway" is used, the word "Railway" should be substituted. When the Act of 1890 was passed it appears to have escaped the notice of the framers of the Act, and also the notice of those who had to deal with the amendment of the Act in April last, that ever since the 4th of June 1880 the Port Commissioners' tramway has, in fact, been a railway. On that date by a notification under section 4 of the Indian Railway Act of 1879, which corresponds with section 16

of the Railway Act now in force, that Act was extended to the railway belonging to the Commissioners for making Improvements in the Port of Calcutta. This was done at the request of the Port Commissioners themselves, who applied to the Government in the middle of 1879, and requested that their tramway might be brought under the operation of the Railway Act then in force (Act IV of 1879). They proposed, it is true, that it should be done by a notification under section 54 of the Act, but the Government of India seem to have been of opinion that that section was not applicable. It is section 54 of their Act, which provides that steam tramways might be held to be railways. The Government of India held that the Port Commissioners' Railway was not and never could be described as a tramway, and they made the notification under the section empowering the Port Commissioners to use locomotive power on their 'railway,' and ever since that time, the so called tramway has been a railway. So the proposed change in the Act consists simply of the substitution of the word 'Railway' for 'Tramway,' the object being to bring the Port Act into accord with the Railway Act and to remove any doubts which may exist as to the legal status of the Port Commissioners as regards the carriage of goods and business transaction with other railways."

The Hon'ble THE PRESIDENT having declared the Rules suspended—

The Hon'ble MR. RISLEY introduced the Bill and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble MR. RISLEY also moved that the Bill be referred to a Select Committee consisting of the Hon'ble the ADVOCATE-GENERAL, the Hon'ble MESSRS. SMYTH and WOMACK, the Hon'ble RAI DURGA GATI BANERJEA BAHADUR, the Hon'ble BABU SURENDRANATH BANERJEE and the Mover.

The Motion was put and agreed to.

The Council adjourned to Saturday, the 13th instant.

C. E. GREY,

CALCUTTA;
16th July, 1895.

Offg. Assistant Secretary to the Govt. of Bengal,
Legislative Department.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 *and* 1892.

The Council met at the Council Chamber on Saturday, the 13th July, 1895.

Present:

The Hon'ble Sir Griffith Evans, K.C.I.E., Offg. Advocate-General, *presiding.*

The Hon'ble H. J. S. Cotton, C.S.I.

The Hon'ble D. R. Lyall, C.S.I.

The Hon'ble J. A. Bourdillon.

The Hon'ble C. E. Buckland, C.I.E.

THE BENGAL SANITARY DRAINAGE BILL.

The Hon'ble Mr. Lyall presented the Final Report of the Select Committee on the Bengal Sanitary Drainage Bill.

The Council adjourned to Saturday, the 20th instant.

C. E. GREY,

Calcutta; *The* 16*th July*, 1895.

Offg. Assistant Secretary to the Govt. of Bengal, Legislative Department.

LUTION ON THE REPORT OF THE LEGAL AFFAIRS OF THE GOVERNMENT OF BENGAL FOR THE YEAR 1894-95.

No. 3858J.

RESOLUTION.

JUDICIAL.

Calcutta, the 15th July 1895.

READ—

The Report on the Legal Affairs of the Government of Bengal for the year 1894-95.

Read also—

The Reports of the two previous years and the orders of Government thereon.

IN view of a representation made by the Legal Remembrancer in his report for last year, the date fixed for the receipt of this report by Government was changed from the 1st May to the 15th May. This report was therefore due on the 15th May, but it was not received in this office till the 24th June. The Legal Remembrancer again adverts to the difficulty of submitting it in time, and the disadvantage at which he is placed by a hurriedly-prepared and insufficiently-considered report. The Lieutenant-Governor recognizes the force of these representations, and the question will be further considered by Government.

2. The appeal, which was referred to in the report for last year as pending before the Privy Council, has remained undecided. During the year under report one fresh appeal, in which the Syedpur Trust Estate is the respondent, has been filed before the Privy Council.

3. The subjoined table compares the results of Government litigation in all the Civil Courts of Bengal during 1894-95 with those of the two preceding years:—

	Original cases.			Appeals— Before Lower Courts.			Appeals— Before High Court.			Total.		
	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.
1	2	3	4	5	6	7	8	9	10	11	12	13
Decided in favour of Government.	336	209	110	44	47	45	11	27	18	391	283	173
Decided against Government	116	63	36	12	7	12	6	11	2	134	81	50
Compromised, remanded, or withdrawn.	108	46	13	8	18	8	4	6	4	120	70	25
Percentage in favour of Government.	74·4	76·8	75·3	78·5	87·03	78·9	64·7	71·05	90·	74·5	77·7	77·5

Excluding cases under the Land Acquisition Act, the figures are as under:—

	Original cases.			Appeals— Before Lower Courts.			Appeals— Before High Court.			Total.		
	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.
1	2	3	4	5	6	7	8	9	10	11	12	13
Decided in favour of Government.	145	104	86	44	47	45	11	27	17	200	178	148
Decided against Government...	52	40	36	12	7	12	6	9	1	72	56	49
Compromised, remanded, or withdrawn.	8	21	12	8	18	7	4	5	4	20	44	23
Percentage in favour of Government.	73·6	72·2	70·4	78·5	87·03	78·9	64·7	75	94·4	73·5	76·06	75·1

The remarkable decrease in Government litigation during the year is ascribed to the unusually small number of land acquisition cases. This no

doubt is the principal cause, but the figures show that excluding such cases there has been a satisfactory decrease in the number of original cases during the past three years.

4. Only two cases were decided adversely to Government in the High Court. In the lower appellate courts twelve cases were decided against Government, but only five of these were conducted after reference to the Legal Remembrancer. That officer remarks that "this complete disregard of the clear and distinct rules for the conduct of civil suits and appeals fully accounts for the unfavourable results." Sir Charles Elliott takes this opportunity of directing attention to the standing orders on this subject, and warns Collectors that if, in transgression of the rules, they take upon themselves the responsibility of filing Government appeals without consulting the Legal Remembrancer, they render themselves liable to be held personally responsible for any loss which may be incurred by the Government. Out of 36 cases decided against Government in courts of first instance, four were not reported to the office of the Legal Remembrancer. But it is not satisfactory, to find that 32 cases, which were so reported, should have been lost. Mr. Beighton assigns two causes for this result. He writes: "Instead of ascertaining and committing to writing precisely what the witnesses to be examined on behalf of Government are prepared to say, too much reliance is placed on the reports of local officers, who, without examining the witnesses themselves, content themselves with a vague assurance that certain facts will be established in evidence," and he adds that it is a matter of common occurrence for the papers to reach his office so late that he has often to decide important questions, on which his opinion and advice are sought, on imperfect materials and without the proper time for deliberation that the nature of the case demands. The Lieutenant-Governor has read these remarks with regret, as disclosing what he must look upon as serious neglect on the part of Collectors whose duty it is to safeguard the interests of Government by every precaution in their power.

5. The following statement shows the results of Court of Wards' litigation during the last three years in all Courts:—

	1892-93.	1893-94.	1894-95.
1	2	3	4
Decided in favour of Court of Wards	654	1,322	1,561
Decided against ditto	73	133	215
Compromised, remanded or withdrawn	66	55	49
Percentage in favour of Court of Wards	89·9	90·8	87·8

There has again been a considerable increase in litigation, chiefly in the courts of first instance, for which no reason is given. Of 25 cases decided in the High Court, 11, or almost half, were decreed against Government. Nine of these cases were instituted by the Tikari estate in Gaya for the recovery of certain charges which were held to be *abwabs*, and hence illegal. In the lower Appellate Courts, 35 cases were decided against the Court of Wards, mostly suits for the recovery of rent and dák and other cesses, for establishment of occupancy rights, and for setting aside sales held under the certificate procedure. Of 169 cases decided adversely in courts of first instance, the Court of Wards was plaintiff in 59 cases and defendant in 110. The most important of the cases decided against Wards' estates during the year was a suit brought by Rani Parbati Kumari against the minor proprietor of the Jambuni estate in Midnapore for possession of the whole of the estate, claiming it under the Dayabhaga law. The Court of Wards, on behalf of the minor, urged that the family has all along been under the Mitakshara law, but the Subordinate Judge decreed the suit in favour of the plaintiff. An appeal against this decision is about to be preferred to the High Court.

6. The following figures show the extent to which decretal amounts due to Government have been realised in 1894-95 and the two previous years :—

	1892-93.	1893-94.	1894-95.
1	2	3	4
	Rs.	Rs.	Rs.
1. Amount under realisation	42,017	47,190	34,726
2. ,, realised during the year ...	12,616	8,943	6,034
3. Percentage of recovery	29·5	18·9	17·3

The net balance outstanding at the close of the year was Rs. 27,164. Since 1891-92, when the percentage of recovery was 45·25, there has been a very marked falling off in the realisations effected. The Legal Remembrancer has recently submitted a proposal to Government for appointing a special officer for the purpose of realising the arrears, and he has dwelt at some length in this report upon the necessity of adopting fresh measures. These proposals, which can not conveniently be dealt with in an annual report, have received the separate consideration of Government. The districts noted in the margin show the heaviest outstanding balances. No progress appears to have been made since last year in the Sonthal Parganas, and the Lieutenant-Governor trusts that energetic measures will be taken by the Deputy Commissioner to show better results.

	Rs.
Sonthal Parganas	14,845
Faridpur ...	4,741
Hooghly ...	2 373
Saran ...	2,137

7. The subjoined table shows the amount of Wards' decrees realised during the corresponding periods:—

	1892-93.	1893-94.	1894-95.
1	2	3	4
	Rs.	Rs.	Rs.
1. Amount under realisation	9,83,675	10,80,794	8,83,083
2. Amount realised during the year ...	1,59,690	2,00,671	1,51,139
3. Percentage of recovery	16·25	18·56	17·11

In the Burdwan Raj Estate, out of a balance of Rs. 2,32,222, only Rs. 68,670 were realised; while in the Tikari Raj Estate, out of a balance of Rs. 3,18,870, only Rs. 48,758 were realised during the year. A list of 11 other estates has been given in which the realisations have been exceptionally unsatisfactory. Sir Charles Elliott fails to see in these figures any evidence of an endeavour to improve on the unsatisfactory results of previous years, which have been so repeatedly adverted to by Government, and is unable to believe that due attention has been devoted to this important branch of the administration of Wards' Estates. The notice of the Board of Revenue will again be invited to the subject.

ORDER—Ordered that a copy of this Resolution be forwarded to the Superintendent and Remembrancer of Legal Affairs and to the Solicitor to Government, for information.

Ordered also that a copy of the Resolution be forwarded to the Revenue Department of this Government and to the Board of Revenue for information.

Ordered also, that a copy of the Report and of the Resolution be submitted to the Government of India, in the Home Department, for information.

Ordered also that a copy of the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Chief Secretary to the Govt. of Bengal.

REPORT ON THE WORKING OF THE WARE-HOUSES IN CALCUTTA FOR THE YEAR 1894-95.

THE following report is published for general information.

H. H. RISLEY,
Secy. to the Govt. of Bengal.

No. 197-J., dated Calcutta, the 8th July 1895.

From—J. G. RITCHIE, Esq., Chairman of the Corporation of Calcutta,
To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit the following report, under section 41 of Act I of 1893 (B.C.), of the warehouses in Calcutta for the year ended 31st March 1895.

2. The Commissioners at their Ordinary Monthly Meeting held on the 7th June 1894, fixed the fees leviable under section 10, Act 1 of 1893 (B.C.), for 1894-95, at the rate of 10 per cent. on the annual valuation of warehouses, and the fees commenced to be levied at that rate from the 29th of June 1894.

3. The license fees for 10 jute warehouses that had remained unpaid for 1893-94, were realised in the year under report.

4. The following statement shows the number of applications for license received and their result:—

Applications.						
Pending since last year.	Received during the year.	Total.	Nature of application.	Number sanctioned.	Number refused.	Number pending.
1	2	3	4	5	6	7
12	108	120	Hay, wood, &c.	111	2	7
1	17	18		10	3	5
Total ... 13	125	138	.....	121	5	12

5. During the year under review 11 licenses were issued for 1893-94 and 278 for 1894-95, and the following statement shews the aggregate amount of receipts up to the end of the year:—

	Rs.
License fees for 1893-94	990
Ditto for 1894-95	24,962
Mutation fee	135
Amount of fines	396
Total ...	26,483

6. The year under review being the first of the operation of Act I of 1893, all warehouses liable under the Act could not be licensed within the year, and about 350 warehouses yet remained to be licensed when the year came to a close. Most of these warehouses, however, have since been licensed.

7. The following statement shews the receipts and disbursements of the Warehouse Fund during the year 1894-95:—

Receipts.	Amount.	Total.	Expenditure.	Amount.	Total.
1	2	3	4	5	6
	Rs. A. P.	Rs. A. P.		Rs. A. P.	Rs. A. P.
To license fees for jute warehouses	25,927 0 0		By contribution paid to Commissioner of Police for jute license fees for 1893-94	19,854 3 7	
Ditto for 1st quarter, 1893-94 ...	25 0 0		Ditto ditto for 1894-95 (exclusive of Rs. 23,750 paid from General Fund)	19,948 0 0	
Miscellaneous receipts	531 0 0	26,483 0 0			39,802 3 7
Balance at the commencement of the year—			Balance at the close of the year—		
Cash in the Bank of Bengal...	19,936 0 5		Cash in the Bank of Bengal...	6,364 8 0	
Less due to General Fund ...	101 12 10		Ditto with Treasurer. ...	55 8 0	
		19,834 3 7		6,420 0 0	
			Due from General Fund	95 0 0	
					6,515 0 0
Total ...	.....	46,317 3 7	Total ...	.....	46,317 3 7

8. Appended is a complete list of warehouses in Calcutta licensed during the year 1894-95.

List of Warehouses other than Jute licensed in 1894-95.

The 13th May 1895.

PRATAPA CHANDRA GHOSH,
Registrar of Companies.

WEATHER AND CROP REPORT.

For the week ending the 15th July, 1895.

Burdwán.—Rainfall at Burdwan 3·19. Weather hot. Rain urgently wanted. Condition of cattle good. Fodder and water sufficient. Common rice sells from 10 to 20 seers per rupee.

Midnapore.—Rainfall at Sadar ·84. Weather hot. More rain wanted. Agricultural operations progressing. Prospects of indigo, *til* and sugarcane good. Rice sells from 16 to 24 seers a rupee.

24-Parganas.—Rainfall at Sadar ·04. Weather seasonable. Prospects of crops fair. Transplantation of *aman* retarded for want of rain. Condition of cattle good. Fodder and water sufficient. Rice sells at—

	Srs. c.	
Sadar	11 to 13 0	per rupee.
Barasat	15 0	
Basirhat	18 13	
Diamond Harbour	15 0	

Murshidabad.—State of mulberry and sugarcane favourable. Indigo backward. *Bhadoi* paddy and jute plants are promising. Transplantation of *aman* going on. Rain much wanted. Fodder sufficient. Common rice sells at 15½ seers per rupee.

Khulna.—Rainfall at Khulna ·29, Bagerhat 1·11, Satkhira ·87. Weather hot. Cultivation of land for *aman* in progress. Prospects of crops good. Price of common rice 16 to 22 seers per rupee. Fodder and water sufficient.

Dinajpur.—Average rainfall 8·84. Weather hot and rainy. Price of common rice 14 to 15 seers a rupee. Outbreak of cattle-disease reported from Thakurgaon. No complaint for fodder or drinking water.

Rangpur.—Average rainfall 11·05. Continuous rain throughout the week. Transplantation of *aman* rice in progress. Damage caused by floods in the east of the district. Fodder sufficient. Price of rice 11 to 15 seers per rupee. Prospects hopeful.

Pabna.—Rainfall ·99. Weather hot and cloudy. Prospects of crops good. More rain wanted. Common rice selling at 17 seers per rupee at Sadar and 14 seers at Sirajganj. Fodder and water sufficient.

Dacca.—Rainfall ·63. Weather cloudy and showery. Prospects of *aman* and jute good, but more rain wanted. *Aus* and *til* are being harvested. Common rice sells at 19 seers per rupee. No cattle-disease. Fodder plentiful.

Chittagong.—Rainfall 1·43. Weather hot. Cultivation of *aman* retarded for want of rain. Prices steady. Water and fodder sufficient. Cattle-disease continues.

Patna.—Rainfall 1·95 at Sadar; deficient at Barh and Bihar. *Bhadoi* crops and paddy are being sown. Transplantation of *marua* nearly completed. More rain needed for transplantation of paddy. Fodder and water for cattle sufficient. Common rice selling from 17 to 18 seers per rupee.

Gaya.—Rainfall at Sadar 2·45, Nawada ·63, Jahanabad 1·04, Aurangabad 1·50. Want of rain felt in Nawada. *Marua* millet still being transplanted. Paddy and maize being sown. Price of common rice 15 seers per rupee at Sadar and 16 seers at sub-divisions. Fodder and water-supply ample.

Champaran.—Rainfall at Motihari 11·99. Sowing of *aghani* crop going on. Common rice sells at 14½ seers a rupee. Fodder and water for cattle sufficient.

Darbhanga.—Rainfall 5·26. Transplantation of paddy in progress, but more rain still wanted. Fodder and water sufficient. Common rice selling from 16 to 18 seers per rupee.

Bhagalpur.—Rainfall 4·05. Weather hot and rainy. Abundant rain last week. Prospects of crops favourable. Cattle-pox reported from one village in Madhipura; disease abated in Banka. Price of common rice 17 seers 10 chitaks per rupee. Fodder and water sufficient.

Purnea.—Rainfall 5·84. Heavy rain throughout the district. Transplantation of *aghani* going on briskly. Prospects of *bhadoi* and jute good. No cattle-disease. Fodder and water sufficient. Common rice selling from 15 to 22 seers a rupee.

Cuttack.—Rainfall 3·68. Weather seasonable, but more rain is beginning to be required in parts. Weeding of *beali* going on. Paddy seedlings destroyed in places by floods. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 24 seers per rupee.

Hazaribagh.—Rainfall at Sadar 1·08. Sufficient rain all over the district. Weather seasonable: sunshine and clouds alternating. Sowing of *bhadoi* crops still in progress. Transplanting of paddy and *marua* commenced in places. Prospects good. Fodder and water ample. Common rice selling from 13 to 16 seers per rupee.

General Summary.—The week was characterized generally by fine weather and an absence of rain; but in North Bengal and in Champaran the rainfall was abundant, and in other districts of Bihar and in Bhagalpur and Purnea there were fairly heavy showers. In Rangpur the very heavy downpour is reported to have caused floods in places. *Aus* rice and jute are generally reported good, but the cultivation of winter rice is retarded in many districts for want of rain. In the Patna Division the sowing of the *bhadoi* crops and paddy is in progress, and the *marua* is being transplanted. Cattle-disease is still reported from Dinajpur, Chittagong and Bhagalpur. The price of common rice continues almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 16th July, 1895.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

Results of the Meteorological Observations taken at the Alipore Observatory from 7th to 13th July 1895.

The total fall from 1st January to 13th July 1895	17·22
The average fall of the corresponding period for 24 years, Surveyor-General's Office	26·95

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 83, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; d, dew.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 15th July 1895.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF JUNE 1895.

THE chief peculiarities in the weather which obtained during June are:—

1. The high pressure which prevailed over the province, and the consequent uniform distribution over the area, including the Bay as well as the land.

2. The easterly winds which were due to the pressure distribution, and the westerly deflection of the moist current from the Bay towards the Orissa coast.

3. As this was much more marked during the present year than is usually the case, weather has been less cloudy in Assam, North Bengal, and also in East Bengal, and temperature has been higher, as compared with the normal, than in the western districts.

4. The influence of the pressure distribution is, however, much more marked in the rainfall distribution, as the average fall in East and North Bengal is less than half the normal, while in Orissa it is more than double, and very little short of 20 inches. The difference in the other districts is small, but there is excess in Chota Nagpur and part of South-West Bengal and defect in Bihar.

5. The first storm of the monsoon season became fairly well defined on the 17th, and soon afterwards crossed the Orissa coast. The second depression of any importance was towards the end of the month, and it also developed in the north-west angle, but crossed the coast between Saugor Island and Balasore.

During the intervening days a shallow low pressure area remained in the south-western districts or the north-west angle of the Bay, altering its position irregularly with the small pressure changes which then obtained. At one time it was over South-West Bengal, at another in the angle of the Bay, and again in Orissa. Though it had little influence in causing disturbed weather, the light cyclonic circulation gave rise to heavy rain in the parts affected. It ultimately appeared to develop into the storm at the end of the month.

During the first half of the month there were few changes of importance. Pressure continued high, and fine weather generally obtained. Local changes resulted in thunderstorms which caused occasional heavy rainfall, but throughout this part of the month, the average fall was below the normal over the whole province, more so in the second than the first week, and especially in the north and east. An important difference is shown in the changes which took place during these two weeks. As a rule, at this season of the year any change in weather is first felt in the eastern districts, and from there spreads westwards over the province. This arrangement obtained in the first week, as far as rainfall and temperature were affected. But during the second, though pressure remained very high at all stations, the slow downward change which then set in, somewhat more rapidly in Assam and North Bengal, was followed by westerly winds and a series of thunderstorms which began in the west and extended towards the north-east. A fall of temperature followed the rainfall, beginning in the south-west and advancing towards the north-east, and by the 11th there was defect in mean temperature over the whole province except in North Bengal and part of Assam, where there was still excess of two or three degrees.

As pressure continued to give way over Bengal and Assam, readings became relatively low in the east, and westerly winds set in, at first in Assam, and afterwards over the whole of the province of Bengal. On the 12th, directions were south-west or west in East Bengal and Assam, and on the 13th the only easterly winds were reported from the west of Bihar. When this westerly current became general, temperature rose steadily, and fine calm weather prevailed for two or three days, but a second series of thunderstorms moved across the province from the south-west on the 14th and 15th, being on the latter date confined chiefly to Bihar and North Bengal.

The steady fall of pressure which had continued with little interruption during the second week almost entirely removed the large excess which had previously obtained, and at the same time a depression began to form in the east of the Bay. Strong westerly winds were blowing across the south of the Bay towards the low pressure area, which moved slowly towards the north-west and became well defined not far from the Orissa coast about the 17th. The wind system over Bengal again became easterly as the depression moved northwards, and this easterly circulation was an important feature of the weather during the latter half of the month, as to its steady existence the irregular distribution of the rainfall appears to be due.

The depression became better defined on the 17th, and the cyclonic circulation more regular. On the 18th its centre was not far from the Orissa coast, and though the downward changes of pressure were only slow in the west of the Bay, the depression had concentrated in consequence of a rise which had prevailed both to the north-west and south-east of it. This rise was rapid in the south of Burmah and brisk in the west of Bihar. On the morning of the 19th the centre of the depression was still to the east of Orissa, but about noon it crossed the coast between False Point and Puri, moving in a westerly direction. The fall of pressure had remained slow in the north-west angle of the Bay. On the other hand, the rise was again rapid in Burmah, and gradients were much steeper over the Bay. Strong winds developed and followed the depression into the north-west angle, while the steeper gradients over the province were attended by strong easterly winds at all stations. General rain fell on the 19th, the heaviest being in Orissa near the centre of the disturbance.

After the centre crossed the coast the depression soon filled up, and the squally weather moderated very quickly—a change which was probably due to the recovery of pressure which had followed the disappearance of another depression on the west coast of India. This rise

which appeared over the north of the Bay and South-West Bengal on the 21st. On that day there was a rapid rise of pressure in Orissa and Chota Nagpur, and a brisk fall over Assam and North Bengal. Probably it was owing to the irregularity of these changes that this low pressure area formed, but it was attended by a cyclonic circulation of light winds and by heavy rainfall in South-West Bengal and the east of Chota Nagpur. Meanwhile in North Bengal rainfall had to a large extent ceased, and though still general in East Bengal, it was light. In North Bihar also, owing to the northerly winds due to the pressure distribution, rainfall was becoming scattered. On the 22nd, the low pressure area was in the north of South-West Bengal. On the 23rd a rapid but local fall of pressure over Orissa transferred it to that area and the adjacent part of the sea. On the 24th it was not far from Chaibassa, but it had become very diffused. On the 25th there was a slow rise of pressure in Orissa and Chota Nagpur, and a slow fall elsewhere—changes which, though unimportant in themselves, appear to have led to the beginning of the cyclonic storm which controlled the weather during the last few days of the month. The immediate result of the changes was a diffused depression again over the north-west angle of the Bay. Winds were again cyclonic there and easterly inland, but the depression was so slight that defect was only ·05 inch in Bengal, Arakan and Orissa, while further south readings were nearly normal. During these days unusually fine weather prevailed over a great part of the province. The skies were lightly clouded, rainfall scattered, and temperature about 2° above the normal.

On the 26th a fairly rapid fall of pressure prevailed in the east of the Bay and led to defect of between ·1 inch and ·15 inch over the part of the Bay between Orissa and Arakan. The depression became more distinct, with its centre in the north-west angle, and cyclonic winds prevailed over a considerable area, of moderate strength in the south of the Bay, but very light on its northern side. During the next two days it slowly changed its position, but steadily developed, and weather became squally over the greater part of the Bay. Wind remained south-westerly at Diamond Island, and increased daily in strength, the highest velocity being 20 miles an hour on the 27th and 28th. As the area of lowest pressure moved slowly to the north-westward, very heavy rain fell in Orissa. On the morning of the 27th, Puri reported nearly 8 inches and Cuttack 3 inches. On the 28th pressure fell rapidly at Saugor Island and Balasore, and the centre of the depression passed the coast line between these two stations some time during the day. The lowest readings of the barometer were under 29·2 inches, and the greatest defect was about a third of an inch. On the 29th the centre was near Chaibassa, moving rather rapidly towards the north-west. On the 30th it had entered the North-West Provinces, and pressure was rising very rapidly in Chota Nagpur and South-West Bengal and changing slightly in Bihar.

While the depression was deepening in the north of the Bay, gradients became gradually steeper over Bengal. On the 26th the difference between the lowest and highest readings at Saugor Island and Jalpaiguri, respectively, was only ·08 inch. On the 27th it had increased to ·14 inch, on the 28th to ·27 inch, and on the 29th the difference between Chaibassa and Dhubri was about ·35 inch. This steady steepening of the gradient from north-east to south-west led to strong winds over the whole province. Rainfall was light in all districts except Orissa, Chota Nagpur, and the adjacent part of South-West Bengal.

After the centre of the disturbance crossed the coast, strong southerly winds blew on the coast of Orissa and at Saugor Island. The squally weather, however, which followed the area of lowest pressure continued in the north-west angle for but a short timee, as the pressure distribution recovered more rapidly than usual.

Pressure in the early part of the month remained high over the whole province, and as excess diminished towards the south of the Bay, where it was very slight, the distribution was unusually uniform. From the 9th to the 17th readings steadily diminished, and the difference from the normal was then small in Bengal, but was over ·15 inch in the east of the Bay, where the first depression was developing. After that the downward changes were slow even near the centre of the disturbance, and the recovery was complete on the 21st. From the 22nd to the 27th changes were never large, but they were more irregular than usual, and generally with a downward tendency. As the second depression developed, readings became very low in South-West Bengal and Orissa, and on the morning of the 28th, shortly before the centre crossed the coast, there was defect of ·3 inch at Saugor Island and Balasore. On the 29th it was still falling in Chota Nagpur, but on the 30th the recovery was very quick, the rise being a quarter of an inch in Chaibassa. Mean pressure for the whole month is above the normal at all stations, by about ·01 inch in Orissa, and by slowly increasing amounts towards the north, where it is ·05 inch.

Temperature has been below the normal in the south-western districts and generally high in the east and north. In the early part of the month there was a fall in North Bengal and Assam, when thunderstorms occurred in these parts, but during the latter half there was an almost steady excess of one or two degrees. In the south-western districts defect was as much as 5° when the depressions were crossing these parts, and generally throughout the month there has been a small defect. The means for the month are below the normal in Orissa, Chota Nagpur, and South-West Bengal by about 1°, and above in the other districts, by 0°·7 in East Bengal and Bihar, by 1° in North Bengal, and 1°·7 in Assam.

Rainfall.—As stated above, the rainfall distribution has been very different from that usual during June. In Orissa the falls reported from the various stations vary from 15 inches to 26 inches, and the average is 18·58 inches. These amounts are all greatly in excess, the differences from the normal varying from 8·6 inches at Jagatsingpur to 17·84 inches at Kendrapara. East and North Bengal, on the other hand, have received less than

which has received more than the normal amount, but the excess is less than 1 inch, while in South-West Bengal defect is nearly 2 inches, and in Bihar more than 2 inches.

Buxa has received 26·4 inches less than the usual amount, Jalpaiguri, Kuch Bihar, Matabhanga, and Cox's Bazar about 20 inches less, and the following places more than 15 inches less:—Fenny, Netrakona, Kurigaon, Mickliganj, and Dinhatta. In the other districts defect generally varies from one to five inches.

The following table gives the actual falls in the various divisions, expressed as percentages of the corresponding normals for the first six months of the year. In the last column the total fall for the same period is so expressed, and it will be seen that there is a large defect in all districts except Orissa and Chota Nagpur:—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	Actual rainfall of first six months of 1895 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	44	9	29	111	86	82	78
North Bengal ...	27	5	49	129	91	43	63
East Bengal ...	11	1	38	140	133	47	75
Bihar ...	71	88	34	129	70	72	73
Orissa ...	49	101	29	194	46	212	149
Chota Nagpur ...	66	52	71	418	70	109	104

The following table gives data for the comparison of the actual and normal rainfall of June for all districts of the province. The figures are derived from the average and actual rainfall of rain-recording stations in each district, due allowance being made for the area which each represents:—

Percentage Table for June 1895.

Division.	District.	Normal district rainfall for June.	Actual district rainfall for June 1895.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (−).

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 13TH OF JULY 1895.

It has been pointed out in previous reports that an important feature of the weather during the latter half of June and the early part of July was the low pressure which obtained in the south-western districts and the north-west angle of the Bay, and that this appeared to be the chief cause of the unequal distribution of rainfall during these weeks. The monsoon current was deflected westwards across the mouth of the Bay towards the Orissa coast, and unusually heavy rain fell at all the Orissa stations, while in North and East Bengal the falls were unusually deficient.

During the present week there has been an almost complete reversal of the conditions referred to above. Pressure, instead of being lowest in Orissa and the adjacent parts, has been lowest in the north-east of the province, and the rainfall in Assam and North Bengal has been almost phenomenal as to the amount that fell in the early part of the week. Bihar and Chota Nagpur have received more than the normal fall, but in Lower Bengal and Orissa, especially the latter, rainfall has been light and scattered and in places absent.

On the 7th, the first day of the week under review, pressure was lowest over North Bengal and the east of Bihar, and though pressure was above the normal at all stations, a faint depression was visible more through the air circulation which it gave rise to. There was an easterly current down the Assam Valley and as far west as Jalpaiguri, while in Lower Bengal directions were southerly, and in Chota Nagpur and Bihar, south-west or west. Heavy rain was falling at all the stations affected by the easterly winds, especially Sibsagar, Dhubri, and Jalpaiguri. On the 8th there was a slow fall of pressure over the hills and the adjacent part of the plains, and a slow rise further south. In consequence the depression was more distinct, but was further north as south-westerly winds were blowing at Dhubri. The heavy rain continued at Jalpaiguri and Dhubri, and the unsettled weather was felt as far west as Motihari. On the 9th, pressure fell almost everywhere, somewhat more quickly at the extreme northern stations, but a slight recovery was shown in part of North Bengal and Bihar, at such stations as Rangpur, Dinajpur, and Purnea. There was a small defect at Jalpaiguri, and a larger one at Darjeeling, and as winds were now south-west at both these places, the slight depression must have passed across the Himalayas. Heavy rain was still falling in North Bengal and North Bihar, being probably due to local thunderstorms which invariably follow the passage of a depression from the plains to the hill tracts. On the 10th pressure rose briskly in North Bengal and North Bihar, and the distribution, though rather high, was not very different from the normal one of the day. The unsettled weather, however, continued, and Dhubri and Jalpaiguri reported 11 and 7 inches of rain, respectively, while 3 inches fell at Darjeeling and Motihari. During the last three days of the week winds were becoming more normal in direction, sotuh-easterly in North Bengal and easterly in Bihar. The rainfall became much less, though moderate showers were still falling in North Bengal.

During these days comparatively fine weather prevailed in Lower Bengal and Orissa. Showers were fairly general in the early part of the week, except in the 24-Parganas, Howrah, and Hooghly districts, where very little rain fell throughout. The scanty rainfall in these south-western districts was probably due to the ridge of high pressure which maintained its position over Orissa and part of South-West Bengal from day to day. It has been seen that the small changes of pressure in the north of the province gave rise to a very shallow depression which was accompanied by excessive rainfall. This rainfall ceased with the filling up of the depression, due to a rise of pressure of about ·06 inch. Similarly, the inequality of about ·05 inch in Orissa and South-West Bengal has led to a break in the rains of considerable duration.

Pressure.—Readings have been higher than the corresponding normal amounts at nearly all stations throughout the week, and changes have been small or moderate. Excess has been greatest in the south-west of the province, and as it has varied but little from day to-day, the means for these parts are much higher than is usual during a period when larger fluctuations are occurring. In South-West Bengal and Orissa mean excess varies from ·1 inch to ·12 inch, and in the other districts it is generally about ·08 inch, at Sibsagar it is ·05 inch, at Jalpaiguri ·07 inch, and at Darjeeling the mean pressure is very nearly normal.

Temperature has been above the normal except in the north of the province and in Assam, that is, in the area of unsettled weather and heavy rainfall. Mean excess is 1° or more in Chota Nagpur, Orissa, and East Bengal; in South-West Bengal the mean temperature is normal, and in the other districts there has been defect of about half a degree in Bihar, 1°·6 in North Bengal, and 3°·5 in Assam.

Rainfall.—Excessive rain fell in Assam and North Bengal during the first four days of the week, and rather heavy falls occurred in Bihar and part of Chota Nagpur. On the other hand, in Orissa and the adjacent part of South-West Bengal falls were very scanty, and all the southern districts have received less than the normal amount. The falls at rain-measuring stations in the Kuch Bihar district were generally over 30 inches, in Jalpaiguri over 20 inches, and the fall at Dhubri was nearly 27 inches. The average fall for the whole of North Bengal is nearly 12 inches, more than four times the normal, and in Bihar it is nearly 4 inches with an excess of 1·4 inches. There is a small excess in Chota Nagpur and defect in Lower Bengal and Orissa, varying from one inch in South-West Bengal to more than two inches in Orissa.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 13th of July 1895 :—

Meteorological Divisions	Temperature.						Rainfall.									
			Averages for week.				Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.

DISTRICT ROAD FUND.

No. 3984R.C.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Road Cess.

Dated Calcutta, the 19th July 1895.

RESOLUTION.

READ—

Letter from the Accountant-General, Bengal, No. 315L.F., dated 12th July 1895, submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 31st March 1895.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees in Bengal for the 4th quarter of the year 1894-95 be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded for information to the—

Commissioners of the Rajshahi, Chittagong, Bhagalpur and Chota Nagpur Divisions.
Superintending Engineers of the Northern and Western Circles.
Inspector of Works, Eastern Circle.
Financial Department of this Government.

By order of the Lieutenant-Governor of Bengal,

F. J. JOHNSTONE,

Secretary to the Govt. of Bengal.

A. F. COX,

Accountant-General, Bengal.

No. 4085A.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Accounts.

Dated Calcutta, the 23rd July 1895.

RESOLUTION.

READ—

The debate on the Bengal Provincial Service Budget for 1895-96, held in the Lieutenant-Governor's Council, on Saturday, the 30th March 1895, especially the remarks of the Hon'ble J. G. Womack on the subject of the purchase of stores in this country and the Lieutenant-Governor's reply.

Read also—

(1) The remarks of the Hon'ble Mr. Playfair, the Hon'ble Lieutenant-General Sir H. Brackenbury, and His Honour the Lieutenant-Governor on the same subject in the discussions of the Financial Statement of the Government of India for 1895-96, held in the Council of the Governor-General of India, which met on the 28th March 1895.

(2) Letter from the Government of Bengal, Public Works Department, No. 4384A., dated 31st August 1894, submitting to the Government of India, Public Works Department, the statement of expenditure on stores in the General and Irrigation Branches of the Public Works Department in Bengal for the year 1893-94.

(3) Letter from the Government of India, Finance and Commerce Department, No. 1426S R., dated 25th March 1895, pointing out that, as it is understood several of the principal engineering firms in India now possess the apparatus necessary for the proper testing both of the raw material and of the finished product, the fullest use should be made, subject to the prescribed precautions, of the liberty to procure supplies in India.

REMARKS.—In his speech at the meeting of the Bengal Council on the 30th March 1895, read above, the Lieutenant-Governor proposed to take steps to have a return prepared annually and laid before the Council on the next recurring occasion to show what the nature of the stores is which are purchased in England and those purchased in India.

2. In fulfilment of the above promise, the following information is compiled and published, showing the operations of the Public Works Department of this Province in 1893-94 in respect of purchases of stores in England and locally.

3. The total cost of stores entirely obtained from England was Rs. 2,62,492, the principal items of which are the following:—

A

Paddle steamer to be used on the Sone Canals, Rs. 49,584. The hull was sent out from England in parts and was put together and the plates rivetted and fixed at the Dehri Workshops, where the necessary wood-work, &c., were also supplied and fitted. The engines were imported in pieces, and, with the rest of the machinery, were fitted and fixed at these shops.

Bruce's dredgers, for use on the Sone Canals, Rs. 19,528. The machinery and boiler for these dredgers were obtained from England, the former in pieces which were put together and fixed at the Dehri Workshops. The hull and other parts were made and the complete finishing up done at these shops.

Vertical boiler, Rs. 3,891. One of Tangye's make, 7′-8″ high and 3′-2″ diameter with two cross tubes. It was sent out in one piece and erected through the agency of the Sibpur Workshops for the electric-lighting at the Eden Gardens.

Two steel boilers, Rs. 4,709. These were obtained in England from John Fowler & Co. for the Government steam launch *Aurora*. They came out whole and were fitted into the steamer at the Cuttack Workshops.

Rolled iron joists, Rs. 17,168. These were required for use in the new Stationery Warehouse, the Campbell Hospital, and other buildings.

T-iron, Rs. 20,353. These were obtained both for use in the roofs of above buildings as well as for general purposes at the several Government workshops.

Corrugated iron sheets, Rs. 45,601. This material is largely used for sheds, latrines, walling, &c., and is consequently indented for regularly to meet the many demands for it.

Plate steel,	Rs. 3,889	These materials were brought on to stock when sent out, and were used as required on various works executed at the Government Workshops at Sibpur, Dehri, and Cuttack.
Angle iron,	,, 14,071	
Round iron,	,, 2,694	
Plate ,,	,, 18,966	
Flat ,,	,, 4,359	
Mild steel sheet	,, 2,573	

Copper tape, ,, 3,850. This was brought on to the stock of the 1st Calcutta Division and distributed when lightning conductors were needed.

Cement,	Rs. 20,080	These materials were obtained for use in the various new works and repairs executed to Government buildings.
Paints	,, 9,605	

[illegible] named in group A. nor of the materials detailed under

as Government knows, even sent out roughly made up to be finished at workshops in this country.

4. The total cost of stores of European manufacture purchased in India on the score of urgency was Rs. 35,540. The principal items which make up this total are the following:—

Corrugated iron sheets, Rs. 2,094. These sheets were urgently required for bridges on the Tirihana-Bagdogra Road, the early completion of which was necessary to maintain through communication.

Rolled iron joists, Rs. 17,359. These joists were required for repairs to several Calcutta buildings, special repairs to the Eden Sanitarium at Darjeeling, quadrennial repairs to buildings in the Balasore Division, and for urgent miscellaneous works executed at the Sibpur Workshops. These requirements were such as could not be foreseen and the indenting for these articles from England would have caused delay.

Plate iron, Rs. 2,359
Angle „ „ 4,310
Flat „ „ 1,928

These materials had to be purchased locally for the Sibpur Workshops in connection with urgent orders, which could not have been foreseen and which could not without delay have been kept in abeyance to allow of the articles being indented for from England.

Taking the India Office prices, and adding freight and packing charges, the cost of these articles, if purchased in England, would have been only Rs. 31,986, so that Government paid 11 per cent. more through buying them in India than it would have paid in England.

5. The total cost of stores manufactured in India, partly from imported material and partly from indigenous material, and substituted for stores formerly imported, was Rs. 85,315, the principal items being as follows:—

Iron mud barges, Rs. 35,464. These were for use on the Sone Canals and were made up chiefly from iron plates imported from England. The fitting, putting together and finishing off were done at the Dehri Workshops.

Cast-iron railings, Rs. 2,698
Cast-iron columns „ 2,485

These were made up at the Sibpur Workshops for use in various Government buildings.

Galvanized iron tanks, Rs 1,440. These were required for storage purposes in connection with the supply of water, and were made up locally from imported galvanized iron sheets.

Galvanized iron pipes, Rs. 4,482. The pipes were procured from England in market lengths, but cut fitted and fixed at the several works where a water supply was being laid on.

Wrought-iron ladders of sizes, Rs. 1,135
Ditto gratings of sizes „ 3,506

These were required in connection with buildings, the former for giving access to roofs, and the latter for jails, treasuries, &c., and were made up at the Sibpur Government Work-shops.

Wrought-iron screw shutters, Rs 1,627
Ditto framed shutters „ 1,162
Bolts, nuts and washers „ 2,636
Ditto for dredgers „ 5,250
Cast-iron pinion for dredgers „ 3,000
Iron work for lock gates „ 9,843

These were needed for irrigation works in the province, and were made up at the Government Workshops at Dehri, Cuttack and Sibpur from imported material worked into its finished shape in this country.

Brass butt hinges, Rs. 2,326. Required for doors and windows in various buildings and made at the Sibpur Workshops.

Barákar pig iron, Rs. 3,205. Used for cast iron work done in the Government Workshops.

Rope, manilla, Rs. 1,752. Purchased for use by the Irrigation Department.

6. Corresponding information as to the transactions of 1894-95 will be published as soon as the figures are received.

7. The Lieutenant-Governor is anxious to carry out to the fullest extent possible the policy prescribed by the Government of India in their Resolution No. 1426S.R. of 25th March 1895, quoted above, and has addressed the principal firms in Calcutta to ascertain whether they are able to supply any of the articles mentioned in paragraph 3 of this Resolution, subject to the conditions (*a*) that they are not imported into India in a finished state, (*b*) that machinery exists for the application of sufficient tests as to quality and workmanship, and (*c*) that the price does not exceed the cost at which such articles can be procured through the Secretary of State for India.

ORDER.—Ordered, that a copy of this Resolution be published in the Supplement to the next issue of the *Calcutta Gazette*.

Ordered also that a copy of this Resolution be forwarded to the Bengal Chamber of Commerce, the Calcutta Trades' Association, and the Bengal National Chamber of Commerce.

By order of the Lieutenant-Governor of Bengal,

WORKING OF THE ANTHROPOMETRIC SYSTEM FOR THE IDENTIFICATION OF OLD OFFENDERS IN THE LOWER PROVINCES.

No. 10552A., dated Calcutta, the 26th June 1895.

From—E. R. HENRY, Esq., I.C.S., Inspector-General of Police, L. P.,
To—The Chief Secretary to the Government of Bengal.

IN continuation of previous reports, I submit information of the progress made in the districts of the Lower Provinces in working the anthropometric system for the identification of old offenders.

1. Letter No 1732, dated the 25th February 1893, from the Inspector-General of Police, Lower Provinces, to the Chief Secretary to the Government of Bengal.
2. Letter No. 6353, dated the 1st May 1894, from the Inspector-General of Police, Lower Provinces, to the Chief Secretary to the Government of Bengal.

In the reports specified in the margin of this paragraph, full explanation is given of the rules under which the system of measuring, selection of persons to be measured, classification of results, and system of search is carried out.

Arrangements made in all districts for the early registration of unidentified accused, for their being measured, and a reference made to Central office before disposal of their cases.

II.—I may now point out that in all districts attention is concentrated on unidentified accused criminals. As soon as a person is arrested on a charge of having committed an offence against property, if the local police are unable to ascertain or verify his antecedents, he is dealt with under the rules laid down for "unidentified" suspects. At each sub-division, the unit in these provinces of criminal administration, there is a Court Sub-Inspector whose special duty it is to look after and prosecute police cases. This officer is required, as soon as an unidentified person is sent up in police custody, to enter his name and other particulars in a register, to forward by the first post this nominal roll to the Inspector-General's office, and to arrange for measuring him without delay. The object of this rule is to enable the Central office to maintain check, so that no unidentified accused shall, through omission, escape measurement.

The Court Sub-Inspector having taken the measurements and left thumb impression on a card in prescribed form, forwards it to the Central office and awaits a reply before the case against the accused is disposed of in Court. On receipt of the card, the Central office institute search, and if the identity of the suspect is made out, send a reply by return post informing the requisitioning Court officer of the suspect's real name and residence, and giving details of all previous convictions on record against him. On receipt, this reply is placed before the trying Magistrate, who, ordinarily, grants a remand to enable the prosecuting police to summon witnesses and prove the previous convictions in the manner required by law (section 511, C. P. C.).

Means devised to enable (*a*) station officers, (*b*) Court Police to verify antecedents of accused persons.

III.—Much attention has been devoted to improving the means of enquiry within reach of the District Police. Under existing rules, when a person is convicted of certain specified offences, his name and details of the case are recorded in a book known as the Conviction Register, the entries in which are scrutinised once a week by a Magistrate and authenticated by his signature. At the same time, a copy of the entries is forwarded to the police station which sent the accused for trial, where they are transcribed into Register XIII, which contains information concerning the past criminality of all persons resident within the police station jurisdiction, and corresponds for the station area with the Conviction Register for the district area.

Complete indexes to Conviction Register for a period of from 10 to 20 years, prepared on an improved principle supplied to the 128 Sub-divisional Court offices of the province.

For the use of the Court Police, indexes on an improved principle to this Register, for a period of from 10 to 20 years, for all districts have been prepared, and copies given to all Court offices. The indexing has been devised on a system, the salient points of which are that the confusion arising from the varying spelling of names is discounted, and the person and his father's name are simultaneously traced by the one process of search. In practice it answers admirably.

Each station officer has thus the means of ascertaining whether a resident of his jurisdiction has, or has not, been previously convicted, and must certify

accordingly when sending an accused for trial, or state that he cannot be identified. Court Sub-Inspectors check the certificates of the investigating police, certifying that they have searched their Conviction Register indexes. The preparation of these indexes has given much labour, but that it has not been given in vain is indicated by the results of previous convictions proved during 1894, the percentage being higher than ever previously obtained.

Circumstances under which aid of anthropometry utilised.

IV.—The system now in force appears to provide the fullest check possible under existing conditions, and when the accused is a resident of the district, or if resident of another district, gives his correct name and residence, the Court Police require no assistance in verifying antecedents. It is only when the suspect is a foreigner or gives an incorrect name that the local police are powerless and have to apply to the Central office for information.

One of the successful cases of the year is a good instance of the effectiveness of the anthropometric system. A man was caught in Backergunge breaking open a box in a house which he had burglariously entered. Interrogatory was of no avail as he feigned dumbness. His measurements were taken before he was sent to the Civil Surgeon to be kept under observation. The Civil Surgeon certified the man to be dumb; the Central office, however, identified him as Saroda Charan Bose, an old offender, twice previously convicted, a resident of Khaitpara village in Khulna. Acting on this information the local police were able to produce evidence which satisfied the Judge at the trial that the accused was in reality Saroda Charan Bose of Khaitpara; that he was shamming dumbness, and that he was an old offender; he was sentenced to four years' imprisonment. But for the anthropometric system this criminal would doubtless have been treated with special leniency as an unfortunate suffering from the pitiable disability of loss of speech.

Successful cases of identification during 1894 and percentage of successful cases to total number of unidentified in all Bengal districts.

V.—During the year 1894, of the persons sent for trial charged with having committed offence against the person and property or property, the local police succeeded in identifying all but 536. Of these 536, the identity of 112, or nearly 21 per cent., was established by means of anthropometry upon information supplied by the Central office, the previous convictions on record against these persons being duly established in Court. These figures represent results in their least favourable light, for of the 424 unidentified, only 375 were convicted; and as it is only in the case of these latter that establishing identity and proving previous criminality could have been of avail, the proportion of successful cases might be calculated accordingly. In addition, I find that 51 of the persons who remained unidentified at the close of the year were Nepalese, who came over the border and committed crime in Jalpaiguri and Champaran. The anthropometric system not being employed in Nepal, their identification by means of it was not to be hoped for. There were also 19 juveniles or women who, under our rules, are not measured. If, therefore, impossible cases are eliminated, it will be seen that the results obtained were as good as could have been expected in the second year of bringing the system into practical working and may be thus stated:—Of the total number of unidentified persons convicted in Bengal districts, 23 per cent. were recognised by means of anthropometry and their previous criminality proved in Court. Successful cases came from 3 districts and the Railway Police. There were, besides, 28 identifications for the Calcutta Police, making a total for the Province of 140 successful cases.

In estimating the value of these results, it must be borne in mind that the Bengal system applies to dangerous criminals only, and that in addition to identifying, the Central office furnishes in all instances full information of previous criminality. "In Paris every person arrested for any offence is at once subjected to the process of measuring, and is sometimes photographed before being taken before a Magistrate. It would not be consistent with English ideas to entrust to the police an arbitrary power of measuring or photographing every person arrested, without regard to the necessity for the purposes of justice of discovering his antecedents and character." (Blue Book C 7263. The Report of the Committee appointed by the Secretary of State for the Home Department to enquire into the best means available for identifying

habitual criminals.) In Bengal the duty of measuring is entrusted to police officers at over 100 different centres, and not "as in Paris to a few incessantly-practised experts, working for many hours every day in the same room under skilled supervision." (Fingerprint Directories by F. Galton, F.R.S., London, 1875, page 56.) No comparison between the figured results obtained in France and Bengal can therefore be usefully instituted. I may add that the Committee whose report is quoted, are of opinion that in England it will be necessary to permanently record the measurements of about 4,500 convicts yearly, their selection being made upon considerations similar to those which have determined selection in Bengal. Their Report, presented to the House of Commons in 1894, recommends the adoption in England of a modified anthropometric system, the details of which correspond in all essential particulars with those of the system introduced in Bengal in the beginning of 1892. The one difference is that while advocating the employment of the measurements of length and breadth of head, left middle finger, forearm and foot for purposes of classification, they are of opinion that finger impressions should be substituted for height measurement as the sixth factor in classifying. So far the system of classifying adopted in this province, judged by the results of actual working, has answered well, and it is not under contemplation to make any change in it. As the number of cards increases, further sub-classification may be needed, and the thumb impression will then be made use of for the purpose.

Criminal record for Province up to the end of 1894.

VI.—In round numbers, 18,000 cards had been received for record up to the close of the year; 1,500 cards of deceased criminals were destroyed; in addition, 2,500 cards of prisoners undergoing long sentences have been kept apart, to be brought into the search almirahs three months before the earliest date of expiry of sentence, the actual number of cards arranged in the search almirahs being thus reduced to 14,000. Bengal is thus building up a record of the criminality of all recidivists, which, in time, will be more complete and contain information in a more accessible form, than the record possessed by the police in England or in any English colony or dependency.

Number of police officers competent to measure and take finger impressions.

VII. Each year between 120 and 150 English-knowing officers, recruited on the results of competitive examination for the post of Sub-Inspector, before being drafted to districts, are sent for three months to the Police Training School where, in addition to instruction in other subjects, they are taught anthropometry in all its branches, and on leaving are competent not only to measure, but to fill in search slips and search for cards. There are now a large number of officers scattered over the districts of the province, who are competent measurers; they are periodically subjected to examination by the Deputy Inspectors-General and myself, and by the skilled measurers, who visit each district in turn, once in six months. Acquaintance with the working details of anthropometry and taking finger impressions has thus been widely diffused amongst the police. As already reported, officers have been trained for other provinces. Mr. Paget, District Superintendent, who received special instruction at the Central office, is now on deputation in the North-Western Provinces to assist in the introduction of anthropometry there. Inspector Ram Sadai Mukerjea, sent to instruct the Bombay Police, fulfilled his task so satisfactorily as to earn the special commendation of the Inspector-General, Commissioner of Police and of the other officers instructed. Copies of the pamphlet on "Criminal identification by means of Anthropometry in Bengal" have, at their request, been supplied to several Governments and Administrations, and also recently under orders from the India Office to the Home Office in England.

WEATHER AND CROP REPORT.

For the week ending the 22nd July, 1895.

Burdwan.—Rainfall at Burdwan ·56. Weather cloudy and hot. Transplantation of *aman* rice hindered through absence of rain, which is urgently wanted. Condition of cattle good. Fodder and water sufficient. Common rice sells from 10 to 20 seers a rupee.

Midnapore.—Rainfall at Sadar ·57. Weather hot. More rain wanted. Rice sells from 16 to 22 seers a rupee.

24-Parganas.—Rainfall at Sadar 1·33. Weather showery with prospect of more rain. Prospects of *aus*, jute and sugarcane are fair in spite of scanty rain. Transplantation of *aman* going on in low lands. Fodder and water sufficient. Rice sells at—

	Srs.	c.	
Sadar	11 to 13	0	per rupee.
Barasat	15	0	
Basirhat	18	13	
Diamond Harbour	15	0	

Murshidabad.—Rainfall not reported. State of sugarcane, *bhadoi* rice and jute are favourable. Indigo manufacture is proceeding. Fodder and water sufficient. Common rice sells at 16 seers per rupee.

Khulna.—Rainfall 1·30 at Khulna, ·98 at Bagerhat, 1·12 at Satkhira. Weather hot. Transplantation of *aman* still continues. More rain wanted. Price of common rice 16 to 22 seers per rupee. Fodder and water sufficient.

Dinajpur.—Average rainfall 4·81. Weather hot and rainy. Standing crops doing well. Common rice sells at 14 seers a rupee. Cattle-disease in Thakurgaon decreasing.

Rangpur.—Average rainfall 6·36. Weather cloudy and rainy. Harvesting of *aus* paddy nearly completed. Transplanting of *aman* paddy and cutting of jute progressing. Fodder sufficient. Rice selling from 11 to 15 seers a rupee.

Pabna.—Rainfall 2·06. Weather hot and rainy. The flood water has damaged the crops on low lands. Prospects of crops on high lands good. Price of common rice stationary. Fodder sufficient.

Dacca.—Rainfall 1·08. Weather cloudy. The sudden rise of the river in the Manikganj subdivision has done some damage to *aus* and *aman* paddy. The extent of damage is being enquired into. Common rice sells at 19 seers per rupee. No cattle-disease. Fodder plentiful.

Chittagong.—Rainfall 6·94. Weather cooler. Cultivation of *aman* progressing. Water and fodder sufficient. Common rice selling at 18 seers per rupee.

Patna.—Rainfall 4·29 at Sadar, deficient at Barh and Bihar. It is quite sufficient for *bhadoi*, but more rain is much needed for transplantation of paddy. Condition of cattle good, and supply of fodder and water sufficient. Common rice selling from 17 to 18 seers per rupee.

Gaya.—Rainfall at Sadar 1·31. Paddy transplantation hindered by insufficient rain, but good rain today (22nd July). *Bhadoi* prospects favourable. Price of rice at Sadar 15 seers per rupee.

Champaran.—Rainfall at Motihari 1·22. Transplantation of *bhadoi* crops going on. Fodder for cattle sufficient.

Darbhanga.—Rainfall 1·63 at Sadar, 1·39 at Samastipur, 3·29 at Madhubani. Transplanting of paddy and *marua* going on. Common rice sells from 15½ to 17½ seers per rupee. Fodder and water sufficient.

Bhagalpur.—Weather hot and rainy. Rainfall 1·96. This was insufficient for transplantation of paddy except on very low lands, but it is raining heavily today (22nd July). Prospects on the whole good. Common rice sells at 17 seers 10 chitaks per rupee. Fodder and water sufficient.

Purnea.—Rainfall 5·49. Prospects of *bhadoi* crops and jute continue good. Transplantation of *aghani* going on favourably. No cattle-disease. Fodder and water sufficient. Common rice selling from 15 to 20 seers per rupee at Sadar.

Cuttack.—Rainfall ·88. Weather seasonable. *Beali* being weeded. Transplantation in flooded tracts going on. More rain wanted. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 25 seers per rupee.

Hazaribagh.—Rainfall at Sadar 2·96. Sufficient rain has fallen all over the district. Transplanting operations in progress. All crops doing well. Fodder and water sufficient. Common rice selling at 13 to 16 seers per rupee at Sadar and 10 to 14½ seers per rupee at

General Summary.—There was good general rain all over the province, except in the Burdwan and Presidency Divisions, where the falls were scanty. In almost all districts of these two Divisions the cultivation of the winter rice crop is much retarded, and in parts of Bihar and Orissa too more rain is required for transplanting operations. Prospects of all *bhadoi* crops, including *aus* rice and jute, and of sugarcane are generally favourable. In Pabna and Dacca the crops on low lands are reported to have been somewhat damaged by floods. Cattle-disease in Dinajpur is decreasing; in other districts the cattle are in good condition. The price of common rice continues almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 23rd July, 1895.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the Interi during the month of April, 1895.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 20TH OF JULY 1895.

THE chief features of the weather during the week just past have been the continued, though not so heavy, rainfall in North Bengal and the adjacent part of Assam, and the cyclonic storm of small intensity which commenced about the middle of the week, and led to a renewal of monsoon conditions over the whole province. The pressure distribution has remained above the normal throughout, and even when the depression was developing in the north-west angle of the Bay and approaching the coast, the fall never gave rise to defect of much more than a twentieth of an inch.

At the beginning of the week there was a ridge of relatively high pressure over Orissa, South-West Bengal, and the north-west angle of the Bay, and as from this area excess diminished towards the north and also over the Bay, gradients were moderately steep over the province, and less steep than usual towards the south. Consequently, the monsoon current was weak in the south-west of the province, but in the northern districts within the area of slightly low pressure, there was a tendency to local disturbances and occasional heavy showers. During the first three days of the week the wind circulation was more westerly than usual, not only in Lower Bengal, but also in North Bengal and Bihar, where the prevailing direction at this time of the year is from the east or south-east. Pressure began to give way slowly on the 15th, the second day of the week, but the south-westerly winds continued except in the extreme north, where directions had become irregular, and local disturbances became general, especially in the adjacent parts of North Bengal and Assam, and in the west of Bihar, Dhubri, Jalpaiguri, Muzaffarpur, and Patna. All reported heavy rain, while over the greater part of the province, and especially in the south-western districts, falls were light or scattered. At this time temperature was 2° in excess in the south of the province, and from 1° to 5° below the normal in the northern districts.

The fall of pressure continued for some days in the south of the province, but as it gradually became more local and was chiefly confined to the north-west angle of the Bay and the adjacent land, while there was a slow rise elsewhere, the shallow depression referred to above slowly formed. There was no sign of its formation on the 16th, but on the 17th winds were becoming cyclonic on the Orissa coast. Gradients were steeper in the south of the Bay, and squally weather was developing on the coast of the Circars and probably over the part of the Bay extending eastwards. Winds were easterly in North Bengal and Bihar, and the heavy local rainfall had ceased. On the 18th the depression was more distinct near the South Orissa and Ganjam coasts, and the cyclonic circulation of winds extended over the whole province and the Bay. The fall of pressure was confined to Orissa, Lower Bengal and the north of the Bay, but changes were more than ·05 inch at the Orissa stations only. The development of the depression was fairly rapid, though pressure changes were small, owing to the rise which was proceeding outside the limited area where the disturbance was, and the depth was chiefly due to the excess, which was considerable in North Bengal and in the south of Burmah.

On the night of the 18th the centre of the depression crossed the coast south of False Point, moving in an almost northerly direction, and at 8 A.M. on the 19th it was not far from Balasore. Pressure had fallen moderately at Balasore and Midnapore, and slowly at the other south-western stations, while elsewhere the slow rise prevailed. The cyclonic winds continued, and gradients were moderately steep both over the province and the Bay, but so far only light rain fell, and temperature remained above the normal over a great part of the province. On the 20th the low pressure area was more shallow, and appeared to be over Chota Nagpur, continuing to move in an almost northerly direction. Rainfall on this day was much more general in all districts, but the fall exceeded 1 inch at a few stations only.

Pressure—Has remained above the normal throughout the week, except in Orissa, where there was a small defect during the passage of the depression. Means are therefore above the normal in all districts by amounts varying from ·04 inch in Orissa to ·08 inch in North Bengal.

Temperature—Has generally been below the normal in North Bengal and Assam and above in the other districts by about 1° or less, except in Orissa and Chota Nagpur, where excess was somewhat larger. The mean excess in Orissa is 1°·9, in Chota Nagpur 1°·5, in South-West Bengal 1°, in East Bengal 0°·5, and in Bihar 0°·3. In North Bengal mean defect is 1°·5, and in Assam 2°·9.

Rainfall.—The heavy showers which fell in the west of Assam and North Bengal during the early part of the week, and to a small extent in Bihar, have led to considerable excess in those parts. Though the depression gave rise to general rain in the southern districts at the end of the week amounts were light, and there is again a rather large deficiency in Orissa and Lower Bengal. The fall at Dhubri was more than 15 inches; the mean fall in North Bengal nearly 5 inches, as compared with a normal amount of 2·83 inches, and in Bihar 2·6 inches, which was ·37 inch in excess. In Orissa there was defect of ·87 inch, in South-West Bengal 1·17 inches, in East Bengal 1·08 inch, and in Chota Nagpur ·81 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 20th of July 1895 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The average fall of the corresponding period for 24 years, Surveyor-General's Office		22·92

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; p, passing temporary showers; lr, lighting reflection; d, drizzling rain; t thunder; ⌓, dew.

RESOLUTION ON THE ADMINISTRATION REPORTS OF THE ALIPORE AND HAZARIBAGH REFORMATORY SCHOOLS FOR THE YEAR 1894.

No. 2189P.

RESOLUTION.

JAILS.

Calcutta, the 26th July 1895.

READ—

(1) Letter No. 6110, dated the 12th June 1895, from the Inspector-General of Jails, forwarding the Administration Report of the Alipore Reformatory School for the year 1894.

(2) Letter No. 6049, dated the 13th June 1895, from the Inspector-General of Jails, forwarding the Administration Report of the Hazaribagh Reformatory School for the year 1894.

Read also—

The Reports for the years 1893 and 1892, and the orders of Government recorded thereon.

These Reports, which are for the calendar year, have been delayed in submission, and should, in future, be submitted to Government not later than the 15th of March of each year. The Lieutenant-Governor notices an absence of uniformity in the preparation of these reports, and has issued separate instructions providing for uniform statistics and tables, without which no instructive comparison between the working of the two institutions can be made. The remarks of the Inspector-General are in accordance with the practice of past years confined to the Hazaribagh Institution, but it is requested that in future he will submit a report summarising the results of the year's working in both reformatories.

2. The total number of boys in the two schools on the 31st December 1893 was 528, and the number admitted during the year was 143. Of these,

105 were released and 4 died, and there remained at the close of the year 562 boys—224 at Alipore and 338 at Hazaribagh. The daily average number of boys rose from 468 in 1892 and 514 in 1893 to 537 in 1894. Of the 4 deaths, 3 occurred at Alipore and 1 at Hazaribagh, the figures for the preceding year being 4 and 1 respectively. The general health of the boys was good. It is reported that one boy escaped from the Hazaribagh school during the year, but he was soon recaptured, and the warders responsible were punished. No escape occurred in the Alipore school.

3. The number of offences committed in the Alipore school fell from 76 in 1892 and 73 in 1893 to 55 in 1894, while in the Hazaribagh school the number increased from 266 in 1892 and 272 in 1893 to 336 in the past year. It is not easy to account for the great difference in the two sets of figures, and there appears to be a difference in discipline or in the system of recording punishments in the two institutions. For instance, 123 cases of theft occurred at Hazaribagh and none are reported at Alipore, but no explanation is given of this discrepancy. The average number of boys entitled to marks in the two schools was 448 against 445 in 1893, and the weekly average earnings amounted to Rs. 17-10-2 against Rs. 16-10-1 in 1893.

4. Gymnastics were introduced into the Alipore school in 1891 and into the Hazaribagh school in 1893, and many of the boys are said to show proficiency. There is a day and night school in both institutions, but the attendance at the night school between 6 and 8 P.M. is optional. There seems no sufficient reason for this, and the Lieutenant-Governor directs that in future both night and day school shall be compulsory. The educational staff remained the same as in previous years, but there has been a large increase, from Rs. 1,242 to Rs. 1,765, in the amount paid as salary of trade instructors at Alipore, which should have been explained.

5. The usual reports were received from Magistrates regarding the conduct of the boys released. It is said that 133 boys were reported to be well behaved, 2 were viewed with suspicion, 2 bore bad characters, 11 were in jail, 3 had died, and only 4 were following the trades taught in the school. It appears that these reports refer not only to the boys released during 1893, but include the releases of previous years. The attempt to report on all boys released in the past obviously breaks down, and the Lieutenant-Governor desires that in future the returns of conduct of boys after discharge shall only be furnished for the preceding year, that is, the particulars regarding boys discharged in 1895 should be furnished in 1896, and so on. After the first year has elapsed, the police need no longer be employed in keeping a record of their whereabouts and their behaviour.

6. The total profits from manufactures in the two schools rose from Rs. 14,713-7-5 in 1893 to Rs. 16,640-12-3 in 1894. The figures of the Alipore school show an increase of Rs. 1,587-2-7, due chiefly to book-binding, and of the Hazaribagh school of Rs. 340-2-3.

7. The following table compares the expenditure under the several heads in the two schools during the past two years:—

Heads of Expenditure.	Alipore School.				Hazaribagh School.			
	Total cost.		Cost per head.		Total cost.		Cost per head.	
	1893.	1894.	1893.	1894.	1893.	1894.	1893.	1894.
1	2	3	4	5	6	7	8	9
	Rs.	Rs.	Rs. A. P.	Rs. A. P.	Rs.	Rs.	Rs. A. P.	Rs. A. P.
1. Fixed establishment ...	9,764	9,770	46 4 5	43 9 10	9,132	8,875	30 3 2	28 5 5
2. Diet	8,157	8,044	38 10 7	35 14 9	7,920	8,059	26 3 4	25 11 9
3. Hospital	223	220	1 0 10	0 15 9	80	136	0 4 3	0 6 11
4. Clothing	681	891	3 3 7	1 11 11	1,478	1,633	4 14 2	5 3 5
5. Contingencies	2,263	2,243	10 11 7	10 0 3	3,626	2,086	11 8 6	6 10 7
6. Construction and repairs.	27	23	0 2 1	0 1 2	1,880	4,693	6 5 1	14 15 3
Total ...	21,114	20,691	100 1 1	92 5 8	24,022	25,481	78 1 5	66 6 0

The Lieutenant-Governor notices that some reduction in the cost of diet per head is said to have been effected by the timely purchase and storage of rice and wheat. The increase under the head of building and repairs at Hazaribagh is due to the provision of additional accommodation for the boys, and further expenditure will have to be incurred during the current year under this head on account of the juvenile offenders from Assam, whom it has been decided to admit in future into the institution.

ORDER—Ordered that a copy of the Reports, and a copy of the Resolution, be forwarded to the President of the Board of Management of the Reformatory School at Alipore for information, and for communication to the members of the Board.

Ordered also that a copy of the Reports, and a copy of the Resolution, be forwarded to the Inspector-General of Jails for information, and for communication to the Superintendent of the Hazaribagh Reformatory School.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Chief Secretary to the Govt. of Bengal.

RESOLUTION ON THE ANNUAL RETURNS OF THE WORKING OF CHARITABLE DISPENSARIES IN BENGAL FOR THE YEAR 1894.

MUNICIPAL DEPARTMENT—MEDICAL—No. 3057Medl.

Calcutta, the 30th July 1895.

RESOLUTION.

READ—

The Annual Returns of the working of Charitable Dispensaries in Bengal for the year 1894.

Read again—

The Annual Returns of the working of Charitable Dispensaries in Bengal for the year 1893, and the Resolution recorded upon them.

This report was due to Government on the 1st May, but was not received until the 25th June, or nearly two months after the proper date. The delay is not justified by the treatment of the subject contained in the brief notes on the various returns, which are meagre and omit to notice many points of importance. These defects are no doubt due to the fact that the present Inspector-General of Civil Hospitals only took charge of the Department towards the close of the year and had not had time to acquaint himself with the details of dispensary management in Bengal.

2. *Number of dispensaries.*—For administrative purposes the hospitals and dispensaries with which this report is concerned are divided into four classes, viz., (I) State institutions maintained from Provincial funds and under Government management; (II) Local Fund institutions administered and maintained wholly or in part by local authorities, such as District or Local Boards and Municipalities; (IIIA) Institutions maintained wholly from private sources; and (IIIB) Institutions maintained partly from private sources and partly from Government or Local Funds. During the year under review, 47 dispensaries were added to the list, 22 of which were new institutions, while 25 were existing dispensaries now for the first time brought under Government supervision. Two dispensaries were burnt down and one was closed, so that in the course of the year the total number rose from 339 to 383, showing a net increase of 44. Of the 25 old dispensaries referred to above, 9 were railway dispensaries and 13 were institutions maintained by wards' estates or the Lady Dufferin Fund, and falling under class IIIA. By the inclusion of these institutions, which was ordered in the Resolution on the Dispensary Returns for 1893, the statistics of medical relief in Bengal have been rendered fairly complete.

The statistics relating to the Dufferin Hospitals at Dinajpur, Bankura, Hooghly and Chittagong were included in the returns of the sadar dispensaries at those places for 1894. This practice makes it impossible to see what progress is being made by these special institutions, and in future the statistics relating to them should be separately shown.

The following statement compares the distribution of dispensaries with regard to population during the last three years. It appears that the Rajshahi, Chittagong and Orissa Divisions are the best provided with medical relief; whilst the Patna, Bhagalpur and the Chota Nagpur Divisions are most backward in this respect, but, as was observed in the Resolution on the last Triennial Report, some time must elapse before these deficiencies can be supplied :—

3. *Number of patients treated.*—The following table shows the total number in-door and out-door patients treated during the last three years, and their tio to the population of the area concerned, which excludes Calcutta, but cludes the Chittagong Hill Tracts:—

Years.	Patients.			Population.	Ratio per cent. of total treated to population.
	In-door.	Out-door.	Total treated.		
1	2	3	4	5	6
1892	37,845	1,575,926	1,613,771	70,665,427	2·28
1893	40,589	1,885,939	1,926,528		2·72
1894	43,824	2,241,626	2,285,450.		3·23

The total number of patients treated during the year was 2,285,450 or 3·23 per cent. of the population, against 1,926,528 or 2·72 in 1893, being an increase of 358,922. The daily average attendance of patients rose from 15,426 in 1893 to 17,689 in the past year. Comparing only those institutions which were in existence throughout both years, 15 dispensaries showed an increase of more than 3,000 patients, which is ascribed usually to general causes, such as the unhealthiness of the season or the popularity of the dispensary. An increase of 8,195 patients at Bihar in Patna is, however, attributed to the removal of the dispensary from a remote site to the centre of the town; and in the case of Hajiganj in Tippera the presence of a large number of coolies working on the Assam-Chittagong Railway is cited to account for an increase of 3,218 patients. Five dispensaries show a decline of more than two thousand patients, which is accounted for in each case by a general statement that the health of the locality has improved. In commenting on these figures the Inspector-General observes that the popularity of a dispensary depends far more on the medical officer in charge and on the amount of attention given to it by the Civil Surgeon than on the healthiness of the district. The Lieutenant-Governor's experience fully bears out Dr. Ross's remark. Disease and suffering prevail everywhere, too often, unhappily, on a larger scale than the medical resources available can adequately

deal with. But the main difficulty is to induce the people to submit themselves to treatment, and this depends chiefly on the tact and skill of the medical officers concerned and on the confidence which the people repose in them: such confidence is a plant of slow growth and is uprooted by frequent transfers. It is a duty which Government owes to the people to oppose as far as possible such transfers as are desired only for personal reasons.

4. *In-door patients.*—In-door as well as out-door patients were received in 179 dispensaries as compared with 163 in 1893, and the number thus treated rose from 40,589 to 43,824, being an increase of 3,235. The number of beds available increased from 2,511 to 2,852, and the daily average of attendance from 1,693 to 1,773, which is still, however, far below the number of beds provided. Notwithstanding the increase of in-door patients the deaths numbered only 5,051 against 5,059 in the previous year, and the death-rate declined from 12·46 to 11·52 per cent. The pilgrim centres of Puri and Deoghur record high death-rates (44·62 among 632 persons treated and 37·17 among 191), but the Gaya Dispensary, where 1,398 persons were treated, had a death-rate of only 9·72.

5. *Out-door patients.*—The Lieutenant-Governor notices with satisfaction the steady increase in the number of out-door patients. The figures for the year under report were 2,241,626 against 1,885,939 in the year before, and show an increase of 18·85. They still, however, fall short of the number treated in 1893 in the North-Western Provinces (3,677,835) and the Punjab (3,116,823). It is alleged that the existence of the large number of private dispensaries in the towns of Bengal, where medical advice is given free of charge, tends to affect the attendance in charitable dispensaries, and no doubt there is some reason for believing this to be the case. The daily average attendance was 15,915 as compared with 13,732 in 1893.

6. *Diseases treated.*—The number of cases of malarial fever treated rose from 408,043 to 473,362, the percentage to the total number of cases treated being 20·7 against 21·1 in the previous year. The year was a very unhealthy one, as was shown at length in the Resolution reviewing the Report of the Sanitary Commissioner, and it was conspicuous for the prevalence of malarial fever. In the same Resolution reference was made to the fact that the highest death-rates from cholera were recorded in Bihar, and this also is borne out by the dispensary returns. The number of cholera cases treated increased from 8,077 to 12,181 or by 150·8 per cent, and in the Patna Division the cases brought into the dispensaries rose from 586 to 5,064, or 864·1 per cent. Bowel complaints (dysentery and diarrhœa) account for 120,882 admissions, as against 87,243 in 1893. The number of cases of small-pox treated rose from 91 to 107, but although no less than 2,334 deaths from this cause were registered in Orissa, only 7 cases were admitted into the dispensaries of that Division. The number of lepers treated was the same as in 1893, the highest figures being reported from Laheria Serai (292), Kalimpong Mission Dispensary (146), and Darbhanga and Patna (72 each).

7. *Surgical operations.*—The total number of surgical operations, including both major and minor, rose from 92,476 to 105,604. Major operations increased from 9,991 to 11,238; and 3,232 were done by the Superintendents themselves, as against 2,770 in the previous year. The hospitals named in the margin have the largest record of major operations. Taking both kinds of operations together, the Bankipur hospital shows 3,697, Dacca comes second with 3,584, and Monghyr third with 2,642. The following officers performed more than 200 major operations during the year:—

Dacca	772
Gaya	599
Bankipore	570
Chapra	558
Monghyr	483
Chittagong	339
Arrah	307
Cuttack	253
Rampore Boalia	209

Surgeon-Lieutenant-Colonel R. Macrae (Gaya)	...	348
Military Assistant Surgeon I. Burnett (Dacca)	...	343
Surgeon-Major T. R. Macdonald (Saran) ...	...	300
Assistant Surgeon Ram Kali Gupta (Bankipore)	...	284
Ditto Lolit Mohun Laha (Monghyr)	...	266
Surgeon-Lieutenant-Colonel R. D. Murray (Chittagong)	...	247
Assistant Surgeon Nritto Gopal Mitter (Arrah)	...	205

Operations for cataract (extraction of the lens) increased from 2,221 to 2,323, and in 80·25 per cent. of these cases the result was successful. The officers named in the margin performed over a hundred of these, and eight other officers performed over fifty apiece. The number of cases of lithotomy fell again from 143 to 132; and litholopaxies also declined from 72 to 69. Out of seven cases of ovariotomy, four recovered and three died; but this proportion, as has been pointed out before, is no true index either of the danger of the operation in itself or of the skill of the operator; for only the worst cases are brought in for operation.

Surgeon-Lieutenant-Colonel R. Macrae, Gaya	297
Surgeon-Major T. R. Macdonald, Chapra	162
Assistant Surgeon Ramkali Gupta, Bankipore	116
Assistant Surgeon Nritto Gopal Mitra, Arrah ...	113

9. *Sex of patients.*—The number of males treated shows an increase of 210,414, while the number of women rose from 299,187 to 362,632 or by 21·20 per cent. The number of children admitted also increased from 508,750 to to 593,813. The average daily attendance of women as in-door patients rose from 346 to 367, but was still small in relation to the accommodation available. The increase in the number of women coming to dispensaries for treatment is remarkable; and although in part accounted for by the addition of two Dufferin institutions to the list of dispensaries, nevertheless indicates that substantial progress is being made in the endeavour to induce the women of Bengal to abandon traditional prejudices and subject themselves to rational methods of medical treatment.

10. *Income and expenditure.*—Including the opening balance of Rs. 32,499, the total income of the dispensaries amounted to Rs. 7,20,025 against Rs. 6,14,737 in 1893, when the opening balance was Rs. 25,290. The net increase was therefore Rs. 98,079, which is in great measure accounted for by the inclusion of a number of new dispensaries in the returns. The Government contributions rose from Rs. 41,434 to Rs. 76,918, or from 7·35 to 11·33 per cent. The chief item of this increase was Rs. 20,119 under the head of salaries of medical officers, and of this Rs. 18,243 appears in the accounts of ten Government institutions hitherto excluded from the returns. Local funds contributed Rs. 1,44,300 as against Rs. 1,19,155 and the amounts derived from municipalities rose from Rs. 1,89,658 to Rs. 2,04,464. The head "interest on investments" shows a decline from Rs. 36,906 to Rs. 24,699, which is due partly to the reduction of interest on Government securities and partly to certain sums due as interest not having been drawn within the year. The sums subscribed by natives rose from Rs. 1,60,402 to Rs. 1,83,678, and by Europeans from Rs. 16,333 to Rs. 20,382. Of the increase shown under special allowances, Rs. 6,600 represents the Government contribution to the dispensary building at Samastipur, which should have been shown under buildings and repairs on both sides of the account.

The expenditure rose from Rs. 5,86,366 to Rs. 6,96,102, owing in the main to the increases in the number of dispensaries and of patients treated. The chief item of increase was salaries as stated above, but building charges rose Rs. 40,216 to Rs. 62,026; and the cost of European medicines from Rs. 80,940 to Rs. 1,08,070. No reference is made in the notes to the latter item of increase, but it has been ascertained that although the new system of procuring European medicines, described in paragraph 11 of the Resolution on the Report for 1893, came into force in April 1894, many dispensaries had, by that time, obtained their supplies for the year, and only about fifty indents were submitted under the new system. Although the total expenditure on diet rose from Rs. 66,790 to Rs. 68,478, the average cost per patient calculated on the daily average attendance declined from Rs. 39-7-2 to Rs. 38-9-11. The Lieutenant-Governor believes that this is too low, and he would wish the Inspector-General to enquire into the facts and to ascertain whether undue economy in the matter of diet may not be one of the causes which detract from the popularity of the dispensaries.

11. *Inspections.*—The following statement compares the number of inspections of dispensaries made by Civil Surgeons during the past two years:—

Number of times the dispensaries were inspected by Civil Surgeons.	Number of dispensaries inspected in 1893.	Number of dispensaries inspected in 1894.
Inspected once	38	87
Ditto twice	73	68
Ditto three times	56	64
Ditto four ,,	73	112
Ditto five ,,	15	12
Ditto six ,,	4	2
Ditto seven ,,	1	2
Ditto eight ,,	3	2
Ditto nine ,,	1	1
Ditto ten ,,	1	1
Ditto eleven ,,	1	1
Ditto twelve ,,	1	1
Total	267	303
Not inspected at all	18	16

The increase in the total number of dispensaries inspected, and especially in the number inspected three or four times, and the corresponding decrease in the number not inspected at all, or inspected only once or twice, during the year 1894, is satisfactory. The number of institutions visited four times and upwards is shown in the returns to have risen from 158 to 198, but these returns include the dispensaries at the head-quarters of districts which are inspected daily as a matter of course. Excluding these, the total number of dispensaries inspected by Civil Surgeons was 303 against 267 in the previous year. Among those not inspected at all, the majority were opened or brought under Government supervision towards the close of the year, while others are stated to have been difficult of access owing to floods. The Lieutenant-Governor desires that in future sadar dispensaries should be eliminated from the above statement, which should be prepared only for outlying dispensaries. The number of inspections done should invariably be totalled and compared with the record of the previous year. Sir Charles Elliott again notices with satisfaction the number of inspections made by Surgeon-Colonel R. Harvey, late Inspector-General of Civil Hospitals, which rose from 28 in 1893 to 38 in the year under report.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Government of Bengal.

IRRIGATION OPERATIONS OF CANALS IN BENGAL DURING THE RABI SEASON, 1894-95.

No. 860 I.

GOVERNMENT OF BENGAL—IRRIGATION DEPARTMENT.

Dated Calcutta, the 29th July 1895.

RESOLUTION.

READ—

Statements Nos. I, II, and III showing Irrigation Operations of Canals in Bengal during the *rabi* season of 1894-95.

OBSERVATIONS.—The area irrigated during the *rabi* season of 1894-95 was 48,501 acres against 79,636 acres in 1893-94, showing a decrease of 60·90 per cent.

2. This large decrease was due almost entirely to the unusually heavy rainfall in November 1894 succeeding a very wet kharif season. The ground was so saturated that very little irrigation was required for the cold weather crops. It is, however, noted that in Orissa, notwithstanding the excessive rainfall, the area irrigated was more than double that of the preceding year. This increase was chiefly in *dalwa* rice, of which 5,208 acres required water as compared with 1,161 acres in 1893-94; and in gram, of which 604 acres were irrigated, against no irrigation of this crop in 1893-94.

3. The principal crops irrigated from the Sone Canals in the *rabi* season are wheat, barley, and other cereals; gram and various pulses; sugarcane; opium; and various crops classed under the head Miscellaneous. The largest falling off during the year was in the cereals of which only 16,753 acres were irrigated against 32,713 acres in 1893-94, in the pulses of which 3,747 acres were watered against double that area in the preceding year, and in the crops classed as Miscellaneous of which the area irrigated was only 1,352 acres as compared with 6,131 acres in 1893-94.

4. From the Eden Canal the only crop irrigated during the season was sugarcane, no water being required for *boro* rice and potatoes which were irrigated during 1893-94, while from the Midnapore Canal *boro* rice was the only crop irrigated. There was no irrigation from the Saran Canals during the year as they were practically closed on the 31st March 1894.

5. The details of the increase or decrease in the irrigation of the *rabi* crops from each canal, during the year 1894-95, compared with those of the previous year, are given in the following statement:—

Canal.	Areas irrigated in *rabi* season.		More.	Less.
	1894-95.	1893-94.

* There was no irrigation during the year.

ORDER.—Ordered that this Resolution and the *rabi* and annual statements Nos. I, II, and III, be published in the Supplement to the *Calcutta Gazette*, and that copies of this Resolution and of the statements, be submitted to the Government of India, Public Works Department, for information.

Ordered also, that copies of this Resolution and of the statements, be forwarded to the Commissioners of the Orissa, Burdwan, and Patna Divisions; the Collectors of the Cuttack, Balasore, Midnapore, Burdwan, Hooghly, Gaya, Patna, Shahabad, and Saran Districts; the Superintending Engineers of the Orissa, South-Western, and Sone Circles, and the Examiner of Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

A. D. McARTHUR, *Lieut.-Col.*, R.E.,
Offg. Secretary to the Govt. of Bengal.

Under-Secy. to the Govt. of Bengal.

SUPPLEMENT TO THE CALCUTTA GAZETTE, 31st July 1895.

WEATHER AND CROP REPORT.

For the week ending the 29th July, 1895.

Burdwan.—Rainfall at Sadar 1·75. Weather cloudy and hot. *Aus* and sugarcane doing fairly well. Transplantation of *aman* very backward on account of want of rain. Condition of cattle good. Fodder and water sufficient. Common rice sells from 10 to 20 seers a rupee.

Midnapore.—Rainfall at Sadar 2·19. Weather cloudy. Prospects of *aus* is at stake for want of rain. Common rice sells from 16 to 22 seers a rupee.

24-Parganas.—Rainfall at Sadar 1·94. Weather showery with clouds. Prospects fair, but rain wanted. Transplantation of *aman* going on in low lands, but retarded for want of rain. Fodder and water sufficient. Rice sells at—

Sadar	...	...	...	11 to 13	per rupee.
Barasat	...	...	...	15	
Basirhat	...	...	...	19	
Diamond Harbour	...	...	...	15	

Murshidabad.—Rainfall at Sadar 1 49. Weather hot and cloudy. *Bhadoi* rice and jute are fair. Prospects of mulberry and sugarcane are favourable. *Aman* is being transplanted in some parts. More rain is urgently wanted in many parts of the district. Fodder sufficient for cattle. Common rice sells at 16 seers a rupee.

Khulna.—Rainfall at Khulna 2·10, Bagerhat 1·35, Satkhira 1·86. Weather hot with occasional rain. Transplantation of *aman* still going on. Standing crops require more rain. Price of common rice 16 to 22 seers 2 chitaks per rupee. Fodder and water sufficient.

Dinajpur.—Average rainfall 6·45. Weather hot and rainy. Standing crops doing well. Common rice sells at 14 seers a rupee. No complaint for fodder and drinking water. Cattle-disease in Thakurgaon abating.

Rangpur.—Average rainfall 3·69. Weather cloudy and cool. Transplanting of *aman* continues. Prospects favourable. No cattle-disease. Fodder available. Common rice selling from 12 to 15 seers per rupee.

Pabna.—Rainfall 1·24. Weather hot and cloudy. Prospects of crops on high lands good. Common rice sells at Sadar 17 seers per rupee and at Serajganj 13 seers. Fodder sufficient.

Dacca.—Rainfall 1·66. Weather cloudy. The sudden rise of the river has done some damage to *aus* and *aman* crops in some parts of the Manikganj, Narainganj and Sadar subdivisions. Cutting of juto has commenced. Common rice sells at 19 seers per rupee. No cattle-disease. Fodder plentiful.

Chittagong.—Rainfall 7·77. Weather cooler. Cultivation of *aman* still going on. Water and fodder sufficient. Common rice selling at 18 seers per rupee.

Patna.—Rainfall 3·34. Transplantation of paddy has commenced. Prospect of *bhadoi* crops favourable. Condition of cattle good. Fodder and water sufficient. Common rice selling at 18 seers per rupee.

Gaya.—Rainfall at Sadar 2·25. Prospects of *bhadoi* crops favourable. Transplantation of paddy has commenced. Price of rice at Sadar 14 seers per rupee. Fodder and water ample.

Champaran.—Rainfall at Motihari 2·67. Transplantation of *aghani* crop is going on. Standing *bhadoi* crops are good.

Darbhanga.—Rainfall at Sadar 4·86, Samastipur 4·93, Madhubani 3·26. Transplanting of paddy and *marua* going on. Common rice sells at 16 to 17 seers per rupee. Fodder sufficient.

Bhagalpur.—Report not received.

Purnea.—Rainfall 3·33. Transplantation of *aghani* in full swing. All crops doing well. Cattle-disease is prevalent to some extent. Fodder and water sufficient. Common rice selling from 15 to 20 seers a rupee at Sadar.

Cuttack.—Rainfall 3·66. Weather seasonable. *Beali* rice is being weeded. Transplantation of *sarad* rice in progress. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 25 seers per rupee.

Hazaribagh.—Rainfall at Sadar 2·69. Sufficient rain all over the district. Ordinary monsoon weather. Transplanting of *marua* completed and that of rice in progress. All crops doing well. Fodder ample. Common rice selling at Sadar 12 to 16 seers per rupee and at Giridih 10 to 14 seers.

General Summary.—There was sufficient rain throughout the Province during the week, except in the Burdwan and Presidency Divisions, where the rainfall is still scanty, and is causing some apprehension. Except in those two Divisions the cultivation of the winter rice crop is progressing favourably, and the prospects of the *aus* and jute crops and of other *bhadoi* crops and also of sugarcane are satisfactory. In parts of North and East Bengal *aus* and jute are being harvested. Cattle-disease has appeared in Purnea and in the Contai subdivision of Midnapore. It has abated in Dinajpur. The price of common rice continues steady.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

The average fall of the corresponding period for 24 years, Surveyor-General's Office		32·60

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; lr, lighting reflection; p, passing temporary showers; t, thunder.

N.B.—In the weekly abstract from 9th to 15th June 1895 read 80 for 0 as humidity of the 15th June 1895.

	Inches.
The mean pressure of the seven days	29·494
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·521
	Hours.
The total number of hours of bright sunshine	20·5
The maximum possible number of hours of sunshine	92·7
The mean temperature of the seven days	83·1
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	83·1
The extreme variation of temperature	13·3
The maximum temperature	89·5
	Miles.
The highest velocity of the wind in one hour	12
	°/₀
The mean relative humidity	87
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	87
	Inches.
The total fall of rain from 21st to 27th July 1895	2·09
The average fall of the corresponding period for 24 years, Surveyor-General's Office	3·38
The total fall from 1st January to 27th July 1895	20·38
The average fall of the corresponding period for 24 years, Surveyor-General's Office	32·60

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; lr, lighting reflection; p, passing temporary showers; t, thunder.

N.B.—In the weekly abstract from 9th to 15th June 1895 read 80 for 0 as humidity of the 15th June 1895.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 27th of July 1895.

Meteorological division.	Division.	District.	Station.	Rainfall. Sunday, 21st.	Monday, 22nd.	Tuesday, 23rd.	Wednesday, 24th.	Thursday, 25th.	Friday, 26th.	Saturday, 27th.	Total number of rainy days.	Rainfall of week.	Average rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 16th May 1895.	Average rainfall from 16th May to date.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the return are

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 27TH OF JULY 1895.

At the end of the previous week a low pressure area from the north-west angle of the Bay was moving in a nearly northerly direction over the western districts and was causing moderate rainfall over the whole province. It was filling up rather quickly, and on the 21st, the first day of the week under review, it was shown faintly over the west of Bihar, where pressure was lower than in the surrounding districts and the winds had cyclonic directions. Pressure on this day had fallen briskly in Bihar, North Bengal and Assam, and though the distribution in these parts differed very little from the normal, there was still excess elsewhere of increasing amount towards the south. Rainfall was well distributed except in the south-west of the province, and amounts were large only in the extreme south-east. This appeared to show that the monsoon current was becoming stronger up the eastern side of the province, and it was probably owing to this that heavier rain fell in North Bengal and Bihar during the subsequent days. Temperature was nearly normal, there being a small excess in Orissa and South-West Bengal, and a small defect in the other districts.

The depression which was over Bihar on the 21st continued to exist for several days and moved in an irregular way along a trough of low pressure lying near and parallel to the hills. On the 23rd the centre of the pressure distribution and of the wind circulation was near Bhagalpur, having moved during the previous twenty-four hours eastwards from the west of Bihar; on the 23rd it was over North Bengal. Its eastward movement then ceased, and again going westward, it was over Bihar on the 24th, after which a brisk recovery of pressure led to more normal conditions. During the three days when the depression was over the northern districts, the strongish monsoon current which had been flowing northwards over the extreme eastern districts, was temporarily retarded, and the result was heavy rain in the northern districts, especially on the 22nd and 23rd. On the 24th, when the disturbing effect of the depression was transferred westwards, the heavy falls ceased, and ordinary monsoon weather prevailed in the north of the province.

The steady fall of pressure which went on without interruption in Bengal during these days, and especially in the northern districts, led to a considerable reduction of pressure over the province, as compared with the Bay area. Gradients were in consequence steeper than usual at this time of the year. The moist winds from the Bay being now more free to move over Lower Bengal than had been the case for some time, general rainy weather prevailed in all districts on the 23rd and 24th. Temperature fell, more during the day than the night, owing to the cloudy skies, and means were everywhere in defect by amounts increasing towards the north-west.

About the 25th a general change commenced. Pressure rose briskly in the north of the province, and slowly over Lower Bengal, Orissa, and the north of the Bay, while in the south-east of the Bay a slow fall set in. The disturbing influence of the shallow depression being now removed, and the distribution becoming more uniform, rainfall to a large extent ceased. The skies partly cleared, and temperature rose everywhere, the change moving across the province from the east. As the rise of pressure in Bengal and the north of the Bay continued, though more slowly, on the 26th and 27th, and there was again a slow fall in the south-east of the Bay, the distribution became fairly uniform, and the tendency to the formation of a low pressure area appeared over the north of the Bay. The indication, however, was very slight, and the week finished with comparatively fine weather in the south-western districts and ordinary monsoon conditions in East and North Bengal and Bihar.

Pressure.—Owing to the steady fall which continued during the early part of the week, pressure was about a tenth of an inch below the normal in the northern districts and a twentieth in Lower Bengal. The rise on the 25th and 26th removed this defect, but means for the week are below the normal in all districts, by small amounts generally under ·03 inch.

Temperature was slightly above the normal in Orissa and South-West Bengal in the early part of the week, but with this exception comparatively cool weather prevailed till the 25th, when there was a small excess in East Bengal and a small defect elsewhere. On the 26th and 27th there was excess in mean temperature over almost the whole province. The mean for the whole week is normal in Lower Bengal, very nearly normal in Orissa and Chota Nagpur, and below in the other districts: by about half a degree in North Bengal and one degree in Bihar and Orissa.

Rainfall has been well distributed, as the means for the large divisions do not generally differ much from the normal. The total average fall in these Divisions varies from 2·29 inches in South-West Bengal to 5·76 inches in Bihar. Heavy rain fell in the northern districts on the 22nd and 23rd, and it was general though not usually heavy in the other districts on the 23rd and 24th. At other times rainfall was more scattered, and became very partial in the west of the province towards the end of the week. There is a small defect in South-West Bengal, Orissa, and Chota Nagpur, and a small excess in East Bengal. In Bihar excess is 2·93, and in North Bengal 1·54 inches.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 27th of July 1895 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 and 1892.

The Council met at the Council Chamber on Saturday, the 20th July, 1895.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding*.
The HON'BLE SIR GRIFFITH EVANS, K.C.I.E., *Offg. Advocate-General*.
The HON'BLE H. J. S. COTTON, C.S.I.
The HON'BLE D. R. LYALL, C.S.I.
The HON'BLE J. A. BOURDILLON.
The HON'BLE C. E. BUCKLAND, C.I.E.
The HON'BLE H. H. RISLEY, C.I.E.
The HON'BLE R. C. DUTT, C.I.E.
The HON'BLE RAI DURGA GATI, BANERJEA BAHADUR, C.I.E.
The HON'BLE SURENDRANATH BANERJEE.
The HON'BLE MAHARAJA JAGADINDRA NATH ROY OF NATOR.
The HON'BLE MAULVI MUHAMMAD YUSUF, KHAN BAHADUR.
The HON'BLE C. E. SMYTH.
The HON'BLE A. M. BOSE.
The HON'BLE RAI ESHAN CHUNDER MITTRA BAHADUR.

NEW MEMBER.

The Hon'ble Rai Eshan Chunder Mittra Bahadur took his seat i Council.

PROSPECTS OF BENGALI INSPECTORS OF THE CALCUTTA POLICE FORCE TO PROMOTION AS SUPERINTENDENTS OF THAT FORCE.

The Hon'ble Babu Surendranath Banerjee asked—

Will the Government state how many Superintendents there are attached to the Calcutta Police Force, and how many of them are Bengalis. Is it true that the claims of Bengali Inspectors attached to the Calcutta Police Force have, in many cases, been overlooked in favour of juniors who have been appointed Superintendents in preference to them? Do the orders of Government appointing two natives of India as Assistant Superintendents every three years apply to Indian Inspectors employed in the Calcutta Police? If not, will the Government be pleased to state what prospects of promotion are held out to them?

The Hon'ble Mr. Cotton replied:—

"There are eight Superintendents attached to the Calcutta Police, of whom at present two are Bengalis. One of these holds the post of senior Superintendent on Rs. 500 a month, and the other is an Inspector who is officiating as a Superintendent.

"The Lieutenant-Governor is informed by the Commissioner of Police that it is not the case that the claims of Bengali Inspectors have been overlooked in favour of juniors who have been appointed Superintendents in preference to them.

"The Calcutta Police is treated as a separate service from the Bengal Police, and the orders referred to do not apply to Inspectors in the Calcutta Police. Those officers have prospects of promotion in their own service."

REPEAL OF ACT X OF 1859 (THE OLD RENT LAW).

The Hon'ble Babu Surendranath Banerjee asked—

Will the Government be pleased to state why it is not proposed to repeal Act X of 1859 (the old Rent Law), which is now in force in the Western Duars, notwithstanding the recommendation of the Commissioner of the Division to that effect? Seeing that a Bill has been introduced to repeal Act XVI of 1869, with a view to bring within the cognisance of the Civil Courts all suits belonging to immoveable property, &c., arising in the Duars, will the Government consider the propriety of further extending the scope of the legislation now undertaken by repealing Act X of 1859 and extending to the Duars the provisions of the ordinary Rent Law which is in force in other parts of Bengal?

The Hon'ble Mr. Buckland replied:—

"It is not proposed to repeal Act X of 1859, because it is not in force in the Western Duars, and the Commissioner of the Division, presumably knowing that it is not in force there, has not recommended its repeal.

"The Government cannot consider the propriety of repealing an Act which is not in force in the Western Duars. It has been decided, if Act XVI of 1869 is repealed, to extend to the Western Duars, the Rent Law which is in force in the rest of the Jalpaiguri district, viz., Act X of 1859. It is not considered desirable to have different portions of a district subject to different Rent Acts. The provisions of the Bengal Tenancy Act are not considered suitable to the tenures existing in the Jalpaiguri district."

ALLEGED BANISHMENT OF ALL SANSKRIT GRAMMAR FROM THE CURRICULUM OF STUDIES IN THE GOVERNMENT SANSKRIT COLLEGE.

The Hon'ble MAHARAJA JAGADINDRA NATH ROY OF NATOR asked—

Has the attention of the Government been drawn to the paragraph in the *Indian Nation* of the 15th instant dwelling upon the alleged banishment of all standard Sanskrit Grammars from the curriculum of studies in the Government Sanskrit College by the introduction of a book of much inferior merit compiled by the present Principal of the College? If so, will the Government be pleased to make an enquiry into the matter?

And if on enquiry the allegations be found true, is the Government prepared to take such steps as would remove this stumbling block in the way of acquiring a real knowledge of Sanskrit language and literature?

The Hon'ble MR. BUCKLAND replied :—

"The Lieutenant-Governor learns that the paragraph in the *Indian Nation* is not correct in asserting that 'Sanskrit Grammar has been practically banished from the curriculum of studies in the Government Sanskrit College.' It appears that four different works on Sanskrit Grammar were in use in different classes of the college and school, three of which are still in use unchanged. The fourth book, the Magdhabodha, to which reference is made in the question, was used in the first-year college class and in the second to the seventh school classes. The Principal has now substituted for the Magdhabodha in the college class a work of standard excellence by Pandit Vidyasagar. The Magdhabodha is still used in the second and third school classes. In the fourth to the seventh school class the Principal has introduced a work of his own, called Mani Manjari, written in Sanskrit, not in Bengali, which is said to be easier and more suited to junior students than the Magdhabodha, a work of admitted obscurity. This substitution has not yet been approved of by the Director of Public Instruction, and is still under his consideration."

EDEN HINDU HOSTEL, CALCUTTA.

The Hon'ble MAHARAJA JAGADINDRA NATH ROY OF NATOR asked—

Is the Government aware that the Eden Hindu Hostel of Calcutta, originally established for the convenience of the mufassal students who come to Calcutta to prosecute their studies at the University, has recently been reserved exclusively for the students of the Presidency College? and if so, will the Government be pleased to take steps to restore the Hostel to its former status?

The Hon'ble MR. BUCKLAND replied :—

"The Eden Hindu Hostel was originally established for the convenience of mufassal students prosecuting their studies at the University, but was not reserved, either by trust deed or by practice, for the students of any particular College, though, as a matter of fact, from the commencement the great majority of the residents in the hostel have been students attending at the Presidency College.

"The Lieutenant-Governor has decided that he will build a boarding-house, in which residence should be compulsory for mufassal students of the Presidency College, who do not live with their parents or guardians.

"It was at first proposed to make this boarding-house independent of the Eden Hindu Hostel.

"On the 8th April last the Board of Trustees met and proposed the following Resolution :—

1. *Resolved.*—That as the Government of Bengal has decided to build a hostel for students of the Presidency College, and as such students form the great majority of the residents of the Eden Hindu Hostel, the result of the Government decision, of which the Trustees fully approve, will be to seriously reduce the number of resident students and render

it difficult, if not impossible, for the Trustees to carry on the hostel. In these circumstances, the Trustees are of opinion that the best course for them to adopt, in the interests of the students, and with the object of carrying out completely the purposes for which they have been appointed, will be to hand over the building and land now occupied by the Eden Hindu Hostel to the Government for the purposes of the projected hostel upon such conditions as may be determined.

2. That these conditions be the following:—

(1) that the hostel be retained as a hostel for Hindu students;

(2) that Government pay off the existing liabilities of the hostel, amounting to about Rs. 3,000 more or less, in consideration of the furniture and library of the hostel which the trustees are prepared to hand over to Government on that understanding.

"The conditions were accepted by Government, and an additional block is being constructed alongside of the original building which will nearly double the accommodation.

"Any students belonging to other colleges who are now resident in the Eden Hostel will be permitted to remain; but in future a preferential claim to the accommodation in the Hostel will vest in students of the Presidency College and the two Entrance schools attached thereto. If any space is left unoccupied by them, students from other colleges will be admitted. No change has taken place in the object for which the hostel was originally designed, and no condition was contained in the trust deed antagonistic to the limitation now imposed."

ALLEGED MURDER AT CHITTAGONG.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

I should be glad to know if the Government are now in a position to afford me the information promised in answer to the question I put in Council on the 6th July regarding an alleged murder case in Chittagong.

The Hon'ble MR. COTTON REPLIED:—

"The Magistrate of Chittagong has now fully reported upon the case referred to in the Hon'ble Member's question. The facts appear to be as follows:—

"On the 15th July, 1894, the servant of the Chaplain, the Revd. Mr. Salkeld, who lived in the dák bungalow, reported to a head-constable that a murder had been committed by Babu Kanti Chunder Ghose in a house adjoining the dák bungalow. This information was entered in the station diary at 11-20 P.M., and a police officer was sent to enquire, who returned saying he could find nothing in the house to corroborate the information. Next day on the 16th July, 1894, the Sub-Inspector of the town station in Chittagong reported to the Magistrate of the district that a false charge had been made by a servant in the employ of the Revd. Mr. Salkeld that a murder had been committed by Babu Kanti Chunder Ghose, a railway contractor, and requested that Mr. Salkeld's servant might be prosecuted for laying a false information. It appeared to the Magistrate, Mr. Anderson, that the charge was assumed to be false on incomplete grounds, and he directed Mr. Daly, the Officiating District Superintendent of Police, to enquire into the matter personally.

"After this, anonymous petitions were received, charging Babu Kanti Chunder (without any such further specification as Roy or Ghose), the railway contractor, with the murder. There was no doubt whatever as to who the person was at whom the petitions were aimed.

"On the 21st July Mr. Daly arrested Babu Kanti Chunder Ghose on suspicion and brought him before the Magistrate, who passed the following order:—

'Kanti Chunder Ghose has been brought before me, and I direct that he be kept in *hajut* under section 167, Criminal Procedure Code, for a period of 15 days or less in case a final report be received. There is strong suspicion that on the night of Sunday, the 15th instant, he so severely assaulted his servant that the man died, and there is some evidence to show that the body (that of a stranger) has been concealed. Accused is himself a stranger and is said to be leaving Chittagong by to-morrow's steamer.'

"On the 23rd July an application to release the accused on bail was made. The Magistrate called upon the District Superintendent to show cause why

Babu Kanti Chunder Ghose should not be released on bail. On the 24th July Mr. Daly produced eight witnesses whose statements were fully recorded by the Magistrate. This evidence has been laid before Government, and it appears from it that Mr. Salkeld's servants declared that they had seen the accused severely beating a man who was lying on the ground, and that Mr. Salkeld and his mother-in-law, who lived with him, deposed to having heard blows and groans. On the 25th July the Magistrate passed the following order refusing bail:—

'The District Superintendent of Police has shown cause by sending up some witnesses whose statements I have recorded. There seems to be no reason to doubt that some one was cruelly beaten on the night of the 15th July: that the only servant now in the employment of the accused person was not the person who was beaten (I have examined him, and he has no bruises or other marks). There is evidence that accused immediately called in the assistance of a Police Inspector (Officiating Inspector Rajani Kanta Chaudhuri), and that whatever occurred was at once hushed up. I mention all this to show that there is, at least, the gravest cause for suspecting that the accused's servant succumbed to a very severe beating, and that the body was smuggled away. Then I must remember that the accused person is not only a man with much local influence, but also a foreigner, a man who could easily make his escape into hiding outside the district. As the offence with which he is charged is non-bailable, I think there is more than enough evidence to justify the detention of the accused in custody.'

"Two or three days after this Mr. Daly was transferred to another district, and Mr. Anderson went away on leave. On the 6th August an application was made by the police to Mr. Allen, who was officiating as Magistrate, for a second remand of ten days, and this was granted by him in the following order:—

'I have very carefully considered the special diaries, statements recorded, and all the proceedings of this enquiry. I am of opinion that the enquiry is not yet complete, inasmuch as further investigation is necessary to ascertain the whereabouts of the man who is alleged to have been murdered. This man is reported to be missing, and until his whereabouts are ascertained, or a reasonable opportunity for enquiry has been granted, the case cannot be closed. All the reasons recorded by Mr. Anderson on the 25th July last therefore still apply, and I therefore under section 167, Criminal Procedure Code, remand the accused to *hajat* for a further period of ten days, or until such date within that period as the enquiry may be completed.'

"On the 11th August an application was made to the Sessions Judge for the release of the accused on bail, but Mr. Caspersz declined to interfere.

"On the 15th August another application for a third remand was made to the Magistrate by the police; but, as it was clear by this time that further evidence was not likely to be found, Mr. Allen directed the release of Babu Kanti Chunder Ghose on bail in the following order:—

'A further application has been made by the police for remand in *hajat* for seven days, the grounds mentioned being general only. I do not think I should be justified in granting a further remand in *hajat*, unless the nature of the evidence which is likely to be obtained were in some way specified, and unless it was explained why this evidence has not been forthcoming earlier. This has not been done, and I am not justified therefore in remanding the accused to *hajat*. There is, however, evidence to implicate him in the murder, and I therefore order him to find bail as follows, viz., his own recognizances in the sum of Rs. 1,000, and four sureties in the sum of Rs. 250 each, to appear before this Court on the 22nd instant, or at any earlier date upon which he is called upon to appear.'

"On the 22nd of August Mr. Allen declared that there was no further reason for detaining the accused, and directed that he be discharged from bail and recognizances.

"With reference to the Hon'ble Member's question whether the man who was supposed to be murdered was found living in the Backergunge district, I have to say that it is the case that enquiry was made in Backergunge about a man named Jotendro Mohun Bose, who was asserted to have been once in Babu Kanti Chunder's service, and that this man was ascertained to be alive in that district; but there was no evidence to prove that he ever was in the service of the accused or was in any way connected with this case.

"The Lieutenant-Governor has examined the records submitted by the Magistrate, and, while he is satisfied that there was ample room for suspicion and enquiry, he does not consider that there is any reason for thinking that the Magistrate or District Superintendent of Police showed any want of discretion in their treatment of the case."

THE BENGAL SANITARY DRAINAGE BILL.

The Hon'ble Mr. LYALL moved that the final report of the Select Committee on the Bill to facilitate the construction of drainage works for improving the sanitary condition of local areas be taken into consideration in order to the settlement of the clauses of the Bill, and that the clauses of the Bill be considered in the form recommended by the Select Committee.

He said:—"I do not propose to detain the Council now with any general remarks, but would defer to a later stage any such remarks which I might have to make."

The motion was put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE moved that for clause (*e*) in sub-section (2) of section 6, the following be substituted:—

"An estimate showing, as the District Board may direct, (*a*) the rate bearing the definite proportion to the Road Cess payable direct to Government, or (*b*) the assessment on each village within the affected area, the amount being raised by levying at the discretion of the District Board a tax upon persons occupying holdings within such tract according to their circumstances and property, or by levying a rate on the annual value of holdings situated within such tract:

"Provided that the amount specified in the estimate shall provide for the payment with interest in the course of thirty years of (*b*) and the capitalized value of (*c*), excluding the portion to be incurred in respect of the municipal area, if any."

He said:—"I desire first to say a word or two with reference to a feeling of alarm which may be created in the minds of hon'ble members at the sight of the formidable array of amendments standing in my name. I wish to point out that several of those amendments hang together, and that they depend upon the success of the amendment which I have now the honour to move. For instance, amendments Nos. 1, 4, 7 and 9 are practically part and parcel of one and the same amendment. They relate to the financial clauses of the Bill. If amendment No. 1 be accepted, then it will follow as a matter of course that the other amendments to which I have referred must also be adopted with such modifications as the wisdom of the Council may dictate; but if this amendment be lost, the others must also fall with it. As far as the other amendments are concerned, it will not be necessary for me to speak at any length.

"I feel it my duty to congratulate the Government on the thorough discussion which has been accorded to this Bill. Whatever may be the defects of the Bill—and these are neither few nor insignificant—it will be conceded on all hands that the measure has received the most careful consideration at the hands of the Select Committee, and I venture to add of the public at large. It was twice referred to two different Select Committees. It were much to be wished that some of the new members of this Council were on the Select Committee recently appointed. It was twice published in the official Gazette. On two separate occasions the opinions of public bodies and of the high officers of Government were invited. As the result of this exhaustive enquiry, we have this Bill before us. As might have been anticipated, the Bill which now awaits the consideration of the Council is a very different measure from the Bill which was introduced in 1894. The Bill recognizes the principle of local option. Under the Bill as originally introduced the Magistrate or the District Board could initiate any drainage project. Under the Bill now before us, the initiative rests with the District Board, and the District Board alone. The District Board may initiate, may approve, may modify, or may reject any proposal. Nor is this all. The representatives of the landed interest have a voice in the deliberations connected with any drainage scheme. Hon'ble members who have carefully studied the Bill will not have failed to note the responsible functions which the Drainage Commissioners are required to perform under the Bill. Their decision will be final except when the District Board at a special meeting called for the purpose should, by a majority of two-thirds of the members present, decide to set it aside. These, so far as they go, afford sufficient guarantees that public opinion will be consulted and will not be disregarded. I desire once more to affirm that the Government in introducing this measure has been actuated by the purest and the loftiest

motives. I do not care to discuss the question whether malarial fever is due to poverty or to obstructed drainage. There is a large body of medical evidence—the evidence of experts whose opinions are entitled to the highest weight and consideration—which places this matter beyond the pale of doubt and controversy. It is admitted beyond dispute that obstructed drainage is the chief, if not the only factor in producing malarious fever, and that poverty accentuates the conditions which produce the disease.

"But the difficulties of the Bill lie in respect of its financial clauses. I should rejoice if the Government could see its way to enact this Bill into law without imposing any cess or rate upon any section of the community. I would go further and observe that the public had a right to expect immunity from taxation for the purposes of this Bill. Let me briefly remind the Council of the circumstances connected with the passing of the Road Cess and the Public Works Cess Acts. The Duke of Argyll was then Secretary of State; he indited a despatch—it is a memorable document—in which he distinctly laid down the principle that the Road Cess which was to be levied on villages should be primarily devoted to the sanitary improvement of those villages. Has that been done? No. If this had been done, there would have been no necessity for a measure of the kind now before the Council. Nor is this all. The Road Cess has been charged with works which used to be carried out either from Imperial or from Provincial funds. Then again, when the Public Works Cess Bill was introduced into this Council, Mr. Herbert Reynolds (a name held in honour by all ranks in this Province), who was in charge of the Bill, distinctly declared from his place in Council that the proceeds of the Public Works Cess were to be devoted to meeting famine charges and certain other extraordinary Public Works charges which he specified. But after defraying those charges we have an annual surplus balance of nearly 11 lakhs of rupees, as was shown by the Hon'ble Mr. Bourdillon in his financial statement this year. What becomes of this balance? It is devoted to the carrying out of ordinary public works. If that balance were available, would it be necessary to impose any rate or cess under the Bill now before the Council? I submit not. Under the circumstances, I trust I shall not be deemed an irreconcilable if I venture to record my respectful but firm protest against any tax or rate being levied upon any section of the community for the purposes of this Bill. The proceeds of the Road Cess and of the Public Works Cess ought to suffice to meet the expense of the drainage schemes that may be carried out under this Bill. In proposing this amendment, it must not be supposed that I acquiesce in any system of taxation contemplated under the Bill. As taxation is, however, inevitable, my amendment proposes alternate schemes which are less open to objection.

"It is proposed under the Bill to meet the charges of drainage works by the addition of a definite proportion to the Road Cess. On whom would such a tax fall? On the landed interest alone. But who would be benefited by these works? Not only the landed interest, but all interests; the artizan, the shopkeeper, the trader, the zamindar, the raiyat, would equally benefit from the sanitary works proposed to be carried out under this Bill. Manifestly, therefore, it is inequitable to tax a particular section of the community for blessings which would be shared by all. The object of my amendment is to rectify this anomaly. I propose that, subject to the discretion of the District Board, the charges for drainage works should be met by an addition to the road cess or by a tax upon persons occupying holdings according to their circumstances and property, or by a rate on the annual value of the holdings situated within the local area. The last two forms of taxation would include everybody benefited by the drainage scheme. But I have been told by hon'ble members of the Select Committee and by the members of the Government, that my schemes are impracticable; and a morning paper, which amuses and instructs us from day to day, has improved upon the situation by observing that, being born and bred in Calcutta, I ought to hold my tongue when a measure is introduced in this Council affecting mufassal interests. Well, Sir, I have not yet learned to hold my tongue. That may be a defect in my education, but I am too old to unlearn. I may be an ignoramus in regard to mufassal affairs; but there are others who are differently situated—experts intimately acquainted with the

mufassal and with the working of Local Self-Government in the mufassal, both within municipalities and local areas. I have taken the precaution of consulting some of these gentlemen, men of light and leading in the mufassal, and I have got their replies. I do not want to read those replies to the Council in full, but I will read one or two extracts from them with a view to show that, in the opinion of gentlemen who are conversant with the working of the system of Local Self-Government in rural tracts, the scheme which I have ventured to formulate is a scheme which is workable. The Vice-Chairman of the Hooghly District Board, Babu Lalit Mohan Singh, says—'In reply I beg to say that I do not think the two schemes to be impracticable. I would have given my reasons if my answer had been otherwise.' Therefore, in the opinion of this gentleman, intimately acquainted with the working of the District Board and of Local Self-Government in the mufassal, the scheme which I propose is feasible. Another letter is from a very distinguished Municipal Commissioner, a gentleman who at this moment is contesting the Dacca Division for representation in this Council, Babu Guru Proshad Sen. He says—'I do not think (*b*) and (*c*) would involve any impracticable scheme. As you point out, the chaukidari assessments are made under that system.' Then there is a letter from Rai Jadunath Mukerjee Bahadur, Government Pleader of Hazaribagh, who says: '(*b*) and (*c*) follow the municipal law, and it is quite fair that one or other of these methods should be adopted in the matter. The assessments may be made in the manner they are made in the municipalities and by the adoption of one of those methods. Those who would otherwise escape assessment will come in under the law.' Babu Pyari Lal Roy, who for many years was a member of the District Board of Barisal, says:—'I like your (*b*) scheme, and I would make it compulsory and not leave the matter to the discretion of the District Board.' And, lastly, I have a letter from Baboo Baikantonath Sen, late Chairman of the Berhampore Municipality and the leader of the Berhampore Bar. He says:—'In reply to your letter of the 12th instant, I have at the outset to express my approval of your suggestion regarding the imposition of a tax as contemplated in (*b*) and (*c*). The panchayat agency might also be used for the assessment and collection of the tax, and I think efficiency and economy would both be secured. * * * I cannot understand why the imposition of the tax contemplated in (*b*) cannot be satisfactorily effected. Village Unions have come into existence in some places, and whenever available their services also might be utilised.'

"Here we have the opinion of a body of experts, and I think the Council should attach some little weight to that opinion. But why should the scheme be held impracticable? I think it very unfair to pronounce judgment before trial. Have you tried it, and have you found it to be impracticable? You have not; therefore you are precluded from expressing an authoritative opinion upon the matter. Many schemes which are held to be impracticable at the outset have been found to be quite feasible in their working. Therefore, I say we ought to give it a fair trial before we pronounce judgment against it. The panchayat may be used for the purpose, or an assessor may be appointed, or any other agency the Magistrate thinks fit may be employed. I am free to admit that the appointment of an assessor would involve a little more expense, but then the system of taxation I propose will be a little more remunerative, as it will embrace a wider circle of the population.

"Then it is to be borne in mind that my amendment proposes alternate schemes. It is not obligatory on the District Board to adopt the forms of taxation I have put forward. They may make their choice. If they find them to be impracticable, they will not adopt them; and if the majority of the District Boards come to the same conclusion, my scheme will die a natural death. No one will regret it, not even the unworthy individual who now stands sponsor to it. Thus it is evident that the Government will lose nothing by the acceptance of the alternate schemes which I have put forward.

"Nor is this all. It would be a source of great moral strength to the Government to be able to convince the people by the adoption of the alternate schemes which I have suggested that the Government did what lay in its power to avoid an inequitable system of taxation. If you have three alternate projects on the statute-book, and the addition to the Road Cess is uniformly

accepted in preference to the other methods of taxation, those who pay it will be reconciled to it; they will regard it as the only practicable scheme; they will submit to the inevitable. Is it not a distinct advantage to the Government to be able to carry the people with them in any legislative project, and especially one which involves the imposition of a new tax? I desire to press this consideration upon the attention of the Government. I feel that by accepting these alternate schemes the Government will have taken an important step towards conciliating popular opinion, removing a felt grievance, and making less unpopular a measure which is admitted to be highly unpopular."

The Hon'ble MR. LYALL said—"The hon'ble member who has just moved this amendment has commended it to the Council on the principle of its being a very little amendment, but I hope I shall be able to convince the Council that the amendment will be practically unworkable. The Council will observe that the foundation of the cess or rate which it is proposed to lay on the people under this Bill is a thirty-years' term. If it is necessary for a rate to be levied for thirty years, it should have some stable foundation. What my hon'ble friend has proposed is in the form practically of an income-tax, a tax on the circumstances of the people, which will vary every year. There will be no stability; one man goes away, another dies, a third fails in his business. Again, we should have the whole oppressive system of the machinery of the income-tax applied for the assessment of the tax. We all hope that this rate wherever it is imposed will be a light one, but if it is imposed in the way in which my hon'ble friend proposes, we should impose the greatest possible amount of tax on the people, and do the greatest possible injury to them. This fact was very forcibly brought forward some six years ago in this Council. Speaking of the assessment of the chaukidari tax by assessors, the Hon'ble MR. ANUNDO MOHUN BOSE spoke of 'the evil of the tax-gatherer going from hovel to hovel and collecting from each his quota, and perhaps, not unfrequently, a good deal more. A great deal had been heard in this country in connection with the fiscal measures of the Government of the evils of direct taxation, not necessarily attendant on the system, but under the circumstances of the country; but when an unsympathetic Government tax-gatherer, with all the powers proposed to be conferred on him and who must render his account at a certain time, went from house to house to collect the tax, it must necessarily open the door to a great deal of oppression and create discontent among the masses.' I say that that fear is shared all over the country. We know that even in the case of the income-tax which is assessed on the people with infinitely more care, we do not get it fairly assessed; although we employ persons of a considerably higher status than would be employed for the assessment of a petty tax such as this. And I go further and say that the hon'ble member has given us nothing that will work; he has not provided for the pay of the assessor and for including it in the estimate. I will not detain the Council by quoting from Mr. Munro's report on the working of the Chaukidari Act; the Council know how it was there stated that the rich and the Brahmans were exempted from taxation, and the poor alone were assessed. The punchayet would in the same way use the power which the amendment proposed to confer upon them for their own benefit. Then my hon'ble friend does not propose to give the Collector the assistance of an assessor or a punchayet until he comes to the last stage. Under his 6th amendment he proposes that the Collector shall make the assessment how he may: he gives him no machinery. The Collector has no machinery fit to revise the estimates; he would have to employ men, and where were the men to come from? The hon'ble member does not object to the proposal of the Select Committee; but he would weld his own proposals with it. I venture to say that the proposal of the Select Committee will really do justice. In this country it is known as a fact that almost every man is a landholder. I will read an extract from the *Amrita Bazar Putrika* of 28th February last. This paper objected to the Bill 'as throwing an additional tax upon the landholding and agricultural communities, that is to say, on the whole Province of Bengal, for there are few men in Bengal who do not hold land in some way or other.' This newspaper therefore admitted that the imposition of this tax on the land was fair. I will go further and say that the land is stable; the land is there, and we shall be as sure to get our tax thirty years hence as on this day, and I know no other way of having such surety. I have already said that under the

hon'ble member's proposal there would be no certainty that the amount of the tax would be the same from year to year; the Collector would have to vary the rate of tax, and that would be undesirable. For these reasons I venture to submit that the proposal of the Select Committee is the cheapest and best possible of all. There is the machinery ready and at hand, and it will cost nothing to extend it to this small extent. The landholder will not have to employ a single extra gumashta, nor will the Collector have to add to his staff of peons and amla. We have the machinery ready for use. I venture to say that although the proposal of the hon'ble member sounds well, it is so only seemingly, but in practice it will be found unworkable; and I therefore ask the Council to reject it."

The Hon'ble MAULVI MAHOMED YUSUF said:—"I submit that this amendment should not be accepted. The question raised in the amendment was fully discussed in the Select Committee, and the conclusions of that Committee were arrived at after due deliberation and after a careful and mature consideration of the various courses suggested by the members of the committee: the result was that the only feasible and practicable course that could be found was that embodied in the Bill: other ways were suggested, but on examination they were found impossible. As far as the speech of the hon'ble mover of the amendment goes, the matter remains now where it stood in the Council, and no attempt has been made even now to show how the suggestions overruled by the majority of the Select Committee would be practically carried out. Therefore the objections raised in the Select Committee to what is contained in the amendment, not having been met, the question remains in the same state. One view was suggested in the Select Committee, and the same is foreshadowed, if not expressly put forward, in the speech of the hon'ble member, viz., 'If the scheme is not feasible, I do not put it forward as a compulsory scheme, let it remain as an alternative scheme open to the District Board; if they think the scheme not to be feasible, they need not adopt it.' In reply to all this I say that if it is not possible at the present moment for any hon'ble member to point out the practicability of the scheme proposed or suggested, it is not consistent with reason that the statute should provide that scheme to be one open to the District Board to adopt. And we should not forget that if this scheme is to find a place in the Bill even as an alternative measure, it will go forth to the public as a scheme which this Council held as a possible scheme; the scheme will thus be stamped indirectly with the sanction of this Council in regard to its feasibility, and it will be urged hereafter that if the scheme had not been feasible, then the Council of the Lieutenant-Governor would not have allowed it to find a place in the Bill; the intentions of the Council would thus be liable to misconstruction, and in practice feasibility would be forced on the scheme. I therefore think that this amendment will work incalculable mischief, without resulting in the smallest good to the community.

The Hon'ble RAI ESHAN CHUNDER MITTRA BAHADUR said:—"This is the first time I appear before this Council, and therefore I shall be excused if I do not exactly conform to the rules and the procedure of this Council. My ideas on the subject before the Council are these—Any proposal to tax a community according to their circumstances and property would lead to the levying of a tax in the shape of an income-tax, and if such a proposal is adopted, the result will be that enquiry must be made into the circumstances of each person who lives within the local area, both as to his income from personal property and from his real property. And I may be permitted to observe that such a tax would operate as a second income-tax. The amendment proposed is, no doubt, equitable in principle, but it would be difficult, as I said before, unless it is allowed to work as an income-tax, to ascertain what is the position of particular individuals in order to fix the assessment upon them. Then again a certain income has to be calculated upon for thirty years, but the circumstances and property of individuals might vary within that period, and how is the fixed income which is needed to be then obtained? Moreover, I think, from what I know of the mufassal, that such a provision would hardly be liked by the people. I find that under this Bill landholders will have to take upon themselves the liability of paying and also partly recovering from the cultivating raiyats the sanitation

cess, but the question is whether any tax can be appropriately levied in matters like these, unless we tax the land. The land has already been taxed heavily; landholders have to pay land revenue, they have to pay the road cess, they have to pay the public works cess, and also other cesses, but it is said that there is no feasible way of realising the money which would be spent in making any improvement, unless we can tax the land itself. I may be permitted to observe that there are only two modes of taxation in matters like these—first, in regard to a man's position and occupation, and secondly, regarding him as a holder of property; and if we go to assess him upon his means and his property, we have to enquire into particulars to ascertain what the assessment should be. I submit that a tax like the one contemplated under this Bill ought to be as small as it possibly could be. If land is to be taxed I can only say, with regard to the section which refers to the realisation of dues under process issued under the Road Cess Act, that instead of realising half from the zamindar and the other half from the patni-holder and the raiyats, we should divide that liability into smaller component parts—say one-fourth from the zamindars, one-fourth from the patni tenure holders, and the other half from the raiyats who would be mostly benefited by the improvement both in regard to their health and the condition of their lands. The liability of zamindars and tenure-holders, many of whom are non-resident, should be reduced, and the raiyats should bear a greater portion of the burden, because they are the persons who will be mostly benefited. In that case the tax would not operate with that degree of hardship to which my hon'ble friend, the mover of the amendment, has objected. I have not been able to consider whether such a scheme is feasible, but I hazard this proposal because I think that in order to make the tax acceptable to landholders it should be reduced. I commend this proposal to the consideration of the Council, because landholders will not be paying this tax for their own benefit, but for the benefit of their tenants, the raiyats, and they ought not to be taxed to the same extent as those who will be actually benefited. All I need say is that I consider the rate which is to be paid by landholders and tenure-holders to be rather high; they would not be benefited as much as the actual occupiers of the villages, and I submit that the Council should agree to a compromise by reducing the liabilitity of land-holders and tenure-holders, and putting the rest of the expenditure upon the occupiers of the land and upon the contributions from Government and the District Board. It may be said that the raiyats are poor; still they are the most benefited, and under those circumstances they ought to pay comparatively more than landholders and tenure-holders who are mostly non-resident."

The Hon'ble Mr. A. M. Bose said—"Not having had an opportunity of fully studying the question which has been before the Council now for more than a year, I had not intended to take part in this discussion; but after the reference which the hon'ble member in charge of the Bill has done me the honour of making to a previous utterance of mine in this Council, I think it necessary to state shortly my reasons for voting in favour of this amendment. But in the first place I wish to associate myself with the expressions of regret and protest which have been given utterance to in this Council at the birth of the new form of taxation which will come into existence on the passing of this measure; and all the more so as the forms of taxation already in existence were intended in the main to provide for necessities of the kind which it is in contemplation to meet by this Bill. But I take it that it is too late to enter with profit into any discussion of that kind at the stage which the Bill has now reached. Leaving that question aside, I submit that there is a great deal to commend, if not the exact form of the amendment, at any rate the principle which underlies it.

"It has been pointed out, and it has not been denied, that the object of the Bill is to benefit in the matter of health and sanitation all the residents of certain areas which may be brought under its operation. Therefore it is only right and equitable that every one to the extent of his means, and so far as may be practicable and reasonable, should bear the burden of the taxation rendered necessary for such purpose. We all know that it is not a particularly agreeable feeling which one entertains when one is subjected to the pressure of a new tax,

to the operation of a 'new scheme of drainage' on the purse; and that feeling will not be improved if it is found that others who enjoy the benefit will be exempt from the necessity of paying for it. As a matter of fact there is in connection with this Bill that feeling, that sense of unfair treatment and irritation, amongst the representatives of the landed interest. And in a question of this description I think from considerations of justice and fairness, and also, I venture to appeal to the Council, from considerations of political wisdom and expediency, it is desirable, if it can be done, to remove that feeling of unfairness and to allay that sense of irritation. Only yesterday I received a letter from one of the most honoured representatives of the zamindari interest —unfortunately I have not brought that letter with me—stating that the feeling is growing among landholders that whenever there is any reform to be carried out which would confer benefit, real or fancied, on the community generally, those connected with the land are singled out for taxation, because the machinery for subjecting them to that operation is ready at hand.

"Though speaking generally, and in the main, it may be truly said that in the rural areas those engaged in trade are also interested in land, yet there are exceptions, and marked exceptions, to the rule. I myself know of tracts in which there are flourishing marts or bazars containing a large number of well-to-do members of the trading and mercantile classes, foreigners to the district and having no interest in any land in or about the locality, who would be exempted from the operation of the Bill, if those places happened to be within the affected area.

"But the objection which has been taken is not to the principle of the amendment, which is admitted to be just and fair, but to its being impracticable in working. I need hardly say I feel highly honoured by the reference to my previous statement in connection with the Chaukidari Bill; but in the present case there are two or three considerations of an important character which I beg leave to point out, and which distinguish this scheme from the case then under consideration. In the first place there is an important question of principle involved in the present case which did not then exist. And I may observe that as regards the imperfections of the mechanism proposed, I am confident the Select Committee, should the matter be referred back to them, will be able to find a practical means by which justice to all classes will be secured, and the incidence of taxation will be made co-extensive with the necessities of the situation. Proceeding further, not only is the principle one which requires taxation of a somewhat more extensive kind than that contemplated in the Bill, but in the second place there is ample and unfettered discretion left in the hands of members of the District Board as to the particular form of taxation to be adopted in any individual case, having regard to the actual facts or requirements of that case. I submit that will make a very important difference in the character of the measure, considering that the members of the District Board will be representatives of the inhabitants of the district. Even if there be any fear of difficulty in the working of some of the alternative schemes, any feeling of that kind will be more than counterbalanced by the advantange to be derived from a strict adherance to fairness and justice, and the remedy as regards such difficulty will be in the hands of the Board. They will be most qualified to determine whether such fears in any case are real, and they will further have the means ready at hand to remedy that defect by adopting the scheme now contained in the Bill, and which will, of course, be retained. If on the other hand no attempt to apply any of the alternative schemes is made by any District Board, those who represent the rajyats and zamindars will have no ground to complain, a sense of injustice will not be rankling in their minds, because they will find that although the legislature had armed the District Boards with the power of extending taxation, the practical difficulties in the way made that extension extremely undesirable. And in the third place, as regards the feasibility of working the alternative schemes (*b*) and (*c*), if indeed it be, as pointed out by the hon'ble member in charge of the Bill, that provisions of this kind would be practically a tax on incomes, I would observe that just as there is at present the road cess procedure for realising the tax now in contemplation, in the same way there is, fortunately or unfortunately, a very extensive machinery for the working of the income tax. Here also it may be feasible to combine one machinery with the other.

appeals after objections had been made and had been overruled. That weighed upon me very much, and it was with a great deal of relief that I received a suggestion from Mr. Duke, the Collector of Hooghly, who has had great experience in working the Agricultural Drainage Act, and whose assistance has been invaluable in framing the provisions of the Sanitary Drainage Bill. It is his proposal which we have adopted in making use of a machinery which exists and which is working fairly well, namely, the machinery of the Road Cess Act. It would be a most retrograde step now to leave this machinery which exists and to go to a new machinery, which we should have to create, and I am sure no practical man, who has thought over the difficulties which lie in the way of this Bill as I have done, would dream of going back from a machinery which is existing and which we can adopt, to propose a new machinery which has to be worked out.

"The idea of utilising the machinery of the Chaukidari Act has not been supported by a single member, except the hon'ble member himself, and that not very strongly. The idea of utilising the machinery of the Income-tax Act has hardly been discussed, and I will dismiss it with the simple remark that I am satisfied that the Government of India would not sanction our utilising a machinery which is for the collection of an Imperial tax in order to tack on to it a small provincial tax. They would say that they require the free power of dealing with the income-tax as the sheet-anchor of Imperial finance. They may, at any time, desire to raise the percentage at which the income-tax is now collected, and it would be fatal to their own financial position if, at the same time as they had to enhance their own assessments, a small provincial leech is attached to it which would suck at the same source and deprive them of part of the extra amount which they wish to raise.

"I therefore hope the Council will agree with me that neither the machinery of the chaukidari-tax nor of the income-tax can be applied to the object of taxation under this Bill, and that the idea of inventing new machinery for it is not to be tolerated. And even if it were to be tolerated, as the learned Advocate-General and other hon'ble members have pointed out, we have not the details of the machinery placed before us. As Mr. Risley has pointed out, the amendment will not achieve the end aimed at by the hon'ble member, but the very reverse. To pass this amendment would be to wreck the Bill. It would be necessary to send the Bill back to the Select Committee to consider this and the subsequent amendments bearing upon it so as to see how they could be worked. The Council could not pass the Bill in the state in which it would stand if this amendment were passed. Therefore on all grounds, both theoretical and practical, I think that this amendment must be resisted, and I should wish, for the sake of the unanimity of the Council in carrying this Bill through, that the hon'ble member would see how desirable it is that we should have a unanimous vote on this important subject."

The amendment was by leave withdrawn.

The Hon'ble MR. LYALL moved that the following words be added to section 2—

'The words 'cultivating raiyat,' 'estate,' 'holder of an estate,' and 'tenure' shall have the meanings attached to them in the Road Cess Act, IX (B.C.) of 1880.'

He said—"The reason for asking leave to add these definitions is this. At one time when the Bill was in Select Committee, it was decided that the cess to be raised under this Act should be levied under the machinery of the Road Cess Act; some objection was raised, and finally sections 23 and 24 were inserted in the Bill. These definitions existed in the early draft of the Bill, but were omitted subsequently, and it was only yesterday pointed out to me by my hon'ble friend, MR. R. C. DUTT, that it would be advisable to insert these definitions. The Advocate-General was consulted, and he agreed that their insertion is necessary."

The motion was put and agreed to.

The Hon'ble MR. LYALL moved the following amendment in section 9—that in place of the words "at a special meeting" at the end of the section, the following be substituted—"at a meeting specially called for the purpose."

He said:—When the Select Committee were drafting the Bill, they failed to note that in the present Local Self-Government Act there is no provision for a special meeting of the District Board. The object to be attained is exactly the same. Instead of 'a special meeting,' we propose that the District Board shall take the preliminary scheme into consideration at a meeting to be called for the purpose. The words 'special meeting' had a particular meaning in the old District Board Act, but they have been entirely omitted in the Local Self-Government Act. The amendment therefore stands thus, that in section 9 the last words 'at a special meeting' be struck out and the words "at a meeting especially called for the purpose" be substituted for them; and that in the first line of section 11 the word "special" be struck out.

The motion was put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE moved that for the first sentence in section 11, the following be substituted:—

'If at a meeting specially called for the purpose, a majority of the members present, acting on the advice of the Commissioners, or with the approval of a majority of not less than two-thirds of such members (such meeting to consist of not less than two-thirds of the total number of members of the Board) acting against the advice of the Commissioners, adopt the preliminary scheme, they shall revise it in the following manner.'

He said:—"This section deals with the procedure which the District Board has to follow when it has to consider the report of the Drainage Commissioners. The report is to be considered at a meeting to be specially convened for the purpose. If the report is adopted by the District Board, it will be adopted by a majority, but if the report is rejected, a further safeguard is provided. It must be rejected by a majority of two-thirds of the members present. I have not the smallest objection to a majority of the meeting adopting any scheme on the advice of the Drainage Commissioners, but I contend that when the report is rejected it should be rejected at a very full meeting of the District Board; and therefore I beg to submit for the consideration of the Council that the decision of the Drainage Commissioners should not be rejected except at a meeting where at least two-thirds of the entire number of members of the District Board are present. My amendment is in the nature of a compromise. In the Bill first revised by the Select Committee, the section provided that if the scheme of the Drainage Commissioners was to be rejected, it should be rejected at a meeting of two-thirds of the total number of the District Board. When I called attention in Select Committee to section 10 of the Bill as revised by the first Select Committee, which laid down the provision to which I have just referred, I was met with the remark that it would be impracticable, that you would never get two-thirds of the whole number of the District Board to be present at a meeting. However that may be, my present proposal cannot be regarded as impracticable, for it is supported by the high authority of a Magistrate of the district, who is also Chairman of the District Board. The Magistrate of Faridpur, writes:—'I should prefer a majority of two-thirds of the members present at a meeting specially convened for the purpose of considering the scheme, such meeting to consist of not less than two-thirds of the total number of members of the Board.'

"We may be sure that a District Magistrate would not make a recommendation of this kind unless it involved a perfectly feasible proposal."

The Hon'ble MR. LYALL said:—"I cannot recommend the Council to accept the present motion. The question was very fully considered by the Select Committee, and the reason which induced them to make the recommendation is that the District Boards are large bodies, consisting of men residing in all parts of the district, and it is almost impossible for them all, or even a large majority, to attend meetings. From the statistics I find that the number of members who attended meetings in the year 1893-94 was only 46·9 of the total number. You cannot expect attendance at meetings in the mufassal such as you expect in municipalities and other bodies where the members live close to each other. Taking these facts into consideration, the Select Committee were of opinion that the wording of the Bill is sufficient, but I am quite willing, if the hon'ble member will reduce the number to one-half, to accept the amendment."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"If that is the sense of the Council, I shall be glad to get a minimum of one-half of the members of the District Board if I cannot get two-thirds."

The amendment was then put in the following amended form, and the motion was agreed to:—

'If at a meeting specially called for the purpose, a majority of the members present acting on the advice of the Commissioners, or with the approval of a majority of not less than two-thirds of such members (such meeting to consist of not less than one-half of the total number of the members of the Board) acting against the advice of the Commissioners, adopt the preliminery scheme, they shall revise it in the following manner.'

The Hon'ble BABU SURENDRANATH BANERJEE moved that the following proviso be added to section 14:—

'Provided that it shall always be obligatory on the Local Government to contribute a fixed proportion, to be determined by the Local Government, of the cost incurred in carrying out such scheme.'

He said—"As I read section 14, it is optional with the Government to contribute to the construction of any drainage project or not, just as it pleases. I take it that, having regard to the great interest which the present Lieutenant-Governor has taken in this Bill—and I am sure that it is an interest which will be perpetuated by his successors in office—such contributions will be frequently made, and in the vast majority of cases will be generously made. Therefore I think it would be wise on the part of the Government to recognise this duty as a statutory obligation. It would act as an incentive to the District Boards to initiate such schemes. It would act as a stimulus to generous and philanthropic individuals who would emulate the generosity of the Government. Further, if Government contributes it will take care to see that no bogus schemes are started, and that the money is well-spent. I have heard the remark made that the Government may nullify the provision by contributing very little, but I have abundant confidence in the generosity of the Government in this matter. I hope that under these circumstances the Government will make the concession I ask for, and that it will recognise its duty to make such contributions as a statutory obligation."

The Hon'ble MR. LYALL said:—"I do not wish to take up the time of the Council by saying anything further than that this amendment cannot be accepted by the Government."

The Hon'ble MR. R. C. DUTT said:—"I think this amendment, if it were accepted, would be entirely futile. On the one hand, the Bill confers upon the Government the power of accepting or rejecting a scheme. That being so, if we lay it down, at the same time, that the Government in accepting a scheme shall always contribute a certain proportion of the cost, it may come to this that where the Government is prepared to contribute one-fourth of the cost of a particular scheme which it approves, and the Legislature has fixed the proportion of one-third, the Government may be induced for that reason to reject the scheme. On the other hand, there may be schemes which the Government may consider so important that it may desire to contribute more than the proportion laid down in the Act, and in such cases the amendment would have the effect of restricting the generosity of the Government, which I am sure my hon'ble friend does not intend. I have just now before me a scheme of this nature which has been laid before the Government. It is a scheme for opening out the Kausiki khal in Hooghly. The northern part of the khal is now silted up, and is mostly cultivated to the extent of two or three miles; the rest of the channel is absolutely stagnant, and the water in it is never renewed. There are about fifty villages situated in that area, the whole of which suffer from the effects of malaria, and in recent years they have suffered from cholera also. There were at least two hundred deaths from this disease last year. A scheme was prepared for sending a current of fresh water into this khal from the Kana Nadi, so as to benefit all the villages on its banks, and restore it as a water course. It was proposed to provide a sluice gate at the lower

end by which the water could be let out into the Rajapur Bil; and having thus opened out both ends of the khal, it was proposed to get as much water into it as can be spared from the Kana Nadi, which may be about four or five flushes during the year. It took some time to mature the scheme, and I had the greatest pleasure, as acting Commissioner of Burdwan, to forward it to the Government for favourable consideration. A few months ago I received a reply from the Government, in which they stated that the scheme would be carried out in the Irrigation Department, provided that half the estimated cost of the work was contributed by the District Board. Therefore, if we accept this amendment and fix the proportion to be contributed by the Government, which would probably not be more than one-fourth or one-third, it may have the effect of restricting the contribution to something less than what the Government may otherwise be willing to give."

The Hon'ble BABU SURENDRANATH BANERJEE, said:—"My hon'ble friend MR. R. C. DUTT labours under some misapprehension. According to the terms of my amendment there is to be no hard and fast rule of proportion which is to govern all cases. The proportion of the contribution to be made by Government will vary in each case, and will be determined by the Government itself, having regard to all the circumstances of the case. There will be nothing to prevent the Government from paying one-half of the cost in any case in which it may think fit to do so. All that I want is that the Government should recognize by law that it is bound to make a contribution."

The Hon'ble MR. RISLEY, said:—"In that case I should like to enquire how the proposal, as it has just been explained, differs from that which is already comprised in section 14, which provides that the Local Government shall consider the scheme, and 'if it approve or modify the scheme, it shall thereupon return it so approved or modified to the District Board through the Commissioner of the Division, with an intimation of the amount which the Local Government will contribute towards the scheme.' I conclude that the amount so contributed will bear some proportion to the cost to be incurred in carrying out the scheme."

The Hon'ble BABU SURENDRANATH BANERJEE observed:—"If it is understood that the liability of the Government to contribute is recognised in the Bill I withdraw this amendment."

The Hon'ble SIR GRIFFITH EVANS said:—"I do not think the Government was bound by section 14 to make any contribution. It ordinarily would do so no doubt, but there is no statutory obligation, and I do not see why there should be a statutory obligation."

HIS HONOUR THE PRESIDENT said:—"I think the answer to the hon'ble member's amendment is that it does create a statutory obligation on the Government to contribute to the cost of an approved scheme, which section 14 as it stands in the Bill does not create. But the statutory obligation would be satisfied by the Government contributing a single rupee, and therefore it would have no practical effect. Under these circumstances, perhaps, the hon'ble member will withdraw the amendment."

The amendment was by leave withdrawn.

The Hon'ble BABU SURENDRANATH BANERJEE moved that for sections 23 and 24, the following be substituted:—

'Every holder of an estate or tenure liable to pay the rate under section 22 shall pay to the Collector half the rate due in respect of such estate or tenure, the other half being paid to the Collector, or any other officer who may be appointed in this behalf, by the cultivating raiyats holding lands within the local area, the amount due from holders of estates and tenures and cultivating raiyats being recoverable under the law for the time being in force for the recovery of public demands.'

He said:—"Under the Bill as it is, the whole of the drainage cess will be recovered from the owner of the estate or tenure, and he will have

"On these grounds, I submit that having regard to the importance of the principle involved and of giving every legitimate relief to the landed interest, all that can be done to meet their just grievances in a matter of this kind should be done. In giving my vote in favour of the amendment, I will only add one observation. I do not identify myself with any remarks which have been made in favour of a practical addition to what is now known as the chaukidari tax being accepted as a substitute for the road cess. Having some acquaintance with villages in the mufassal, I am bound to say that in my experience among the poor agricultural classes there is not unfrequently a great deal of hardship in the realisation of that tax, and I should be very reluctant to support this amendment if I thought it would bring about an addition to the chaukidari tax. I was going to say it would be a calamity to add any taxation to what is already borne by those who are living on the smallest of earnings and the scantiest of means. But believing as I do that the District Boards might so work the matter as to deprive the operation of the optional clauses, the alternative schemes of taxation, of any semblance of injustice or hardship to the poor, having their own experience and local feeling to guide them; believing that considerations of strict fairness to all classes should not be altogether lost sight of in searching for smoothness and ease of machinery; and without associating myself with all the details of the amendment—I shall yet vote for it, should it be pressed to a division, as a protest against the laying of fresh burdens on only one class, the raiyat and the landlord, for the conferring of benefits which will be shared by not them alone."

The Hon'ble Mr. RISLEY said:—"I have only two or three words to add to the ample, and I venture to think effective, criticisms which have been passed on this amendment, and those two or three points have not been fully dealt with in the speeches which we have heard so far. In the first place, I understand, we are dealing wholly with a question of mechanism and not with the question of principle. The principle is admitted that a tax upon the land is proposed, and not a tax upon the incomes of the people. The only point is what is the best means of giving effect to that tax. We have the choice of two machineries or perhaps three, one of which, the machinery of the road cess, is unquestionably a good machinery, and it is proposed besides this machinery, which I am inclined to think the best, to give the District Board the use of two alternative kinds of machinery. One of these is the annual value tax which has not been referred to in the debate and which will hardly be possible in any rural area: it has been found impracticable in small municipalities, and it will therefore be quite unworkable in rural areas. Therefore the only alternative which really remains is the tax according to the circumstances and property of the person to be taxed. That tax has a tolerably ancient history. I believe it has existed from the time of the Chaukidari Tax of 1856, and I am not sure that it does not go back to an older Regulation of 1819, which introduced the Chaukidari Tax on a small scale for, I think, the municipalities of Dacca, Berhampore, Calcutta, and Cuttack. The Chaukidari Tax from the very commencement always had a maximum limit, and anybody who examines the matter can satisfy himself that that is the principle upon which the tax is based. In all the discussions, the discussions on the Municipal Bills of 1856 and of 1864 and of later years, it has always been recognised that the tax itself is a sort of rough-and-ready means of taxation, and is only to be accepted as a *pis-aller*, because you cannot put anything else in its place. What made the tax tolerable was this maximum limit, but it is not clear to me from the terms of the amendment whether the hon'ble member proposes to make his alternative scheme subject to a maximum or not. If he proceeds here on the lines of a circumstance and property tax, then practically he is bound to provide some maximum limit. The new Chaukidari Act, VI of 1870, fixes a maximum of one rupee a month. Either the amendment proposes ultimately to take cognizance of this, or it does not. If it does, the principle of proportional benefit which forms the principle of this Bill is clearly thrown out. Under the road cess procedure everybody pays strictly in proportion to the land he holds; but if you proceed on the basis of the Chaukidari Tax, everybody's liability will cease when the maximum limit of one rupee is reached, and then

there will be a substantial difficulty in levying the amount required, and in no case will people pay in proportion to their income or the amount of land they hold. The tax will be absolutely inequitable all through.

"Then there is the second point. It is alleged that the proposal to assess the tax according to circumstances and property is intended to lay the burden on classes who under the Bill would escape from taxation. I submit that it is extremely doubtful whether that statement can be made out. The assumption is that in rural areas there are large numbers of people who have no interests in land, and who will therefore escape a machinery which adjusts the tax according to interest in land. I use the figures prepared in connection with the cadastral survey of Muzaffarpur, which show that in an area of three thousand square miles there is a population of 2,711,000. We may assume half of these to be females; there remains 1,355,000. We may further assume that one-third of these are children. We are then left with a total number of 900,000, and of these no less than 200,000 are proprietors and shareholders in land. The number of tenures is one million. The excess of tenures over population is due to the fact that a certain number of people hold more than one tenure. But even these figures do not exhaust the subject; they make no mention of mortgagees of property and of tenant rights, all of whom, I understand, are to be numbered as having interests in land. So that in this Muzaffarpur area everybody, except the small class of labourers, has some interest in land, and certainly it would not be proposed to assess them. I shall give another instance. It is a statement in connection with a pargana in the Tippera district, from which it appears that no less than 94 per cent. of the population are agriculturists. Further, I find a statement in a very admirable report by Munshi Nandji. It is a statement in connection with pargana Mallarpur in Birbhum, which gives statistics of the population classified according to professions who also hold cultivable lands. They are merchants, oil-pressers, oil-sellers, potters, blacksmiths and coolies. I have no doubt that further statistics which may be prepared in connection with these statements will absolutely demonstrate this point. And further, it is a matter of experience in this country, as in other countries, that the trading classes, directly they have made money, the first thing they do is to acquire rights in land. They take mortgages of rights either as middlemen or as landholders, and it is absolutely beyond doubt that the whole of these people will be assessed under the road-cess machinery and will be rightly so assessed, and therefore there is no necessity for introducing any alternative form of taxation whatever.

The Hon'ble SIR GRIFFITH EVANS said:—"I wish to say a very few words, particularly on the question of the machinery for the assessment of the proposed alternative system of taxation: I should rather say the entire absence of any machinery for this alternative proposal. I am not going to discuss the question whether equitably all property of all kinds should not contribute equally in a proper scheme of taxation for local improvements. That is a question which has been much discussed in England, but the practical difficulties have never been overcome. What we have to do now is to vote on a certain amendment, namely, that District Boards should be able to recommend certain alternative forms of raising this money, and on their making that recommendation the Collector should make certain estimates, and then there follow amendments which purport to indicate the way of carrying out such recommendations. The proposal is simple no doubt to a degree, and the only objection is that it is too simple, and that it provides no machinery at all for working it out. The proposal is to have a tax on persons in the local area according to the circumstances and the property of each person. How is the tax to be levied? My hon'ble friend, MR. ANUNDO MOHUN BOSE, who has backed up the adoption of this amendment, has himself said that it would be perfectly out of the question to utilise the agency for the assessment of the chaukidari tax for the purpose of levying this taxation. Obviously it is so. Then what is the other scheme? It is the machinery employed by mufassal municipalities. It is a most elaborate machinery. It provides that there should be an assessment list as regards the property and the circumstances of individuals, and a valuation list as regards the rateable value of holdings. These assessment and valuation

lists are to be published; there is a machinery for appeals of an elaborate character, and a proviso for a maximum of eighty-four rupees. But these provisions are not incorporated in the Bill or in the amendment, and would not work if they were so incorporated. In the present case, we are simply told that the District Board is to recommend a principle of assessment, and that the Collector is to make out an estimate. It has been pointed out that it will be impossible for the Collector to do so, as he has no agency for the purpose. But suppose he does make an estimate, then by section 24A, if the District Board has decided to raise the cost of carrying out a drainage scheme by means of a tax on persons or on the annual value of holdings within a local area as provided by section 15A, they would require the Collector to assess persons occupying holdings within that local area according to their circumstances and property, or by a rate upon the annual value of holdings within such area, and then the assessment is to be made either through a paid assessor or by means of the village punchayats or through any other agency the Collector may think fit to comply. That section gives no idea of the way in which objections are to be dealt with, on the assessment made, nor does it prescribe a limit or any proportion between the supposed income and the amount to be levied as a tax or provide any means of valuing mufassal holdings or limit the percentage to be paid on the value. It is left entirely for the Collector to do what he pleases. I do not know what is meant by such a section. I assume it to mean that persons are to be assessed at whatever the Collector fixes, and thereupon this tax—I cannot discover when or on what action by the Collector it becomes payable—is to be recoverable as a public demand. It has been said that the Select Committee will be able to find the means of carrying out this principle of taxation. The question before the Council is not to refer the Bill back to the Select Committee and ask them to give effect to certain principles, but whether we should adopt the amendment now before us, which to my mind it is impossible to do with any regard for our reputation as an assembly of practical men."

The Hon'ble MR. BOURDILLON said:—"It appears to me that the general merits and demerits of the proposal before the Council have already been sufficiently discussed, and I have no desire to add another stone to that heap: I only wish to refer to one point which has not been noticed by any of the speakers who have preceded me. The hon'ble mover of the amendment has told us more than once that he bases his amendment upon the broad principle that all who benefit by an improvement under this Bill should be equally taxed. But if I read his amendment rightly, it seems to me to carry its own condemnation with it, and to be so worded as exactly to frustrate the hon'ble member's intention. It proposes that the tax shall be an assessment upon persons occupying holdings, but the bill nowhere defines a 'holding,' and the hon'ble member has omitted to provide any definition of the term. We must therefore turn to some other place for a definition, and as we are talking of rural areas, the natural reference is to the Road Cess Act, which has to a great extent been made the basis of the Bill before the Council. In that Act (section 4) 'holding' means the land held by a cultivating raiyat. If that definition is accepted in default of any other, the practical result would be that the tax will be levied from none but cultivating raiyats within the local area, whereas the intention of the amendment is to levy it from all alike."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"I have a few observations to offer in reply to the remarks which have been made on my amendment. The chief objection is, firstly, one of principle and, secondly, as regards the practical machinery for the purpose of carrying out the objects of the amendment. It has been observed by more than one speaker that my proposals involve a rough kind of income-tax. It is undoubtedly a rough kind of income-tax that I propose, but that ought to be no objection to them. It is somewhat late in the day to urge any objection of that kind, having regard to the fact that the bulk of the taxation in the mufassal is a rough kind of income-tax. The chaukidari tax, the tax levied in a large number of mufassal municipalities, are all so many forms of income-tax. Not only that, but it seems to me that by accepting this kind of taxation you move

along the line of least resistance. As the hon'ble MR. RISLEY has remarked, the people of Bengal have been accustomed to the chaukidari tax since the year 1819, and to the municipal tax according to the circumstances and property for a long time; therefore they are familiar with this tax, and those who have to levy it are also familiar with it. Consequently, as far as the question of principle is concerned, my scheme is not open to any objection, as it enables us to move along lines to which the people have long been accustomed. But we have been treated by the learned Advocate-General to a criticism upon the defects of the machinery for the imposition and realization of the tax. It strikes me that if the Government accepts this amendment, there ought to be no real difficulty in the way of framing a suitable machinery for the purpose of carrying it out. It is provided in section 24A, which I propose to move as an amendment later on. The tax may be assessed and collected either by the income-tax assessor or by any other assessor the Collector may appoint, or by means of any other agency the Collector may consider desirable. Then under Chapter II the Government is vested with the power to frame rules generally for carrying out the provisions of this Act. Surely, if the principle of the amendment is accepted, there ought to be no difficulty in the way of framing rules to give effect to it. I take my stand on the high ground of principle. You are going to enact a law which is admitted to be unpopular; why handicap it with a system of taxation which is likely to cause a great deal of dissatisfaction? The zamindars will complain, the raiyats will complain. They will say, here is a benefit to be shared by the community at large, but why should we alone be taxed for it? I do not think the Government should face difficulties of that kind when my amendment provides a means of escape. I propose alternative schemes, and if some of them are found impracticable, the District Boards will not accept them. Why do you object to them? The mere fact of their being on the statute-book will testify to the anxiety of the Government to avoid an unfair and inequitable system of taxation. I have not the slightest doubt in my mind that by accepting these alternative systems of taxation the Government will have taken a very long step towards conciliating public opinion."

HIS HONOUR THE PRESIDENT said:—"I had hoped that the hon'ble mover of the amendment in winding up the debate would have told us that while still unconvinced as to the principle involved, he was prepared to withdraw his amendment in view of the fact that the majority of the Council is decidedly against it, and that a blow has been struck at his armour which has made serious dents in it, and which, to a great extent, destroys the effective power of that armour. I should like in the first place to say that though the hon'ble member, in proposing his amendment, began with expressing a fear lest that he should be considered obstructive, neither I myself, nor I think any officer attached to the Government, is inclined to think that the hon'ble member has been obstructive in the way in which he has treated this Bill, either in the Council or in the Select Committee. On the contrary, I wish to say that we owe a great deal to him in respect of the origin of this Bill, of the improvements which have been made in it during its incubation, and of the way it has been received by the country at large. And though I cannot accept this amendment, I am not the less grateful and glad to acknowledge the great help the hon'ble member has rendered in preparing the Bill and supporting its main principles.

"As regards this amendment, I admit that the object is wholly laudable. From the beginning we have sought for some other way of imposing a rate than on landed interests only, and if we could have found a way of taxing people who will benefit by these drainage schemes, and who do not come within the scope of the rate which has been adopted, how we would have been glad to accept it. We have searched high and low, but we have not been able to find it. I think that the object of the amendment is a right and a sound one, and if it had been a practicable measure, I would accept it with great satisfaction. But the main difficulty in our way from the time when the first draft of this Bill was brought out is the practical difficulty of the introduction of a new system of taxation; how we should assess, how we should value, how we should bring notices home to the people, how we should treat

to recover half the amount from the cultivating raiyat. The object of my amendment is to make each person responsible for his own dues. The zamindar will pay his share of the cess, and will not be held responsible for the dues of the cultivating raiyats which he is not always able to realise, and at the same time the raiyat will be protected against the exactions of an unscrupulous zamindar, who may take more than he is entitled to do. This is the principle which has been adopted in the most recent enactment which has been passed by this Council. Sections 30 and 31 of the Record of Rights Act, provide as follows:—

Payment of expenses by proprietors.

'30. The amount due from proprietors shall be paid together with such instalment of land revenue as the Local Government may direct, and arrears shall be recoverable under the law for the time being in force for the recovery of public demands.

Payment of expenses by tenants and rent-free owners and occupiers.

'31. The amount due from tenants and rent-free owners and occupiers shall, subject to any orders passed by the Local Government under section 28, be paid by them to the Settlement Officer, on tender of such extract from the record of rights as they may be entitled to receive. Arrears shall be recoverable under the law for the time being in force for the recovery of public demands.'

"This is what we have done in connection with the most recent piece of legislation which has passed through this Council, and I beg that the same principle may be adopted in this Bill. It is a new law which we are enacting, and it will be an unpopular law, and it strikes me that zamindars and raiyats will be partly conciliated if the principle for which I contend is accepted. The British Indian Association have made a representation on this point; they complain of the principle contained in this section, and they have recorded a strong protest against it."

The Hon'ble MR. LYALL said:—"I am compelled to ask the Council to reject this amendment. The hon'ble member says it is on the lines of the latest legislation, but the latest legislation has nothing to do with the subject before us now. The object of the Select Committee was that the rate should be collected in the easiest way by the existing machinery of the road cess, but the hon'ble member wants us to create an entirely new machinery in the Collector's office to realise the rate from all cultivating raiyats. That would be an expensive machinery, and I venture to doubt whether the raiyats would prefer it. I do not think they would object so much to pay an anna or so more than their existing road cess as to a number of peons being let loose with certificates all over the country for the collection of these petty sums. The sums realisable under this Act will be exceedingly small, and a large number of peons with certificates in their hands would have to be sent out for the collection of very small amounts. I venture to think that the poor raiyats would have to pay a great deal more under the proposal of the hon'ble member than under the procedure prescribed by the Select Committee. I cannot therefore recommend the Council to accept this amendment."

The Hon'ble MR. Anundo Mohun BOSE, said:—"While sympathising to a great extent with the object which the hon'ble member for the Corporation has in view, I will point out that this amendment can hardly be placed before the Council, or considered by it, until section 22 of the Bill is amended. That section provides that 'the rate so determined shall be published as provided in section 40, Bengal Act IX of 1880, and shall be paid together with the road cess payable by those liable to pay such cess;' therefore that section lays it down that the whole of the rate under this Bill shall be paid in the first instance by the persons who are liable to pay the road cess. If we leave that section intact, and my hon'ble friend does not propose to alter it, it will not be possible to accept this amendment."

The Hon'ble BABU ESHAN CHUNDER MITTRA said:—"I do not know whether the proposal of the hon'ble member would be advantageous in any way. I think it would be more convenient if the zamindars and tenure-holders were called upon to pay the rate and realise their quota from the raiyats."

The Hon'ble BABU SURENDRANATH BANERJEE asked leave to withdraw the amendment.

HIS HONOUR THE PRESIDENT said:—"Before allowing the amendment to be withdrawn, I desire to explain the reason why an important distinction exists between the case before us now and the case to which the hon'ble mover of the amendment referred in the Record of Rights Act. It has rather a curious history. When Sir Antony MacDonnell was acting for me, the question came before him first of all, and he contemplated that their share of the cost of the settlement operations should be paid by the raiyats, not once for all, but through a number of successive years, and he therefore thought the cost should be collected in the way in which the road cess is collected; but when I came to consider the matter, I found that the amount would be so small that it would be better not to collect it, by instalments, with the road cess, which might give the impression that it was to be more or less a permanent imposition, but to collect it once for all from the raiyats. If you want to collect a due once for all, you should collect it directly from the person from whom it is due, but if you are going to collect an amount year after year by all means collect it by a machinery which exists for the collection of an annual rate or cess."

The motion was by leave withdrawn.

The Hon'ble BABU SURENDRANATH BANERJEE moved that the following proviso be added to section 22 :—

'Provided that if the Collector or other officer shall so direct, a notice under this Act may be sent by post in a letter addressed to the person named therein at his last known residence, address, or place of business, and registered under Part III of the Indian Post Office Act of 1866, or any similar enactment for the time being in force, and service of it may be proved by the production of the addressee's receipt.'

He said—"Section 40 of the Road Cess Act does not make any provision for personal service by post. In the Bill as revised by the first Select Committee we had a section precisely the same as that which I now propose. It was a proviso to section 34 of that Bill, and it laid down that if the Collector or other officer should so direct, a notice should be sent by post in a registered cover. The proviso which I now submit for the acceptance of the Council does not impose any duty on the Collector, except such as he may take upon himself in the exercise of his discretion. It is entirely a matter of discretion whether he should serve a personal notice of this description, and I do not see any possible objection to the acceptance of a proviso like this. There may be cases of hardship in which the Collector may be convinced that service of personal notice is necessary. What possible objection can there be to his serving personal notice in such cases? It is not an obligation imposed upon the Collector, but we give him a discretion, and he may be trusted to use his discretion in a manner which will not encumber him with unnecessary work."

The Hon'ble MR. LYALL said:—"There is no possible objection to this amendment, except that it already exists in the law, and to insert this proviso would be to enact the same provision twice. Section 22 of the Bill provides for the service of notice in the manner provided by section 40 of Bengal Act IX of 1880, and in section 96, clause (2) of that Act, it is enacted that the notice may be served 'by sending a registered letter containing such notice directed to the said person at his usual place of abode or to the place where he may be known to reside,' and that makes exactly the same provision which the hon'ble member desires. The provision exists in the law, and is therefore unnecessary."

The Hon'ble MR. R. C. DUTT said:—"The reason why this provision occurred in the Bill as before amended by the Select Committee was that it was then intended to realise this cess as a separate tax. It is now provided in section 24 that it is to be levied with the road cess, and it will be a rate proportionate to the road cess. The provisions of the Road Cess Act have therefore been

made applicable to the recovery of sums due under this Act. Practically what the hon'ble mover of the amendment wants is provided for."

The amendment was by leave withdrawn.

The Hon'ble MR. LYALL moved that the following clause be substituted for clause (2) of section 35 :—

(2) "The Local Government shall, before making, altering or repealing rules under this section, publish a draft of the proposed rules, alterations and repeals in three consecutive numbers of the *Calcutta Gazette*, and shall specify a date not less than one month from the date of publication at or after which such draft will be taken into consideration.

(3) The Local Government shall receive and consider any objection or suggestion which may be made by any person with respect to such draft before the date so specified.

(4) Every rule so made or altered and every repeal of any such rule under this section shall be thereafter published in the *Calcutta Gazette*."

He said:—"This clause has been redrafted by the Secretary. It is more full than the clause which the Select Committee drafted, and it is in accordance with the procedure prescribed by the General Clauses Act."

HIS HONOUR THE PRESIDENT said:—"As this amendment is upon a question of wording, and has not been considered as carefully as is desirable, it will perhaps be better to defer the consideration of it to the next meeting of the Council. Although we have disposed of all the amendments proposed to this Bill, I shall recommend to the Council that we should not pass the Bill on this occasion, but should defer it to the last meeting of the Council, which will probably be held on this day fortnight. It often happens in regard to Bills of this kind that suggestions are made at a later date, corrections and improvements are proposed, and it is always well to have a *locus penitentiæ* in a matter of this kind. Another reason for deferring the final passing of the Bill is that we leave an opportunity for two mufassal members of the Council who have not yet been elected to give us the benefit of their experience in the matter. There have been delays in the election of the representative members of the Bhagalpur and Dacca Divisions, but we hope by this day fortnight to see those members among us; therefore I propose that the final passing of this Bill be deferred till the last meeting of the Council."

THE CALCUTTA ELECTRIC LIGHTING BILL.

The Hon'ble MR. COTTON presented the Report of the Select Committee on the Bill to facilitate and regulate the supply of electricity for lighting and other purposes in Calcutta.

The Council adjourned to Saturday, the 27th July 1895.

CALCUTTA;
The 6th August, 1895.

C. E. GREY,
Offg. Assistant Secretary to the Govt. of Bengal,
Legislative Department.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 and 1892.

The Council met at the Council Chamber on Saturday, the 27th July, 1895.

Present:

The Hon'ble Sir Charles Alfred Elliott, K.C.S.I., Lieutenant-Governor of Bengal, *presiding*.
The Hon'ble H. J. S. Cotton, C.S.I.
The Hon'ble D. R. Lyall, C.S.I.
The Hon'ble J. A. Bourdillon.
The Hon'ble C. E. Buckland, C.I.E.
The Hon'ble H. H. Risley, C.I.E.
The Hon'ble R. C. Dutt, C.I.E.
The Hon'ble Rai Durga Gati Banerjea Bahadur, C.I.E.
The Hon'ble Surendranath Banerjee.
The Hon'ble Maharaja Jagadindra Nath Roy of Nator.
The Hon'ble Maulvi Muhammad Yusuf Khan Bahadur.
The Hon'ble C. E. Smyth.
The Hon'ble A. M. Bose.
The Hon'ble Rai Eshan Chunder Mittra Bahadur.

THE OFFICIAL SECRETS' ACT.

The Hon'ble Babu Surendranath Banerjee asked—

Is there any truth in the statement which has appeared in the *Indian Daily News* that a new set of rules in connection with the Official Secrets' Act is under the consideration of Government; if so, will the Government publish the rules in the Official Gazette before final adoption, so as to enable the Press to discuss them?

The Hon'ble Mr. Cotton replied:—

"No rules under the Official Secrets Act have been framed by Government, and the Lieutenant-Governor is not aware that the preparation of any set of rules in connection with that Act is under contemplation."

THE MONGHYR ELECTION.

The Hon'ble Babu Surendranath Banerjee asked—

Is it true as stated in the newspapers that Mr. Phillips, Magistrate of Monghyr, before he went on leave sent a circular to all the members of the District Board, in which he discussed the merits of the various candidates for election to the Bengal Council, and suggested that members should vote for Mr. Hennessy? Is it the case that the Maharaja of Sonbarsa has drawn the attention of Government to this circular, and has petitioned for the avoidance of the Monghyr election on the ground of the use of official pressure? Is it the case that Mr. Stack, the Inspector of Schools for Bihar, wrote to the Sub-Inspector of Schools at Monghyr, who is a member of the District Board, requesting him to vote for Mr. Hennessy; and is it the case that two new members of the District Board, both Europeans, were appointed by telegram, so as to be in time, to vote for the first election?

Does the Government approve of these proceedings; if not, will the overnment be pleased to state what action it proposes to take in this connec-on ?

The Hon'ble MR. COTTON replied:—

"The answer to the first two parts of the Hon'ble Member's question is in e affirmative, except that Mr. Phillips did not recommend that the members of e Monghyr Board should vote for any one candidate: he suggested two names those of persons who had in his opinion preferential claims on the support of the District Board, viz., those of Mr. Hennessy and Rai Dhiraj Karan Bahadur. Mr. Phillips explains that he recorded his note because several members of the Board had asked him for his views and wishes. He probably thought that as he was leaving the district his advice was sought rather as an experienced friend than as an official, but still his conduct was indiscreet and opposed to the principle laid down by Government for the guidance of its servants.

"The Lieutenant-Governor does not think it necessary to make any enquiry as to whether Mr. Stack, the Inspector of Schools, Patna Circle, wrote to a Sub-Inspector of Schools requesting him to vote for any particular candidate, but he considers that any such letter, if written, would have been an indiscretion.

"It is the case that the appointment of two European members of the Monghyr District Board, which had been unduly delayed by slackness in the local offices and in the Secretariat, was made by a telegram, so as to enable them to vote at the elections. It was thought desirable that the Board should be of its full strength on so important occasion."

THE CALCUTTA ELECTRIC LIGHTING BILL.

THE HON'BLE MR. COTTON moved that the report of the Select Committee on the Bill to facilitate and regulate the supply of electricity for lighting and other purposes in Calcutta be taken into consideration in order to the settlement of the clauses of the Bill, and that the clauses of the Bill be considered in the form recommended by the Select Committee.

He said:—"I propose, with Your Honour's permission, to trouble the Council with an explanation of some of the more important changes introduced by the Select Committee in the drafting of this Bill. In section 3, which relates to the granting of licenses, it will be observed that a clause has been added declaring that the grant of a license to supply electricity within any local area shall not in any way hinder or restrict the grant of a license to any other person or company within the same area. This clause has been taken from the English amending Act of 1888. It was introduced in England after full discussion and consideration of the question whether an undertaker within any particular area should be allowed an absolute monopoly or not. There was nothing in the law of 1882 which authorised a monopoly; nothing was said on the subject, and it was entirely in the discretion of the Board of Trade to grant a second order or a second license in any particular area or not. So far, therefore, the amending Act of 1888 did not affect the procedure which the Board of Trade was competent to follow. But it was thought advisable when the law was under reconsideration to lay it down specifically, that a monopoly was not contemplated by the law. As I understand it one of the main reasons for such a provision was that the roads, streets, thoroughfares, &c., may not be unnecessarily interfered with. If two rival undertakers were to work at the same time, there would be a double set of operations, and the public would be subjected to unnecessary inconvenience. This I believe to be the main reason why local authorities in England have been in favour of monopolies, and in practice the Board of Trade has not allowed two companies to work together in one area. Special cases may arise in which it is desirable that a second license should be granted, and to meet such cases the law was modified in England in 1888, and we have thought it desirable to follow the example of the Legislature in England and to introduce a similar clause in the Bill now before you.

"Section 4 of the Bill relates to the making of rules. If you examine this section, you will see that the rules to which it relates apply exclusively to rules

regarding applications for licenses; they have no reference to the general public any further than this, that any member of the general public may of course become an applicant for a license. They apply specifically to any intending undertaker, laying down the exact form in which an application for a license should be made, and provide for any enquiries and so on in connection with the grant of such licenses. We have provided that any proposed rules made under this section or any modifications or repeal of such rules should be published in the *Calcutta Gazette;* and should not be taken into consideration by the Local Government until after the expiration of two months from the date of the original notification. It is thought that the period of two months is ample time to allow any person who is interested in the subject of the rules to take objection or to make suggestions with regard to such rules. I propose, with Your Honour's permission, to introduce a mere verbal modification which will clear up a point which is at present somewhat obscure in the wording of this section.

"Section 5 relates to the conditions to be inserted in the license. As I have said before this is the most important section in the whole law, and it is the conditions inserted in the license which will really control the working of this law when it is passed. We have added to those conditions a proviso taken from the English Act in order to afford greater security to the safety of the public. Among the conditions to be introduced, there is a clause (*a*) which relates to the safety of the public from personal injury or from fire or otherwise. The Board of Trade have found some practical inconvenience in inserting provisions under that clause which will meet cases as they arise, and it has been declared by the law in England that the Board of Trade shall have power to enact regulations for the same object,—that is the object of securing the safety of the public—which when passed should have the same force and validity as though they had been inserted in the license, and those regulations may be modified from time to time. Experience has shown that this elastic arrangement is better than the insertion of any definite conditions on the subject in the license itself. We have followed the English procedure exactly in this respect, and under this proviso, if carried, it will be competent to the Local Government to enforce such regulations as they deem expedient for ensuring the safety of the public from personal injury or from fire or otherwise, and such regulations when passed shall bind the undertakers exactly in the same way as though they had been inserted as conditions in the license. Such regulations will not affect the general public any more than the conditions in licenses. They will affect undertakers only.

"Under section 16 we have agreed unanimously to omit the proviso which was suggested for our consideration by the Trades Association, and which declares that no lamps or electrical fittings shall be added without due notice given to the undertakers. This section 16, as I have already stated to the Council, gives effect to one of the main principles of the Bill, namely, that undertakers are authorised to supply electricity, or, as explained in the licenses or provisional orders granted under the Act, to supply electrical energy. That is the term used throughout the provisional order or license; and although this electrical energy is in the vast majority of cases devoted to the purpose of lighting, it is not intended by this Act, any more than by the corresponding English Act, that it should be devoted to lighting only. Section 16, which is reproduced from the English law, lays down that the undertakers shall not be entitled to lay down any special form of lamp or burner to be used by any company or person, or in any way to control or interfere with the manner in which electricity supplied by them under this Act, or by reason of any license, shall be used. The first proviso to that section was inserted on the recommendation of experts in England when the law was under consideration. Sir Frederic Bramwell and Dr. Siemens, probably the most competent authorities on the subject, gave it as their opinion that some restrictions should be imposed on consumers to prevent the misuse of electricity. I have perused their evidence, and find that they were unable to define the character of the misuse to which they thought electricity might be subjected. But they gave an illustration, the object being to prevent injury by any action reacting unfavourably upon the source of supply. The illustration they gave was this. If a

person were to use the gas supplied to him by turning it on and off 100 times in a minute, it would produce vibrations in the supply pipe which would be very objectionable. In the same way if a man was constantly trying reckless experiments with his electric lighting, he would endanger the supply to other consumers; his action might even endanger life and would tend to vilify the undertakers and their undertaking. And so in the model provisional order there is a special proviso which authorises undertakers to refuse to supply electric energy, unless they are reasonably satisfied that it will not be misused, and if it is misused to cut off the supply. The further proviso to this section of the law which the Select Committee decided unanimously to omit imposed further restrictions which the English law did not contemplate and which we deemed it unnecessary to impose in India.

"Section 27 of the Bill before you has been redrafted by the Select Committee, but as the language of the draft appears to admit of improvement, I propose, with Your Honour's permission, to suggest a revised form of this section which should take the place of that now before the Council.

"Only one point I think remains, and that is that the Select Committee thought it desirable that power should be given to the Local Government by notification in the Gazette to extend the provisions of this Act to any municipality. As now drafted the Bill applies to Calcutta, but power is taken in the last section to extend it to any municipality, including Howrah and any other large municipality, where the demand for electric lighting may arise and where the Government may deem it expedient to extend the provisions of this Bill. We have an example in this matter in the Hackney Carriage Act, which was originally brought in for the town and suburbs of Calcutta alone, but which has in a large number of cases been extended to other places by the special authority given to the Local Government by the Act."

The Hon'ble MR. SMYTH said:—"I have only a very few words to say regarding this Bill; but I think it will be satisfactory to the hon'ble mover of the measure for me to say that the interests I represent in this Council cordially approve of the introduction of this Bill, and I congratulate my hon'ble friend for having initiated a measure which will be welcome as supplying a long-felt want.

"The development of electric science in its application to the practical needs of human life may be considered to date from the time of Faraday, whose career ended about the middle of the present century. In the past 40 years or so this science has advanced by leaps and bounds unequalled by any other knowledge since the commencement of the world's history. In 1880 the future of domestic electric lighting was secured by the introduction of the incandescent lamp. In 1882 the London Electric Lighting Bill was passed.

"And though the advances during the past 13 years have been great, still we know that greater achievements are in store for the present and for coming generations, as experience teaches us that the knowledge of to-day is as nothing compared with that of to-morrow. One can only then wonder that Calcutta—which prides herself on being in the front rank of cities of the world as regards importance,—has been so long without this improved light, more especially as she enjoys undisputed and unenvied the honour of being one of the hottest cities of the world.

"The introduction then of artificial light should be a boon to her citizens who have now to be content with the heat generating properties of gas and oil:—The reason why Calcutta has not followed the lead of nearly all the important cities of Europe in this matter is to my mind not far to seek. The absence of any law on the subject has been a bar to enterprise. Now that this Council is about to needfully legislate, I have little hesitation in saying that a stimulus to electric lighting will be given, and I fully believe and expect capital will not be wanting, and schemes will be put forward for supplying electricity over many of the most important areas of the town.

"With regard to the Bill itself I venture to consider it a fair and workable measure; for the Select Committee, while on the one hand being careful to guard the public interests have, on the other hand endeavoured to avoid making stringent regulations that will act as a deterrent to intending suppliers of electricity, and so defeat the intention of the Bill. I would now as briefly as

possible draw your attention to some of the more important clauses of the Bill before you which have had the attention of the Select Committee. I would, in the first place, particularly draw your attention to the title of the Bill. It is a Bill to facilitate and regulate the supply of electricity for lighting and other purposes. This follows exactly the wording of the English Act of 1882. What I wish to emphasize is that the Bill is not being initiated for the sole purpose of electric lighting only, but it is to facilitate and regulate the supply of electricity for other purposes as well. I may here say that the Bill would not have been half so welcome had it been a Bill to facilitate and regulate the supply of electricity for lighting only.

"It does not lie within my province to say what those other purposes may be, but the uses of electricity are boundless, limited only by the want of intelligence in producing fitting apparatus for its application. The demand for such apparatus is limited only by the want of intelligence on the part of the public to know how to use it properly.

"So rapid, indeed, has been the development of the electric industry that few have been able to keep trace of its achievements, and fewer still have sounded its possibilities for the purpose of giving direction to its growth.

"Electric power has produced, and will still produce, more changes in the mechanical servants and conveniences of civilized life than have ever been caused by the use of any other method or force which has been subjected to the service of man.

"In section 3, sub-section (2), you will notice the license shall be for any period not exceeding 21 years. In the original draft of the Bill this period of time was limited to seven years, but the Bengal Chamber of Commerce in their report on the Bill pointed out that the installation of the electric light on a large scale was a most costly undertaking, and that 21 years was the least period of time adequate to secure to the undertakers a reasonable return on their investment, and this suggestion was, I am glad to say, at once accepted as reasonable by my hon'ble friend MR. COTTON.

"You will notice in section 3, sub-section (5), that the grant of a license to supply electricity within any area shall not hinder the granting of a license to any other undertaker within the same area. This point was duly considered by the Select Committee, and though at first sight it appears to press somewhat hardly on the holder of the first license, still the Select Committee in following the English Act thought it might be a useful clause in the case of unsatisfactory undertakers.

"Section 24, sub-section (2)—Any difference which arises between the telegraph authority and the undertakers or their agents, &c.

"The attention of the hon'ble mover was drawn to this, and it was pointed out that it conflicted with the very proper provision for arbitration in sections 15 and 16. The Bengal Chamber of Commerce thought a good deal of dissatisfaction would or might be caused by vesting such power in the Local Government; and they could see no reason why a dispute between undertakers or their agents, and a Department, should be absolutely left for disposal to the Local Government, and the Chamber suggested the section should be brought into conformity with sections 15 and 16.

"The hon'ble mover met this line of argument by saying, the section was worded in conformity with the wishes of the Government of India who in their letter of the 12th of March last wrote:—

"'That they considered it would weaken the safeguards of the Imperial Telegraph system, if questions affecting the safety of that system were left to be determined by arbitration.'

"In conclusion, I would merely say, as the hon'ble mover said when introducing the measure, that this Bill after all is only the 'dry bones,' the license (which is to be granted to those who we trust will come forward to supply electricity for lighting and other purposes) is the real 'flesh and blood.'

"The object then of the Select Committee has been to prepare the 'dry bones,' in the best possible manner for the application of the 'flesh and blood,' in the shape of the license.

"This license, you are aware, is entirely an executive measure with which we have nothing to do; but I would merely point out that in my opinion the

success of the scheme depends as much upon the wording of the license as upon the drafting of this Bill."

The Hon'ble MR. A. M. BOSE said:—"I have one observation to make in connection with a point arising out of section 12. Section 6 lays down that the undertakers under superintendence may open and break up streets, railways, tramways, and bridges, and also the sewers, drains, or tunnels within or under such streets, railways, tramways, and bridges. Then section 12 requires, except in certain cases, the consent of the local authority, company, or person by whom such street, railway, or tramway is repairable before these can be broken up. But in that section there is no reference to bridges, sewers, &c. That is to say, under the provision as it now stands the consent of the local authority is necessary to break up streets, railways, and tramways, but to break up bridges, &c., which is even a more serious operation than opening up streets, such consent is not necessary. I shall be glad to learn whether the matter has been considered by the Select Committee, and whether there is any special reason for which consent is rendered unnecessary in the case of bridges. If there is no special reason, I hope the hon'ble member in charge of the Bill will take the matter into consideration and introduce a provision in section 12 by which breaking up of bridges, &c., will be subject to the same limitations and safeguards as the opening up of streets, railways, and tramways."

HIS HONOUR THE PRESIDENT said:—"The remarks made by the hon'ble gentleman are hardly applicable to the question before the House at the present moment. He refers to imperfections in a particular section, but he does not himself bring forward an amendment. It would have been more convenient if the hon'ble member had considered the subject in proper time and had drafted an amendment to meet the difficulty which occurred to him. The subject will not, however, be lost sight of, and I shall ask my hon'ble friend, the Chief Secretary, in charge of the Bill to refer to this matter before the House is closed."

The motion was put and agreed to.

The Hon'ble MR. COTTON said:—With the permission of the PRESIDENT, I will move a verbal amendment in section 4, sub-section (2), clause (*a*). It is enacted by that clause that the Local Government shall, before making, altering, or repealing rules under this section, publish a draft of the proposed rules, alterations, and repeals. The expression "draft of the proposed rules and alterations" is no doubt appropriate, but the publication of a draft repeal is ambiguous. In order to remove that ambiguity I move that before the word "repeals" the words "a notification of any proposed" be inserted. Clause (*a*) will then run thus:—"Publish a draft of the proposed rules and alterations and a notification of any proposed repeals in the *Calcutta Gazette*." Similarly, I move that in clause (*b*) of the same sub-section the words "or notification" be inserted after the words "such draft."

The motion was put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE moved that in section 13 for the words "Local Government" the words "Local Authority" be substituted. He said:—"Section 13 provides that the undertakers may construct electric lines above ground, subject to the sanction of the Local Government. I desire to relieve the Government of any responsibility in this matter. It is a responsibility which it seems to me will be more efficiently discharged by the local authorities, who will be more conversant with local affairs than the Local Government can be. My amendment imports the substance of the English Act. Under the English Act the Board of Trade issues licenses; the local authority gives the sanction contemplated under this section. There seems no reason why we should make a departure from the English law in this respect. If it could be shown that any local authority vested with jurisdiction had misused the powers entrusted to them, then some ground would exist for taking away this power from them and vesting it in the Local Government. On the contrary, facts point to an exactly opposite conclusion. There is nothing at present to prevent the Calcutta Municipality from giving sanction for

overhead wires along the Harrison Road. Several times proposals to that effect were put forward, and on every occasion the Corporation resisted the application. Therefore there seems to me no ground for a modification of the English Statute. In moving this amendment, I am supported by the high authority of the Chamber of Commerce. They say as regards section 12, which is section 13 now, that under the English Act the Board of Trade gives licenses, but the local authority has the power to authorise above-ground works. This is what they say :—

'As regards section 12, they note that in the English Act the Board of Trade gives the license, but that the "local authority" has the power to authorise restrictions as to above-ground works. By section 12 of the Bill, the Local Government is invested with this power, as with the power under section 3 to grant a license. The Committee think it would be more in accordance with the spirit of the English Act, and conduce in a larger degree to efficiency of working, if under section 12, instead of "Local Government," "Local Authority" was substituted.'

"I hope my hon'ble friend the member in charge of the Bill will see his way to accept the amendment I have the honour to propose. I pressed this amendment in Select Committee, and as I think there is an important principle at stake, I hope the hon'ble member will see his way to give effect to the popular feeling in regard to this matter."

The Hon'ble MR. COTTON said:—"I am afraid I must oppose this proposal. I am not aware that there is any popular feeling in respect of the matter; but as far as popular feeling has expressed itself, it is opposed to any overhanging wires at all. The Bengal National Chamber of Commerce said that the only criticism they had to offer was that overhanging wires should be absolutely prohibited. But be that as it may, the question of overhead wires was, as I explained in some detail when I introduced this Bill, a very difficult and technical matter, a matter which has given rise to more dispute and friction probably than any other section of the law has in England. The risks are no doubt very considerable; they may or may not be exaggerated, but they are certainly very considerable. On the other hand, the difficulties to be contended against in laying underground lines in a soil as damp as that of Calcutta may or may not be serious; so that there is a good deal to be said on both sides. The question is one of great importance to the public and to electric lighting in Calcutta. It was decided by the Government that the power of decision should be taken away from the hands of the local authority who have no experience in matters of this nature, and that it should rest in the hands of the Local Government who would not be influenced by any personal interest, and would always be guided by the advice of experts. This is a provision of the Bill which I cannot advise the Council to modify."

The Hon'ble MAULVI MUHAMMAD YUSUF said:—"I am unable to support the amendment, and I think it will be much better to allow the section to remain as it is. In regard to the matters contemplated by the section in question, there is no reason to suppose that the result of the deliberations of the Calcutta Corporation will inspire the public with greater confidence.

The Hon'ble BABU SURENDRANATH BANERJEE said in reply:—"I must say I have not been convinced by the arguments which have been adduced against my amendment. I am not prepared to admit that in a purely local matter affecting local interests the deliberations of the Local Government, who have so many interests to attend to, will inspire greater confidence than the deliberations of a local body, the scope of whose jurisdiction is far more restricted. It is said that local authorities have no experience in these matters. That is perfectly true, but when you entrust them with authority in respect of any matter, is it not likely that they will gain experience? When called upon to exercise their authority in such matters they will consult experts, and that is precisely what the Corporation did in regard to the system of electric lighting in Harrison Road. In the next place it is insinuated that popular feeling, if there is any, is opposed to overhead wires. We do not say whether there are to be overhead wires or not. The whole question, if my amendment be accepted, will be left to the decision of the local authority; they will decide whether in any particular area there should or should not be overhead wires;

and it seems to me that this being a purely local question, it ought to be left to the decision of the local authority. It may be that they have not experience, but in regard to many matters entrusted to them, have they not in the first instance to gather information and experience? What experience had the Calcutta Corporation about gas, when they entered into a contract with the Oriental Gas Company? But they gained experience in time. No case, not the shadow of a justification, has been made out to authorize a deviation from the provisions of the English law in this respect. In the preparation of this Bill we have carefully followed the English Statute, and we can have no better guide; the English Statute entrusts this jurisdiction to the local authority, and why should we not follow the English Statute?"

His Honour the President said:—"I am bound to say that the Government holds a very decided view on this subject, and calls upon those who share that view and who are influenced by their arguments to oppose the amendment now brought forward. In the first draft of the Bill which was drafted under my original orders, and which contained a provision equivalent to that which the hon'ble member desires to see reintroduced, we followed the English Act completely. The Government of India, however, drew our attention to the great importance of avoiding the danger to life which might ensue from a a mistaken procedure and the serious interests that are involved. I sympathise entirely with the Hon'ble Babu Surendranath Banerjee in his picture of the Calcutta Corporation yearning to acquire more knowledge on every possible subject, and their desire to 'follow knowledge like a sinking star beyond the farthest bounds of human thought.' I would only ask the hon'ble member and those acting with him to restrain that desire when it involves or might involve the lives of his fellow creatures. The experience of England and of continental countries has shown the extreme danger of overhead wires, and it would be very disastrous if the Corporation of Calcutta were not to accept the experience of Europe, but should wish to acquire that knowledge and experience at the expense, possibly, of the lives of the some of the hon'ble members whom I see around me. Whatever we may think of the Calcutta Corporation, which is by far the most enlightened body we have to deal with, I would remind you that it is proposed to extend the Bill to any municipality throughout Bengal, and it may certainly be said, without derogation to the Municipal Commissioners of many of those places, that we should be very sorry to put the chance of mortal injury to ourselves or to our friends in their hands, even though we have so much confidence in the Corporation of Calcutta that we are prepared to accept that risk as far as they are concerned. I must therefore express the hope that the Council will not accept this amendment."

The motion was put and negatived.

The Hon'ble Babu Surendranath Banerjee moved that the following proviso be added to section 14:—

"Provided that when a local authority considers it necessary to alter the position of any street or of the underground pipes and drains and other works, or to put down new pipes, drains, or other works, such local authority may require the undertakers to shift their electric lines at the expense of the undertakers."

He said:—"I move this amendment at the suggestion of the Chairman of the Corporation. In a letter, dated 18th June, 1895, addressed to the hon'ble member in charge of the Bill, Mr. Ritchie suggested the proposal which is embodied in the amendment I have the honour to move. The amendment embodies the relations which exist at the present moment between the Corporation and the Oriental Gas Company. When they shift their pipes at the instance of the Corporation owing to a change in the position of any street, pipe, or drain, they do so at their own cost, and I have just received a letter from the Manager of the Gas Company to say that although it is not a legal obligation upon them to shift their pipes in such cases at their own cost, they do so willingly, and practically they have charged nothing for it for a number of years. It seems to me that undertakers under this Bill ought to make a concession of this kind to a public body and for the public benefit as a return for the concessions which they receive from it; under the circumstances, I hope the hon'ble member will accept my amendment."

The Hon'ble MR. COTTON said:—"I am afraid the hon'ble member has not read section 14 of the Bill, to which he proposes to add this proviso, with the attention it deserves. The proviso, if carried out, would have the effect of repealing one half of section 14 of the Bill as it stands. Now section 14 is an exact reproduction of the English law on the subject. The section is a little intricate perhaps, but I think I shall be able to make its meaning clear. It empowers the undertakers to alter the position of any pipes or wires under any street or place authorised to be broken up by them on previously making or securing such compensation to the owners of such pipes or wires, and on complying with such conditions as to the mode of making such alterations as may be agreed upon between the undertakers and owners of such pipes or wires, and in case of difference of opinion then the matter may be determined in the manner prescribed by the license authorising the undertakers to supply electricity, or when no such manner is prescribed, then the matter is referable to arbitration. Then the latter part (clause 2) of the same section reserves the arrangements between the parties. It lays down that any local authority may in like manner alter the position of any electric lines or works of the undertakers subject to the identical provisions, conditions, and restrictions which are made applicable to any changes or alterations made by the undertakers. Therefore the law as we have it before us, and which as I have said is the English law on the subject, provides the procedure under which a local authority should act when it desires to alter the position of underground electric works. The section goes into considerable detail; it contemplates the payment of compensation and imposes various other conditions, and I may add that the model order, which is practically the form of license which will be adopted in Calcutta, subject to such modifications as local requirements may suggest, gives further details, such as the length of time for which notice has to be given and other things which the undertakers have to do when they require gas or other pipes to be removed. Exactly the same procedure is contemplated when the local authority such as a municipality, when altering its own sewers or pipes or for any other reason, has occasion to remove the works of the undertakers. And reflection will show that similar provisions should apply in both cases. The suggestion of the hon'ble mover of the amendment is there should be an entirely one-sided provision, and that the undertakers should bear the expense in both cases. This is just one of those proposals which is calculated to discourage the extension of electric energy in Calcutta. It will impose restrictions in Calcutta which have not been found necessary anywhere else, and will be viewed by undertakers as evidence of the wish of the authorities to put obstruction in the way of such undertakings. I attach no weight to the analogy put forward by the hon'ble member of the case of the Oriental Gas Company. The arrangement referred to is probably done under contract with the Gas Company, but Electric Companies should be protected by special provisions to be laid down in the Act. If you accept this amendment, you will practically be repealing the whole of the last portion of section 14 of the Bill. I trust, therefore, you will see the wisdom of leaving the Bill as it has been drafted by the Select Committee."

The Hon'ble BABU SURENDRANATH BANERJEE in reply said:—"I must confess that I have not been able to follow the hon'ble member in the line of argument he has thought fit to adopt in reply to my proposal. When I move an amendment on the lines of the English Statute, I am told that the peculiar circumstances of the case are such that the English law must be departed from. When again I move an amendment adapted to the particular circumstances of the case, I am told that the English Statute must be followed. We are fairly landed in a bewildering maze when we are confronted with an argument of this kind. The point on which the hon'ble member has laid considerable stress is that my amendment, if adopted, is calculated to discourage the growth of enterprise. If that be so, I admit that my amendment should not be adopted. But is it calculated to discourage enterprise? It certainly has not discouraged the Gas Company in carrying out extensive works in Calcutta. Undertakers will make their terms accordingly; they will recoup themselves by the terms they will impose when they find there is a proviso of this kind laid down by the Legislature. The Gas Campany in their dealings with the Corporation make no charge for shifting their pipes at the request of the Corporation. It is not a part of their contract to do so, but as a matter

of fact they do not charge anything when they shift their pipes at the instance of the Commissioners. Therefore, having regard to all these circumstances, I hope this amendment, which is made at the instance of the Chairman of the Corporation, will be considered as being reasonable and will be accepted by the Government. Local authorities represent the public, and this is a concession which they might fairly be expected to make for the public benefit, and I do not think undertakers ought to object to such a condition as this."

The motion was put and negatived.

The Hon'ble MR. COTTON said:—"With Your Honour's permission I will asl leave to move an amendment of section 27 to which I referred in my opening remarks to-day. The language of that section as it stands is, it must be admitted, obscure. The meaning, however, is plain enough. The meaning is that a person who commits an offence under this Act may also be prosecuted under any other Act for the time being in force for any offence which he may have committed under such Act, provided that he shall not be punished twice for the same offence. This is an obvious principle of law which it is perhaps not necessary to have inserted in this Act at all, and so we hesitated in Select Committee whether any section on the point should find a place in the Act. Ultimately, it was decided that for the edification of the general public, who might not be aware of the common law on the subject, statutory provision should be made as I have indicated. But I admit that the wording of the section does not convey the meaning as clearly as it might have done, and therefore move that the following words be substituted for section 27 as amended by the Select Committee:—

'Nothing in this Act shall exempt a person from any liability for any offence which is also made punishable under any other Act or law for the time being in force.'

These words, I think, convey the meaning of the Select Committee, and are not open to the exception to which the words contained in the draft Bill are open."

The motion was put and agreed to.

The Hon'ble MR. COTTON said:—"With your permission I do not propose to move to-day that this Bill be passed, but to suggest that it should stand over until the meeting of this Council next week so as to enable the Secretary in the Legislative Department and myself to examine the Bill once more with reference to minute details of drafting, and also to enable me to consider the suggestion thrown out by the Hon'ble MR. ANUNDO MOHUN BOSE in regard to the procedure to which he referred under sections 6 and 12 of the Bill. Section 12 is a reproduction of the English Act on the subject, and I am not in a position, until I have examined the reasons which led to the English Act being drafted as it is, to explain why there is no reference to bridges in that section."

The motion that the Bill be passed was postponed to the next siting of the Council.

THE CALCUTTA PORT ACT, 1890, AMENDMENT BILL.

The Hon'ble MR. RISLEY presented the report of the Select Committee on the Bill to further amend the Calcutta Port Act, 1890.

THE BHUTAN DUARS REPEALING BILL.

The Hon'ble MR. BUCKLAND presented the report of the Select Committee on the Bill to repeal the Bhutan Duars Act, XVI of 1869.

The Council adjourned to Saturday, the 3rd August, 1895.

C. E. GREY,
Offg. Assistant Secy. to the Govt. of Bengal,
Legislative Department.

CALCUTTA;
The 6th August, 1895.

WEATHER AND CROP REPORT.

For the week ending the 5th August, 1895.

Burdwan.—Rainfall at Sadar 1·68. Weather cloudy. Slight rain fell. Transplantation of *aman* is very backward for want of rain. *Aus* and sugarcane are doing fairly well. Condition of cattle good. Fodder and water sufficient. Commonest sort of rice sells at 20 seers a rupee.

Midnapore.—Rainfall at Sadar 2·73. Heavy showers this week and the previous week have done a great deal of good, but more rain is wanted all over the district, especially in parts of Contai and Ghatal. Paddy in the vicinity of the town seems to be doing well. Transplantation is said to be retarded for want of rain. Common rice is selling from 16 to 22 seers per rupee. Fodder and water plentiful.

24-Parganas.—Rainfall at Sadar ·90. Transplantation of *aman* is going on in low lands, but is retarded for want of rain. Fodder and water sufficient. Rice sells at—

		Srs.	
Sadar	11 to 13	0	per rupee.
Barasat	15	0	
Basirhat	18	13	
Diamond Harbour	15	0	

Murshidabad.—Rainfall at Sadar ·97. Transplantation of *aman* continues, but rain is much wanted. Harvesting of *bhadoi* has commenced. Indigo, sugarcane and mulberry are doing well. Fodder sufficient. Common rice sells at 16 seers per rupee.

Khulna.—Rainfall at Khulna 1·96, Bagerhat 2·12, Satkhira 3·20. Weather hot and cloudy. Transplantation of *aman* still going on. More rain is wanted. Price of common rice 16 to 22 seers 2 chitaks a rupee. Fodder and water sufficient.

Dinajpur.—Average rainfall 1·36. Weather cloudy and hot. More rain is wanted for transplantation of *haimanti* rice. Common rice sells at 14 seers a rupee. No outbreak of cattle-disease nor any complaint for fodder or drinking water.

Rangpur.—Average rainfall 1·68. Weather seasonable. Transplantation of *aman* continues. Prospects fair. Fodder available. Rice sells from 11 to 15 seers per rupee.

Pabna.—Rainfall 1·79. Weather hot and cloudy. Prospect of standing crops on high lands continues good. Common rice sells at Sadar 17 seers per rupee and at Serajganj 14 seers. Fodder sufficient.

Dacca.—Rainfall 1·73. Weather hot with rain at intervals. The sudden rise of the river has done some damage to *aus* and *aman* crops in some parts of Manikganj, to *aus* in Narayanganj and to *aman* in Sadar. Cutting of jute commenced. Price of common rice 12 to 19 seers per rupee. No cattle-disease. Fodder plentiful.

Chittagong.—Rainfall 1·30. Weather hot. Cultivation of *aman* progressing, but more rain is wanted. Water and fodder abundant. Sporadic cattle-disease continues. Common rice sells from 14 to 18 seers a rupee.

Patna.—Rainfall at Sadar 3·01. *Bhadoi* doing well. More rain wanted for transplantation of paddy on high lands in Bihar. Condition of cattle good. Fodder and water sufficient. Common rice selling from 16 to 18½ seers per rupee.

Gaya.—Rainfall at Sadar 3·34. *Bhadoi* crops doing well. Paddy being transplanted. Price of common rice at Sadar 15 seers per rupee, which is cheaper than average.

Champaran.—Rainfall at Motihari ·59. Transplantation of *aghani* crop going on. Standing *bhadoi* crops good: 16 annas outturn expected.

Darbhanga.—Rainfall 1·09 at Sadar, 2·97 at Samastipur, ·70 at Madhubani. Prospects of *bhadoi* crops continue favourable. Rain still wanted for transplanting purposes. Fodder for cattle sufficient. Prices stationary.

Bhagalpur.—Rainfall 1·30 at Sadar, ·50 at Banka, 1·42 at Madhipura, 2·89 at Supaul. Weather hot and sunny with occasional and insufficient rainfall for this part of the year. State of the standing crops in the Madhipura and Supaul subdivisions is fair. Rain is badly wanted in the Sadar and Banka subdivisions. No cattle-disease. Fodder and water sufficient. Price of common rice at Sadar 17 seers 10 chitaks per rupee.

Purnea.—Rainfall 1·50. Transplantation of *aghani* going on. All other crops doing well. Cattle-disease nearly disappeared. Fodder and water sufficient. Common rice selling from 15 to 20 seers a rupee at Sadar.

Cuttack.—Rainfall 4·23. Weather seasonable. Weeding and transplanting of rice crops continue. *Beali* rice in ear in places. Condition of cattle good. Fodder sufficient.

Hazaribagh.—Rainfall at Sadar 2·25. Sufficient rain throughout the district. Trans- [illegible] well advanced in places. All crops promise well.

General Summary.—There was rain all over the Province during the week, but in the greater part it was below the average of the time of year. More rain is needed in many districts, and in the Burdwan and Presidency Divisions the transplantation and cultivation of the winter rice crop are still very backward. Reports of the *aus* and jute crops are generally fair. These crops are being harvested in some districts, and new jute has begun to arrive in Calcutta. In Bihar and Chota Nagpur the prospects of the *bhadoi* crops are favourable. Cattle-disease has nearly disappeared in Purnea. There was no cattle-disease in any other district. The price of common rice continues almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 6th August, 1895.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 3RD OF AUGUST 1895.

AT the beginning of the week, weather was settled over Bengal, winds were light and southerly in the southern districts, and easterly in Assam, North Bengal, and Bihar. The rainfall was almost entirely confined to the east and north of the province, as only very light scattered showers fell in South-West Bengal, Orissa, and Chota Nagpur. Temperature was above the normal by about 2° in all districts except Assam and the neighbouring parts of North and East Bengal.

While weather was comparatively settled at inland stations, a change had commenced in the north of the Bay which in the course of two or three days resulted in a well-defined but shallow depression. On the 28th July, the first day of the present week, there was defective pressure everywhere, but the difference was greater in the north of the Bay than over Bengal or in the south. Defect was small everywhere, varying from a few thousandths of an inch to nearly a tenth at Akyab. Winds were light on the Orissa and Bengal coasts, and in the case of Orissa stations were blowing from the north-west, but in the south of the Bay, where gradients were steep, strong south-westerly winds prevailed. There had been a steady increase in wind velocity during the two previous days at Diamond Island, and the sea had become rough. General and in some cases heavy rain was falling over the east of the Bay. The depression in the north was so shallow that the irregular pressure change on the 29th caused a considerable displacement, and the centre of the cyclonic system of light winds appeared over the Sunderbans, but on the 30th a brisk fall of pressure in the north-west angle of the Bay was followed by a well-defined depression over that area, the centre being about midway between Saugor Island and False Point. Gradients were then very steep over the Bay, the difference between Saugor Island and Tavoy being not much short of half an inch. Rainfall was more general both on the 29th and 30th in Lower Bengal, but had become scattered in the northern districts. Squally weather continued over the Bay to within a short distance of the Sandheads, while in the north-west angle only light winds were blowing and the sea remained smooth. The centre of the shallow depression crossed the coast on the evening of the 30th, moving in a north-westerly direction, and at 8 A.M. on the 31st it was in Chota Nagpur. A general rise of pressure then prevailed except at a few stations within the area of lowest pressure, and the rise had been rapid in the north-west angle of the Bay. It was some time after the centre passed inland before there was any decided increase in the strength of the winds on the Orissa coast or at Saugor Island. The average wind velocity on the 31st was only 14 miles an hour at Saugor Island and 16 miles at False Point, but the rates at 8 A.M. were 28 miles at Saugor Island and 30 miles at Puri, and the sea was rough from the mouth of the Hooghly as far south as Gopalpur.

As the depression moved towards the north-west, ordinary monsoon weather became general in Orissa, Chota Nagpur, and Lower Bengal, but the rainfall, though general, was usually light, and temperature remained above the normal over the greater part of the province till the 31st. On the 1st of August the depression was in the North-Western Provinces, and pressure was rapidly recovering in Lower Bengal and more slowly in the northern districts. From being nearly 1° in excess on the 31st July temperature, owing to the more densely clouded sky, fell on the 1st August to nearly 2° below the normal except in the west of Bihar, where there was still excess. The rise of pressure continued on the 2nd, and the distribution was then above the normal over the whole area, including the province and the Bay. The immediate result of this arrangement was a rapid moderation of the rough weather over the Bay, and diminished rainfall in Orissa, Chota Nagpur, and Lower Bengal. Temperature began to rise, and by the morning of the 3rd was almost normal over the whole province.

Pressure was low in the early part of the week and above towards the end. The difference from the normal, however, was generally below a tenth of an inch, and the means for the week are, therefore, practically normal, defect being more than ·02 inch only in the south-western districts, across which the depression passed about the middle of the week.

Temperature was above the normal by small amounts, except on the 1st and 2nd of August, the two rainy days that followed the passage of the depression. Mean temperature is 1° below the normal in Assam and Orissa, almost normal in Bengal, and half a degree above in Bihar and Chota Nagpur.

Rainfall has been fairly well distributed during the week, but as the daily falls were lighter than usual, the total amounts for the week are considerably below the normal over the whole province except in Orissa. The falls in Assam have been moderately heavy, Dhubri receiving 6·47 and Sibsagar 5·9 inches. Except in South-West Bengal, where less than half the usual amount has fallen, the deficiency is very uniform. In North and East Bengal it is slightly over, and in Bihar and Chota Nagpur slightly under, one inch. The excess in Orissa is ·22 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 3rd of August 1895 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week			Rainy days.			Since 1st of month.		Since 16th May 1895.

The average humidity of July from 24 years' registers ...	85		
	Inches.		
The mean vapour tension of the month	0·986		
The average vapour tension of July from 9 years' registers ...	1·002		
The mean cloud proportion of the month	7·23		
The average cloud proportion of July from 18 years' registers	8·02		
	Inches.		
The total rainfall of the month	4·56		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	4·38		
The average fall of July from 48 years' registers	12·84		
The greatest fall in 24 hours	1·30	23rd	
	Days.		
The number of rainy days in the month	19		
The average number of rainy days in July from 24 years' registers	25		
The mean maximum equilibrium temperature of solar radiation during the month	⊖ 147·6		
The mean difference of sun and air temperatures	58·8		
The greatest sun temperature	159·2	11th	
The greatest excess of sun over air temperature	69·8	11th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	77·0		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2·1		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	3·5	11th	
	Miles.		
The mean movement of the wind per day	106·6		
The greatest movement of the wind in one day	185·0	19th	
The greatest movement of the wind in one hour	16·0	9th, 2 to 3 P.M	

The number of hours with winds from each of the 8 points—
N. 1, N.E. 13, E. 66, S.E. 109, S. 268, S.W. 204, W. 38, N.W. 5, Calm 40.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·6 higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

	Inches.
The total fall of rain from 28th July to 3rd August 1895	1 00
The average fall of the corresponding period for 24 years, Surveyor-General's Office	3·73
The total fall from 1st January to 3rd August 1895	21·38
The average fall of the corresponding period for 24 years, Surveyor-General's Office	36·33

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; t, thunder; p, passing temporary showers; ; dew.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

J. H. GILLILAND,

RESOLUTION ON THE ANNUAL STATISTICAL RETURNS OF VACCINATION IN BENGAL FOR 1894-95.

MUNICIPAL DEPARTMENT—SANITATION.

Calcutta, the 12th August 1895.

RESOLUTION—No. 3272S.

READ—

The Statistical Returns of Vaccination in Bengal for 1894-95 with brief notes by the Sanitary Commissioner.

READ AGAIN—

The Returns for 1893-94 with the Government Resolution reviewing them.

The returns for 1894-95 were due to Government on the 15th June, and were received on the 2nd July. No reason is assigned for the delay, which, however, is much less than it was last year, when the returns were nearly two months behind time. The changes among the Deputy Sanitary Commissioners were less numerous than in 1893-94, and, except in the Metropolitan Circle, where a transfer took effect towards the end of February, a single officer was in charge of the operations of the department throughout the working season.

2. *Strength of supervising and operating staff.*—The following table compares the strength of the supervising and working establishments during the last two years:—

Year.	Inspecting staff.						Operators.					Remarks.
	Superintendents.	Deputy Superintendents.	Inspectors.	Sub-Inspectors.	Head Vaccinators.	Total inspecting staff.	Vaccinators.		Apprentices.		Total operators.	
							Government or paid.	Licensed.	Government or paid.	Licensed.		
1	2	3	4	5	6	7	8	9	10	11	12	13
1893-94	50	1	63	137	14	265	458	1,830	13	985	3,286	
1894-95	51	1	62	143	14	271	479	1,985	7	1,005	3,566	

The creation of the new district of Angul raised the number of Superintendents from 50 to 51. A new Inspector was also appointed for Angul and two for the Tributary States of Orissa, while at the same time the designation of two officers employed in the Chota Nagpur States was changed from Inspector to Sub-Inspector, and a reduction of two took place among the Inspectors employed by municipalities and dispensaries. In consequence of these changes, the total number of Inspectors fell from 63 to 62. Six men were added to the staff of Sub-Inspectors, and this number also represents the increase in the total inspecting agency. Of the total increase of 21 paid vaccinators, 8 were employed in rural areas and 13 under municipalities and dispensaries. The staff of licensed vaccinators was increased by 156 in rural areas and reduced by one in towns. No reference is made in the notes to the orders given in the Resolution on the returns of 1893-94 that only regular operators should be included in the statistics of staff, but it has been ascertained from the Sanitary Commissioner that these orders have in fact been carried out. On the question of demanding a security deposit of Rs. 10 from licensed vaccinators, which was referred to in the Resolution on the statistics of 1893-94, the Sanitary Commissioner reports, after consulting the Civil Surgeons, that the system works well, and does not, as has been alleged, deter men from coming forward to serve as vaccinators. It gives the Superintendents a hold over the vaccinators and protects Government from loss by their absconding with instruments entrusted to them. As, moreover, Civil Surgeons may, at their discretion, forego the deposit in individual cases, or reduce the amount demanded, the Lieutenant-Governor thinks the system may remain in force.

3. *Number of operations and average per vaccinator.*—The total number of vaccinations performed rose from 1,844,304 to 2,174,097 and the average per operator from 560 to 608. The increase was highest in the following districts:—

Mymensingh	... 31,232	Saran	... 15,238
Angul	... 31,082	Jessore	... 14,659
Noakhali	... 23,323	Balasore	... 13,692
Backergunge	... 19,117	Nadia	... 12,682
Faridpur	... 18,327	Orissa States	... 11,326

and these results do credit to the officers concerned. Praise is more especially due to Dr. Banks, the Civil Surgeon of Puri, who has been singularly successful in pushing vaccination in a backward district, the number of vaccinations performed in the district having risen from 16,828 in 1893-94 to 20,234 in the year under report. Twelve districts show a falling off, the decline being largest in—

Darbhanga	... 7,456	Hazaribagh	... 6,635
Shahabad	... 6,703	Bankura	... 4,165

It is very unsatisfactory to find that the introduction of the licensed system into Darbhanga should have reduced the number of operations. In Shahabad and Bankura the falling off is ascribed to the unhealthiness of the district, and in Hazaribagh to the retention of a clumsy practice, introduced many years ago, of working though each thana by a two-year rotation, which renders it difficult to

make an accurate comparison between the results of different years. Vaccination in Calcutta by Municipal vaccinators shows an increase of 35,968, and in municipalities and dispensaries of 21,854. The number of vaccinations performed by the two salaried vaccinators attached to the Animal Vaccine Depôt in Calcutta rose from 213 in 1892-93 and 234 in 1893-94 to 8,531 in 1894-95, giving the high average of 4,265 operations for each vaccinator. No mention is made in the notes of this remarkable increase, which was clearly due to the recent outbreak of small-pox in Calcutta. Under the circumstances it is not surprising that a large number of operations should have been done, and there is no reason to distrust the statistics. In the Chittagong Hill Tracts, on the other hand, which are wrongly described in the notes as the South Lushai Hills, the high average of 1,578 operations per vaccinator seems hardly likely to be correct, although, as vaccination was only started there in 1892-93, the outturn would naturally be a large one. Attention was drawn to this point in the Resolution on the returns of 1893-94, and the Lieutenant-Governor is surprised that no notice should have been taken of his remarks on the subject, and that even the error in the name of the sub-division should not have been corrected.

4. *Protection afforded to infants.*—Under this head the returns show an improvement. The number of infants under one year available for vaccination was estimated at 2,491,305 against 2,461,862 in the preceding year, and of these 405,065, or 162·59 per thousand, were vaccinated as compared with 363,492, or 147·83 per thousand, in 1893-94. As in the previous year, Malda, Lohardaga, Darjeeling, and Palamau show the best results. Patna is again at the bottom of the list, and Gaya, Puri, Shahabad, Cuttack, and the Tributary States of Orissa also have low percentages. No attempt is made in the report to give an intelligent explanation of the marked differences which appear in respect of vaccination between districts of similar character in other respects. The Sanitary Commissioner contents himself with repeating the suggestion thrown out in the Resolution on the last year's report that these were apparently to be accounted for by very unequal activity on the part of the vaccinating establishment. It does not seem to have occurred to Dr. Gregg to test the correctness of this view by independent enquiry, or to take steps to raise the standard of work in these backward districts.

5. *Primary operations.*—The proportion of successful primary operations is again incredibly high, being 98·66 for the whole Province against 99·20 in the previous year. In the Resolution on the report for 1893-94 the attention of the Sanitary Commissioner was drawn to this point and a further explanation was called for, which elicited from Dr. Gregg the statement that the vaccinators were unwilling to include in their lists any except perfect cases of operation. This statement is now repeated in general terms, and it is added that vaccinators "carefully suppress" all doubtful cases in order to avoid being "harassed by inspecting officers." Further enquiry has shown that so long ago as January 1894 the Deputy Sanitary Commissioner of the Metropolitan and Eastern Bengal Circle reported an actual case in which a licensed vaccinator, when taken to task for not recording unsuccessful cases, replied that he never entered failures because the District Inspector had told him not to do so. The existence of this practice seems to explain both the small number of vaccinations performed and the incredible percentage of successful cases among primary operations. The only point that still remains obscure is how the Sanitary Commissioner, who has been in charge of the Department since 1888, can have failed, in spite of the repeated comments of this Government and of the Government of India on the inherent improbability of the statistics, to clear up this simple matter for himself. When the returns of 1893-94 were submitted, Dr. Gregg had had before him, for more than six months, Dr. Moir's report referred to above; yet the notes on those returns make no mention whatever of a fact, the mere suggestion of which vitiates the entire body of statistics of primary vaccination. Even when a special report was called for, and arrangements were made for retaining in the villages the list of vaccinations performed in order that inspecting officers might test it, the Sanitary Commissioner still omitted to lay before Government the facts which furnished a clue to the whole difficulty. The Lieutenant-Governor trusts that Dr. Gregg's successor will take this matter vigorously in hand and will lose no time in putting a stop to a dishonest practice which makes it impossible to obtain a true view of the working of an important department.

6. *Secondary operations.*—The number of secondary operations rose from 14,888 to 67,955, or by 53,067 cases. Of these, 38,732 occurred in Calcutta, 30,674 in the operations carried on by the Corporation, and 8,058 in those conducted by the staff of the Government Animal Vaccination Depôt, which performed 8,140 secondary operations against 82 in the previous year. The latter figures have been included by the Sanitary Commissioner in the returns of rural areas which, apart from this, show an increase of only 525. In mufassal municipalities and dispensaries there was an increase of 13,810 cases, so that the entire increase is practically divided between these agencies and Calcutta.

7. *Vaccination at the expense of District Boards.*—The contributions made by District Boards for the purpose of giving free vaccination in rural areas rose from Rs. 654 to Rs. 1,690, of which Rs. 324 were spent in Tippera, Rs. 241 in Gaya, and Rs. 1,125 in Puri. In Tippera the number of successful operations increased from 48,917 to 57,302, and in Puri from 16,401 to 19,527, while in Gaya there was a slight decline. The Lieutenant-Governor hopes that in districts or parts of districts where the licensed system fails to make way among the people the District Boards will lend aid by contribution so far as their resources permit.

8. *Cost of vaccination.*—The following statement shows the cost of vaccination in Bengal during the last two years as distributed between Government, District Boards, Municipalities, and Native States:—

	1893-94.	1894-95.
	Rs.	Rs.
Paid by Government	1,44,723	1,55,096
District Boards—		
Rural areas	654	1,690
Municipalities	351	...
Municipalities—		
Calcutta	15,495	18,642
Mufassal	17,658	18,208
Native States	1,319	1,582
Total ...	1,80,200	1,95,218

The average cost of each successful operation to Government or to local bodies was 1 anna and 6 pies against 1 anna and 7 pies for the previous year.

9. *Death-rate from small-pox and proportion of population protected.*—The number of deaths from small-pox during the year 1894-95 was 9,562, or 1·3 per ten thousand of population, as compared with 12,499, or 1·7 per ten thousand in the preceding year. In the following districts, which return the highest death-rate, the proportion of the population protected by vaccination is also low:—

District.	Protected per 10,000.	Death-rate per 10,000.
Calcutta	1,400	23·0
Cuttack	1,000	7·1
Faridpur	1,900	4·5
Monghyr	1,600	4·3
Puri	1,200	2·5
Midnapore	1,600	2·3

Darjeeling, with half the population protected, had no deaths, and Chittagong, with 4,700 protected per ten thousand of population, had a death-rate of 0·2. In the case of Chittagong, however, it is doubtful whether the statistics of the earlier years of the period on which the calculation of protected persons is based can be accepted as correct. In paragraph 40 of the report of the Sanitary Commissioner for Bengal, the small-pox mortality of the year 1894 (·11 per thousand) is stated to be the lowest on record, but the statistics show that in the three years 1886, 1887, and 1888, the death-rates from this cause were ·06, ·05, and ·09, respectively.

10. *Methods of vaccination.*—Three methods of vaccination are now practised in Bengal,—(1) with vaccine lymph taken direct from the calf, (2) with

vaccine lymph prepared with lanoline, (3) with human lymph taken by arm-to arm transfer. The Sanitary Commissioner has prepared a statement, given at page 14 of his notes, which purports to show the comparative value of the three methods. But in the first place the statement is extremely incomplete, and whatever value it might possess is nullified by the doubt as to the value of any statistics from which all negative instances have been eliminated. A few experiments in vaccination from the kid were made during the year, but they proved a failure. Further experiments are being conducted. The animal vaccine depôts at Calcutta and Darjeeling are said to have worked well, but no particulars are given by which to judge of their progress, nor is any mention made of the interesting fact that in August 1894 the Nepal Darbar asked for a supply of lanoline vaccine paste in order to introduce vaccination on a large scale. When Sir Charles Elliott visited Nepal in November last he learned that the Prime Minister was an earnest advocate of vaccination and had had his own family vaccinated. The Lieutenant-Governor considered it extremely desirable to encourage this enlightened movement, not only from motives of humanity, but in order to enlist the influence of the leading Hindu State in India on the side of vaccination. Arrangements have accordingly been made to provide the Nepal Darbar with a regular supply of vaccine lymph. Sir Charles Elliott trusts that the Sanitary Commissioner will realise the importance of assisting the Darbar in this matter by all means in his power.

11. *Inspections.*—The number of villages visited by the Deputy Sanitary Commissioners was 1,098 against 1,516 in the previous year; and the number of operations inspected by them shows a decline from 35,443 to 26,564. On the other hand, Civil Surgeons have shown increased activity in this branch of their duties. Surgeon-Lieutenant-Colonel E. G. Russell visited 206 villages in Dacca and inspected 12,379 operations, and in Muzaffarpur Surgeon-Major F. S. Peck inspected 9,998 operations in 353 villages. Fifteen Civil Surgeons inspected more than 5,000 operations, 24 from 1,000 to 5,000, and eight under 1,000. No return of inspection was received from Assistant Surgeon S. M. Mukerji in charge of Angul, and this omission should be explained. Although small-pox prevailed in Calcutta in an epidemic form, and the number of operations performed by the Municipal vaccinators rose from 15,313 to 51,281, only 181 cases were inspected by the Health Officer.

By order of the Lieutentant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Government of Bengal.

THE ASHUK ASTAMI FAIR IN NANGALBAND IN THE DISTRICT OF GAYA.

No. 1391G., dated Dacca, the 17th July 1895.

From—H. LUTTMAN-JOHNSON, Esq., Commissioner of the Dacca Division,
To—The Chief Secretary to the Government of Bengal.

I HAVE the honour to acknowledge the receipt of your letter No. 20J.D., dated 30th April 1895, inviting my attention to paragraphs 5 and 14 of the Report on Native Papers for the week ending the 20th April 1895, containing extracts from the *Dacca Gazette* and *Samaya*, complaining of the deficient arrangements made by the executive authorities on the occasion of the Ashuk Astami Fair in Nangalband, in the district of Dacca, and requesting me to obtain and submit to Government, with my remarks thereon, a report from the Magistrate of Dacca on the subject. In reply, I have the honour to forward copies of the following letters from the Magistrate of Dacca—

No. 1199, dated 11th May 1895.
„ 1455, „ 15th June „
„ 1673, „ 9th July „

I invited the Magistrate's attention to the statements in the newspapers in my letter No. 875J., dated 4th May 1895. The reports of 2nd May from the

Chairman of the Local Board, and of 4th June from the Subdivisional Officer—enclosures to the Magistrate's letter of 9th July—give a clear account of the arrangements.

2. I saw the Chairman of the Local Board some time before the fair took place, and heard what he proposed to do. I visited the fair myself on 3rd April, the principal bathing day. In my opinion the police arrangements were ample. I think the sanitary arrangements might have been on a more liberal scale. Though a large concourse was expected, the effects of improved communications, rail and steamer, were apparently under-estimated. The Subdivisional Officer and the Chairman of the Local Board exerted themselves to the utmost, and I have had pleasure in acknowledging their good work.

No. 1199, dated Dacca, the 11th May 1895.

From—C. J. S. FAULDER, Esq., Magistrate of Dacca,
To—The Commissioner of the Dacca Division.

WITH reference to your No. 875J., dated 4th instant, I have the honour to reply that the statements published are gross exaggerations.

2. There was a large concourse of people, about 300,000.

3. There were only 16 cases of cholera at the fair; 9 died, 5 recovered, and 2 went to their houses. This cannot be called many; but we had a virulent outbreak of cholera when the fair dispersed. The site of Nangalband is unsuited for a mela; there is very little open ground; behind the site of the mela are villages imbedded in jungles, in which it is impossible to effectively enforce sanitary precautions; such arrangements as were possible were made; it is a matter for congratulation that there was not a severe outbreak of cholera, which must admittedly be attributed to good fortune rather than efficient control, which it is not possible to ensure. Such cases as occurred were due, not to an outbreak at the mela, but to persons contracting cholera on the road, and bringing it with them. There were enormous crowds of pilgrims, chiefly old women, swarming to the mela from all directions. Owing to their following so many routes, and to their being scattered far and wide, it was impossible to help them *en route*; they neither made nor found any adequate arrangements for their board and lodging on their way to the mela; the weather was inclement, and they had to suffer great hardships; cholera of course broke out, on the return journey especially, and started an epidemic all over the district, which has not yet died out.

4. A dumb girl, aged 15 or 16, of Rajshahi district, was kidnapped by a chandal of this district. The man was arrested by a chaukidar while crossing the ferry at Fatulla. He was sent up for trial, and convicted under section 363, Indian Penal Code. One old woman and several children were reported missing. Most of them were found and made over to their relatives. It is believed that the others were all found, as their relatives did not come back to inform the police before leaving the fair.

5. In my opinion the police arrangements were good; both officers and men worked hard, many of them being up to their middles in water, and all being covered with mud and slush. As usual they are abused and get no thanks. Many old people and children would have had a bad time of it at the ghâts, which were very slippery from mud and slush, had it not been for the friendly arm of a policeman. Considering the small space and the enormous crowd, it is marvellous to me that the police were able to exercise any control at all.

6. No gangs of people were allowed to go about maltreating people and using violence to women. No complaint of any such thing having occurred was made.

7. With regard to the murder, as to which the correspondent says he personally witnessed a person being deliberately trampled to death, no person was reported to have died from injuries.

One woman had her leg broken by a fall at Digu Babu's Ghat, and another hurt her head by a fall. Both these cases were sent by the police for treatment.

No. 1455, dated Dacca, the 15th June 1895.

Memo. by—The Magistrate of Dacca.

COPY submitted to the Commissioner of the Dacca Division, with reference to his No. 1621G., dated 22nd May 1895.

A statement of cost is enclosed.

Dated Dacca, the 28th May 1895.

From—T. C. OAR, Esq., District Superintendent of Police, Dacca,
To—The Magistrate of Dacca.

I HAVE the honour to submit the following report regarding the "Ashuk Astami" mela, which was held at Nangalband in the jurisdiction of Narayanganj police-station.

2. This is the annual bathing festival which takes place on the "Ashuk Astami" day, which fell this year on the 3rd April.

3. The origin of the festival is as follows:—

Parsu Ram Khetri, of the family in which the god Krishna was born, was out ploughing one day, his intention being to open out a channel in order that he might join the "Brahmaputra," which is the only male river, to the Ganges river.

Suddenly he was called off to the wars, the place where he stopped ploughing being called "Nangalband." He promised to return and carry out the marriage of the two rivers, but when he did return he found that the Brahmaputra had formed an illicit connection with the river Lakhya; on this he cursed the river and said it would no more be sacred. Afterwards having relented he said it would not be sacred except on the Ashuk Astami day in the month of Chaitra.

4. This year the festival fell on a most auspicious day, "Budh Astami," which only occurs once in 17 or 18 years. In an ordinary year the fair is attended by about 50,000 pilgrims, but on the present occasion there were about 350,000 pilgrims, who came from all over Lower Bengal.

5. It is considered very holy for a pilgrim to remain at Nangalband during the whole month of Chaitra, and 1,657 persons collected there on the 30th Falgun (13th March 1895) for this purpose. The ordinary pilgrims began to arrive on the 1st of April, and began to leave on the afternoon of the 3rd April, and all had left on the 5th April.

6. About 20,000 boats crowded with people were moored in the river. They extended from Mirkandi to Panchamighat, a distance of about four miles, and as the people in these boats used the river for all purposes, the water was very much polluted.

7. Many of the pilgrims came by rail and steamer, and owing to the press of traffic, goods waggons had to be used for their conveyance. These pilgrims, when landed, passed through Narayanganj, and crossed the Lakhya river at Nabipura Ghát, 25 boats being used for the purpose, and the ferry arrangements being good. They then did the remainder of the journey on foot.

A large number of the pilgrims came by boat or by road, many of them having walked long distances.

8. The weather was very inclement, there being heavy showers of rain with great changes of temperature. At Nangalband, the bulk of the pilgrims slept in the open, there being no accommodation for them.

9. There are six ghâts at the place, owned by Enait Ali Mia of Dacca, Brojendra Kumar Rai, Kishori and Josada Lall Rai of Babati, Hari Das Bysak and Kunja Lal Bysak of Dacca, Govinda Chandra Rai of Dubtara, and Kali Narain Rai of Bandar. The Tajpur Ghát, near Jay Kalibari, belonging to the Baliati Babus, was very much out of repairs and in a dangerous state. A notice is said to have been served on the owners by the Local Board directing its repair, but nothing was done.

An attempt was made to prevent this ghât being used, but as the pilgrims consider it necessary to bathe at all the ghâts, this was found impossible, and a large force of police had to be used in assisting old people and children up and down, and preventing accidents. The water at the ghâts was railed in, and constables were stationed in the water to prevent people being drowned.

10. No drinking water is available at the place, except that of the Brahmaputra river, which, as remarked before, was very much polluted.

11. Twenty-six mehters and three Domes were engaged by the Local Board, but this staff was quite insufficient to keep the place clean, and the latrine accommodation provided was quite inadequate.

12. The police force deputed for duty at the festival consisted of 4 Inspectors, 3 Sub-Inspectors, 6 head-constables, 85 constables, and all the chaukidars of the surrounding villages; one and all worked hard, and no disturbance of any kind took place.

13. One woman got her leg broken by falling at one of the ghâts, and another hurt her head by a fall. Both were sent to Narayanganj hospital for treatment.

14. A dumb girl, about 15 years of age, of Rajshahi district, was kidnapped by a chandal of this district. He was, however, arrested by a chaukidar at Fatulla ferry ghât, sent up for trial, and convicted under section 363, Indian Penal Code.

One man was caught with a number of half-pice in his possession, coated with quick-silver. He was sent for trial under section 240, Indian Penal Code, and convicted. Three cases of petty theft were reported. In all of them the accused were arrested, sent for trial and convicted.

A number of children and old women were reported missing. Most of them were found and made over to their relatives, and the others are believed to have been found, as the parties did not come back to make enquiries.

15. There were a large number of shops at the fair for supplying the wants of the pilgrims, and they were carefully inspected to see that no unsound fruit or vegetables were being sold.

16. The Local Board erected the hospital for infectious diseases in the fair itself, but this was promptly removed to a distance under orders of the Magistrate.

The hospital staff consisted of a native doctor, a compounder, and a chaprassi.

The two latter died from cholera, contracted at the fair immediately after it broke up. The staff worked hard, and it is to be hoped that they received extra remuneration for their work.

A statement is attached showing the cases treated between 26th March and 7th April 1895, with results. As might be expected, cholera broke out. It first made its appearance on the 26th March 1895. Five persons died of cholera in the fair before they could be removed to hospital, and nine in hospital, and many others went off to their homes as soon as they were attacked. When the fair broke up, cholera spread all over the district along the routes taken by the pilgrims, and very large numbers of people died from it.

The site of the fair is hemmed in by jungle, and is quite unsuited for any large gathering of people.

The want of a pure supply of drinking water is its greatest drawback, but even if this could be overcome, I am very doubtful if anything would prevent the pilgrims drinking the polluted water of the Brahmaputra. The fact that the pilgrims had to travel long distances to the fair, and they had to be in the open exposed to rain and wind, must have predisposed them to any epidemic disease. Three residents of a village close to the fair were attacked with small-pox, of whom one died. None of them would go to hospital for treatment.

Mr. Lucas, the Sub-divisional Officer of Narayanganj, was in camp at the fair, and the satisfactory manner in which this very large gethering was controlled is due to his tact and energy. I attended the fair on the 1st and 3rd, and looked after the police arrangements.

Statement showing the indoor patients of the Hospital at Nangalband Fair from 26th March to 7th April 1895.

NAME OF DISEASE.	Number attacked.	Number died.	Number recovered.	Gone home.	Sent to other hospitals.	REMARKS.
1	2	3	4	5	6	7
Cholera	16	9	5	2	.....	There were 58 outdoor patients (32 attacked with cholera, 10 with choleraic diarrhœa, and [10 simple diarrhœa): these persons took medicines from the hospital and went away.
Choleraic diarrhœa	2	.....	2	.....	.....	
Simple diarrhœa	1	.....	1	.....	.....	
Fever	13	.....	7	6	.....	
Total ...	32	9	15	8	.....	

T. C. ORR,
District Superintendent of Police.

Additional note.

THE police and their officers were located at different parts of the fair and patrolled it day and night to prevent crime and disturbances. Sick persons were removed to hospital. During the time of bathing, a large force were stationed at each ghât, some being in the water, there being a tremendous crush. This was done to prevent accidents. Old persons and children were assisted up and down.

A head-constable with a few men was stationed at Nabipur Ghât in the Lakhya, to see to the crossing of pilgrims. In fact everything was done by the police to assist the public.

T. C. ORR,
District Superintendent of Police.

No. 1673, dated Dacca, the 9th July 1895.

From—C. J. S. FAULDER, Esq., Magistrate of Dacca,
To—The Commissioner of the Dacca Division.

WITH reference to your No. 1289G., dated 2nd instant, I have the honour to reply that Mr. Lucas was at Nangalband, looking after the arrangements, on the 28th and 31st March and during the principal bathing days, the 3rd and 4th April.

2. Thirty-two temporary latrines were erected. Long trenches were also dug in the fields, in which people were directed to ease themselves, earth being thrown in from time to time. To provide adequate latrine accommodation for three or four lakhs of people was obviously hardly possible; as the locality is not open, but is covered by villages and jungle in every direction. People will not go to the latrines when they are made.

3. The District Board is entrusted with the sanitary arrangements at melas by law; the duty has been delegated to the Chairman of the Local Board since 1888. No more fitting agent of the District Board is available. The Sub-divisional Magistrate exercised a co-ordinate supervision, and I myself went over the ground with the Chairman of the Local Board before the bathing day, and had the arrangements improved where I found it necessary and possible.

4. Babu Sarat Chandra Gupta took the whole burden of the work upon his shoulders, frequently visited the spot before and during the bathing days, laid out the plan of the fair, looked as far as possible after the housing of the pilgrims, showed the police what was to be done at the ghâts, made all sanitary and medical arrangements, and treated with the zamindars as to the contributions and the assistance to be given by them.

5. I enclose copies of the reports of the Sub-divisional Officer and the Chairman of the Local Board.

No. $\frac{200}{XVI}$, dated Narayanganj, the 4th June 1895.

From—L. T. R. LUCAS, Esq., Sub-divisional Officer of Narayanganj,

To—The Magistrate of Dacca.

I HAVE the honour to submit my report on the Langalband fair, held in April last. The fair is an annual one, and is really only a bathing festival. Shop-keepers and other vendors visit it just for a few days.

2. The origins of the festival are as follows:—(1) Parasuram Khettri, a celebrated Brahman, was ploughing at the place when he was called away to the wars. The place were he stopped ploughing has ever since gone by the name of langal (plough) bund (stoppage). (2) The five Pandavas were ordered by the Kamravas to remain in unknown exile (nirjanbas) for 12 years. They remained concealed in different parts of India, and during the last few days of their exile they visited Langalband, with their co-wife Draupadi. Before starting for home, they all bathed on the banks of the Brahmaputra at the five different places now known as the Panchami ghâts. The beauty of the five brothers and their fair wife Draupadi so enchanted the peasants that one and all stopped ploughing to see them. Hence the name Langalband. One of the brothers crossed over to the opposite bank, and abused the others because they would not follow him. So that bank is not held sacred, and pilgrims do not bathe on that side, and it goes by the name of "Pandava-barjita." In fact, I have always found that that bank is now used as a big latrine for female pilgrims and those living in boats.

3. I visited Langalband to superintend the preliminary arrangements, twice by myself, and once with the Collector, and carried out his suggestions and changes. The District Superintendent of Police was present on two days. I kept a 30-feet wide road right through the mela grounds for passage of pilgrims and sight-seers.

4. Upwards of three lakhs and fifty thousand pilgrims attended the mela this year on account of Budhastami Snan, which occurs once in 17 or 18 years and is held to be very auspicious. I was present on the two bathing days, and the crowd and rush was very great. The ground all over the mela was as slippery as possible, and one or two old women got some nasty falls. They were immediately attended to.

5. Notices had been previously issued on the landlords and ijaradars to have the ghâts repaired, as they were in a very bad state, and to clear the mela grounds of jungle. This was generally done. One ghât had not been repaired for want of sufficient material, and so I was obliged to close it during the two bathing days.

6. The sanitary arrangements were on a larger scale this year, but still they were quite inadequate for the immense gathering of pilgrims. It was not easy to arrange for the wants of over three and-a-half lakhs of people, two-thirds of whom were females, and who could not be compelled to visit the latrine provided for. It was a difficult task to keep the mela grounds clear.

7. Temporary sheds were erected by the landlords for housing patients and medical officer. These were sufficient. There were 16 indoor and 32 cases of outdoor cholera patients, 12 of choleraic diarrhœa, 118 of simple diarrhœa, and 6 cases of fever. The cases of cholera proved in most instances fatal. This does not give any idea of the cholera cases that really occurred, for many left for their homes in boats or by land immediately they felt they were attacked.

8. After the festival, a large number of pilgrims came to Narayanganj to catch the steamers. They were compelled to remain in the town, as there was not sufficient steamer accommodation, and from 3rd to 13th April there were 62 cases of cholera. There were only three or four isolated cases of small-pox.

9. Upwards of 1,500 resident pilgrims came to attend the mêla about a month previously. They had good rest and the mortality amongst them was almost nil.

10. On account of the very large gathering, crime could not altogether be suppressed, though 4 Inspectors, 3 Sub-Inspectors, 6 head-constables, and 85 constables were stationed at the spot. I gathered as many chaukidars as possible from the surrounding villages, and they and the police did good service. Besides one pick-pocketing and two other petty theft cases, there was a case in which a man was found in dishonest possession of false and quicksilvered pice, and a case in which a namasudra kidnapped a dumb young girl, the wife of a landholder in the Rajshahi district, who had accompanied her husband to the bathing festival. All these cases ended in conviction, and the chaukidar who arrested the accused in the kidnapping case, as he was about to escape to Keraniganj, was duly rewarded.

11. None of the European residents of Narayanganj visited the fair, but a large number of the native gentry, both of Dacca and Narayanganj, attended the festival.

12. Enclosed is the report of the Chairman of the Local Board.

No. 14, dated Narayanganj, the 2nd May 1895.

From—BABU SARAT CHANDRA GUPTA, Chairman of the Local Board, Narayanganj,

To—The Sub-divisional Officer of Narayanganj.

IN obedience to the order of the Chairman of the District Board, Dacca, by his letter No. 1051, dated the 26th February 1895, I have the honour to submit through you the following reports on the late Nangalband fair to the District Magistrate of Dacca.

1. This year the Nangalband fair commenced from Wednesday, the 3rd April 1895, and lasted for about four days. But on account of Budhastami Snan, which is considered to be very auspicious, according to the Hindu Sastras, there was an unusually large gathering of

pilgrims, since several days before the commencement of the mela, which necessitated the engagement of the sweepers and the native doctor earlier than other years.

2. During this time numerous shop-keepers assembled at this place from different quarters to vend their articles of various description. Things that were brought for sale were estimated to be of some Rs. 75,000, and those that were purchased were approximately estimated to be of some Rs. 40,000. The total number of people was about 40,000, including 1,757 who came to reside there as pilgrims for a month.

3. Myself and the Vice-Chairman, Babu Kailas Chandra Nag, both undertook the superintendence and the conservancy arrangement of the fair, and I stayed there for five, and the Vice-Chairman for four days. Besides, we also went to Nangalband to make the preliminary arrangement of the fair.

4. The shops and stalls were all aligned, and built a proper width apart on two sides of the street. The zamindars erected six huts—one for the native doctor, one for the vaccinator, one for contagious cases, one for ordinary patients, and two for the sweepers at a suitable place on the spot.

5. All the land-owners contributed Rs. 80 for expenditure on sanitary and other contingent charges of the fair; each proprietor had to pay in proportion to his respective share of the mela ground. But the expenditure incurred in connection with the fair exceeded the amount of contribution. The excess amount ought to be realized from the proprietors of the mela ground.

6. This year 26 mehters were engaged at a cost of Rs. 70-10-9, and a sum of Rs. 20 was paid to the Civil Surgeon for lending the services of the native doctor, and for the cost of medicine; and a sum of Rs. 25 was spent for publishing notice boards, and for purchasing bamboos, mats, strings, &c., for the use of the latrines that were made for the mela.

This year 32 latrines were made for the use of the pilgrims, some of which were apart for the females.

INDOOR PATIENTS.

7. There were 16 cases of cholera, of which 9 died, and 5 were cured, and 2 were sent back to their houses. Two of choleraic diarrhœa and 1 of simple diarrhœa, and 13 of fever, all of whom were cured, except 6 cases of fever that were sent back to their houses. There was a case of contused wound by a fall, which was removed to the Narayanganj hospital.

OUTDOOR PATIENTS.

There were 158 cases altogether, of which 32 were of cholera, 10 of choleraic diarrhœa, and 116 of simple diarrhœa that came under treatment.

8. There were 3 Inspectors of Police, 3 Sub-Inspectors of Police, and 6 head-constables, with a number of police force present at the mêla. All of them worked satisfactorily.

9. The Sub-divisional Officer, Narayanganj, and the District Superintendent of Police, went to the mêla.

Much inconvenience was felt by the pilgrims in going down to bathe in the river on account of several cracks and breaks in some steps of the pucca ghât there, which was fenced by bamboos. The District Magistrate will be kind enough to pass orders on the proprietors for the necessary repairs of the ghât, viz., Tazpur Ghât, before the commencement of the next mela.

Contributions realized from the zamindars were as follows:—

	Rs.	A.	P.
Babu Brajendra Kumar Rai Chaudhury	20	12	9
„ Kisori Lal Rai Chaudhury			
„ Jasada Lal Rai Chaudhury			
Ulfatannessa Bibi	22	6	6

WEATHER AND CROP REPORT.

For the week ending the 12th August, 1895.

Burdwan.—Rainfall at Sadar 1·35. Weather cloudy and hot. State of *aus* and sugarcane fair. Rain is wanted for *aus* crop and for transplantation of *aman* rice. Condition of cattle good. Fodder and water sufficient. Common sells at an average price of 17 seers a rupee.

Midnapore.—Rainfall at Sadar 1·54. Weather seasonable and hot. More rain wanted everywhere in the district. Prospects of indigo and sugarcane good. Transplantation of paddy going on. Common rice is selling from 16 to 22 seers per rupee.

24-Parganas.—Rainfall at Sadar 2·12. Weather hot with occasional showers. Prospects of crops fair, but rain wanted especially in the north of the district. Transplantation

of *aman* retarded for want of sufficient rain. Cattle-disease reported from Basirhat. Fodder and water sufficient. Prices stationary. Common rice sells at—

		Srs.	c.	
Sadar	11 to 13	0		
Barasat	15	0		
Basirhat	18	13	per rupee.	
Diamond Harbour	15	0		

Murshidabad:—Rainfall 1·00. Transplantation of *aman* retarded owing to want of rain. Harvesting of *bhadoi* still continues. Sugarcane and mulberry doing well. Jute very good. Rain much wanted. Fodder sufficient for cattle. Common rice sells at 15 seers per rupee.

Khulna.—Rainfall at Khulna 1·09, Bagerhat 2·35, Satkhira 2·87. Weather hot. Transplantation of *aman* going on. More rain wanted. Price of common rice 16 to 22 seers 2 chitaks a rupee. Fodder and water sufficient.

Dinajpur.—Average rainfall 1·2. Weather hot and cloudy. More rain wanted for transplantation of *haimanti* rice. Price of rice 14 seers a rupee. No outbreak of cattle-disease, nor any complaint for fodder or drinking water.

Rangpur.—Average rainfall 1·18. Weather seasonable and warm. Cutting of jute and transplantation of *aman* paddy in progress. Prospects fair. Fodder available. Price of rice 10 to 14 seers per rupee.

Pabna.—Rainfall 0·74. Weather cloudy and rainy. *Aus* paddy and jute being reaped. Rivers higher than before this year. Low lands submerged. Common rice selling at Pabna 17 seers per rupee and at Sirajganj 14 seers. Jute selling at Rs. 4-15 to Rs. 5-10 per maund at Sirajganj. Fodder sufficient.

Dacca.—Rainfall 1·11. Weather hot with rain at intervals. Harvesting of jute and *aus* rice continues. Sudden rise of water has partly damaged *aus* and *aman* in some places. Price of common rice 12 to 19 seers per rupee. No cattle-disease. Fodder available.

Chittagong.—Rainfall 0·24. Weather hot. Agricultural operations in progress. Prospects of crops generally fair, but more rain needed. Water and fodder sufficient. No cattle-disease. Rice sells from 14 to 17 seers a rupee.

Patna.—Rainfall 2·99. *Bhadoi* crops doing well. Paddy being transplanted. More rain wanted for transplantation on high lands. Condition of cattle good. Fodder and water sufficient. Common rice selling from 16¾ to 18 seers per rupee.

Gaya.—Rainfall at Sadar 1·30. *Bhadoi* crops doing well. Transplantation of paddy progressing. Price of rice 15 seers per rupee, which is cheaper than average.

Champaran.—Rainfall at Motihari 1·71. Transplantation of *aghani* rice going on. *Bhadoi* crops good, but partly damaged by flood in some places.

Darbhanga.—Rainfall at Sadar 2·27, Madhubani 4·78, Samastipur 2·98. Prospects of *bhadoi* crops continue favourable. More rain wanted for transplanting paddy. Fodder for cattle sufficient. Prices stationary.

Bhagalpur.—Rainfall at Sadar 3·24, Banka only 0·96. Weather hot and rainy. Prospects of crops continue to be good. Common rice sells at head-quarters 17 seers 10 chitaks per rupee. Fodder and water sufficient.

Purnea.—Rainfall at Sadar 1·77. Transplantation of *aghani* paddy nearly finished. *Bhadoi* paddy and jute are being cut. Prospects good. Fodder and water sufficient. Cattle-disease prevalent in the Sadar subdivision. Common rice selling from 15 to 21 seers a rupee.

Cuttack.—Rainfall 5·95. Weather seasonable. Weeding and transplanting of rice crops continue. *Beali* rice in ear in places. Condition of cattle good. Fodder sufficient. Common rice sells at—

		Srs.	c.	
Sadar	20	6		
Jajpur	22	5		
Kendrapara	25	0	per rupee.	
Banki	22	0		

Hazaribagh.—Rainfall at Sadar 3·86, Giridi 1·44. More rain required in the Giridi subdivision. Transplanting of paddy about three-fourths completed. All crops promise well. Fodder ample. Common rice selling at Sadar 13 to 16 seers per rupee and at Giridi 10 to 14 seers per rupee.

General Summary.—General rain fell during the week, but, except in Orissa, it was usually light and below the average of the season in most of the districts. The transplantation of winter rice is still retarded for want of sufficient rain over a considerable part of the Burdwan and Presidency Divisions. More rain would be beneficial for transplanting purposes in some other districts. The *aus* rice and jute crops are being reaped, and the general outturn is expected to be fair. Prospects of the *bhadoi* crops in Bihar are generally satisfactory. In Champaran some damage to these crops has been caused by flood. Damage to crops from flood is also reported from Pabna and Dacca. Cattle-disease is prevalent in the Sadar subdivision of Purnea, and is also reported from the Basirhat subdivision of the 24-Parganas. The price of common rice continues generally steady.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

The total number of hours of bright sunshine		39·1
The maximum possible number of hours of sunshine		91·1
		°
The mean temperature of the seven days		82·7
The average temperature of the corresponding period for 24 years, Surveyor-General's Office		83·2
The extreme variation of temperature		14·7
The maximum temperature		90·4
		Miles.
The highest velocity of the wind in one hour		20
		%
The mean relative humidity		87
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office		86
		Inches.
The total fall of rain from 4th to 10th August 1895		2 13
The average fall of the corresponding period for 24 years, Surveyor-General's Office		2·28
The total fall from 1st January to 10th August 1895		23·51
The average fall of the corresponding period for 24 years, Surveyor-General's Office		38·61

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; p, passing temporary showers; t, thunder; ⛵, dew.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF JULY 1895.

THE main features of the weather during July have been—

(1) The settled weather which has prevailed over the Bay owing to the absence of cyclonic storms. Two shallow depressions formed in the north-west angle of the Bay and moved in the usual north-westerly direction across Orissa and the western districts of Chota Nagpur and Bihar, but they filled up very quickly after crossing the coast, and caused neither stormy weather nor very heavy rain during their passage across the country. The first formed about the middle of the month, the second at the end.

(2) The heavy rainfall in North Bengal and the adjacent part of Assam, as compared with the light and scattered showers which fell in the south and west of the province, especially during the first half of the month.

During the latter half of June, and also for a few days at the beginning of July, the monsoon current was diverted to the west across the north of the Bay towards the Orissa coast, with the result that much heavier rain than usual fell in these parts, while in East and North Bengal there was a marked absence of rainfall. During that time pressure differences from the normal were greater in the north of the province than in the north-west angle of the Bay, there being excess everywhere and the westerly tendency of the monsoon current, may be accounted for by that arrangement. This assumption is strongly supported by the changes which occurred during the second week of July. Instead of pressure being relatively low in the north-west angle of the Bay and the neighbouring districts, a ridge of high pressure formed over that area, while in North Bengal and Assam a shallow depression appeared. At the same time the monsoon current began to flow in its customary channel across the eastern districts into North Bengal and Bihar. Rainfall was at first heavier in East Bengal, with a small increase in North Bengal, but within a few days very heavy rain became general in Assam and North Bengal, and heavy showers fell in Bihar. When the monsoon current flows freely across North Bengal and Bihar heavy rain, such as fell at times during July, does not occur. A depression, shallow or otherwise, over the north of the province causes westerly winds in the west of Bihar, and these show that the moist current from the south-east must deposit a larger proportion of its moisture over the country where pressure is low. A low pressure area over the northern districts was a marked feature during many days in July, especially at the time when there was the reverse arrangement in the south-western districts and the north-west of the Bay.

On the 1st of the month the recovery from the effects of a disturbance at the end of June was almost complete. The pressure distribution was very nearly normal. The skies were clearing and temperature was rising everywhere. After the recovery of pressure and the return of comparatively settled weather, pressure changes were small for some days, but uniformity was a more distinct feature than usual, and a very shallow depression appeared over the central districts of Bengal. Round this depression winds took cyclonic directions, and the prevailing direction in Bihar was west instead of the easterly one usual at that time the year. In Lower Bengal conditions became more normal after the changes referred to above. Instead of being easterly as had been the case for some time, winds blew from the south, and the south or south-easterly directions in East Bengal indicated that the monsoon was beginning to follow its usual course. The effect on the rainfall was soon apparent, as during the first week the rainfall in East Bengal was normal and the defect in North Bengal was smaller than had been the case for some time.

The low pressure area, which was fairly well marked on the 2nd, was more distinct on the 3rd, and the centre of the wind circulation was in the east of Bihar. The distribution of pressure, however, was so uniform that the somewhat irregular changes that followed gave rise to local depressions and thunderstorms which were attended by irregular and in places heavy rainfall. This shallow depression continued to have an important influence on the weather in the north of the province for some days. It was slowly forced up against the hills, and the changes at Darjeeling and Gnatong were similar to those which attend the passage of a depression over stations in the plains.

The interaction between the easterly winds down the Assam Valley and the westerly winds from Bihar, continuing as it did for about a week, caused the very heavy rain of those days, and the thunderstorms which always follow the breaking up of even a shallow depression in mountainous regions, maintained the excessive precipitation for a day or two after the rise of pressure caused the depression to disappear.

During these days, that is up to the 10th, comparatively fine weather prevailed in Lower Bengal and Orissa. Showers were fairly general except in the 24-Parganas, Howrah, and Hooghly districts, where very little rain fell. The absence of rain in the south-western districts appears to have been due to the ridge of high pressure mentioned above, which maintained its position over Orissa and part of South-West Bengal from day to day. The

excess which appears to have been sufficient to stop rainfall to a large extent in the south-west was about ·05 inch, and the heavy rainfall in the north-east ceased soon after the shallow depression filled up in consequence of a rise of about ·07 inch.

The relatively low pressure area over the northern districts soon re-appeared with westerly winds in Bihar and heavy rain at the northern stations. There was generally considerable excess in all districts, but especially in Orissa and Bengal, and this began to give way steadily from the 15th, and culminated in the first disturbance of the month in the north-west angle of the Bay.

There was no sign of its existence on the 16th, but on the 17th winds became cyclonic on the Orissa coast. Gradients had become steeper in the south of the Bay and squally weather developed in the Circars and probably over the Bay between that part of the coast and the Burma coast opposite, while in North Bengal and Bihar the heavy rainfall had ceased. On the 18th the depression was more distinct near the South Orissa and Ganjam coasts, and the cyclonic circulation of winds extended over the whole province and the Bay. The fall of pressure was confined to Orissa, Lower Bengal and the north of the Bay, and changes were more than ·05 inch at the Orissa stations only. The centre of the depression crossed the coast south of False Point on the night of the 18th, moving in an almost northerly direction, and at 8 A.M. on the 19th it was not far from Balasore.

Pressure had fallen moderately at Balasore and at Midnapore, and slowly at the other south-western stations, while elsewhere the slow rise prevailed. The cyclonic winds continued, and gradients were moderately steep, both over the province and the Bay, but so far only light rain had fallen, and temperature remained above the normal over a great part of the province. On the 20th the low pressure area was more shallow and was over Chota Nagpur; on the 21st it was shown faintly over the west of Bihar, where pressure was lower than in the surrounding districts and the winds had cyclonic directions.

Instead of completely filling up, the depression continued to exist for several days, moving in an irregular way along a trough of low pressure lying near and parallel to the hills. On the 23rd the centre of the pressure distribution and of the wind circulation was near Bhagalpur, having moved during the previous twenty-four hours eastwards from the west of Bihar; on the 23rd it was over North Bengal. Its eastward movement then ceased, and again going westward it was over Bihar on the 24th, after which a brisk recovery of pressure led to more normal conditions. During the three days when the depression was over the northern districts, the strongish monsoon current which had been flowing northwards over the extreme east of the province was temporarily retarded by the depression, and the result was heavy rain in the northern districts, especially on the 22nd and 23rd. Pressure had been steadily falling over the whole province, and as gradients had become steeper over the Bay than had been the case for some time, rainy weather was general on the 23rd and 24th.

About the 25th a change set in; pressure rose briskly in the north of the province, and slowly in Lower Bengal, Orissa and the north of the Bay, while in the south-east of the Bay, there was a slow fall. The pressure distribution steadily became more uniform, and by the 27th there were signs of the formation of a depression over the north of the Bay.

On the 28th there was deficient pressure everywhere, but defect was more marked in the north of the Bay than over Bengal and in the south. While fine weather continued at the northern stations, strong south-westerly winds developed in the south of the Bay, and indications of a disturbance were more decided at Diamond Island, where the wind steadily strengthened and the sea became rough. The depression was so shallow that the irregular pressure change on the 29th caused a displacement of the central area towards East Bengal, but on the 30th larger changes followed, and a well-defined depression was shown over the north-west angle. Squally weather became general over the north of the Bay to within a short distance of the Sandheads, and as the depression moved into Chota Nagpur between the 30th and 31st, the strong winds and rough sea were soon felt at Saugor Island and along the Orissa coast. Like all the previous depressions of the present monsoon season, the one at the end of July was feeble and soon filled up after passing the coast. It caused rainy weather over the whole province, but the falls were generally light.

Pressure.—At the beginning of the month pressure was very nearly normal, but the higher readings soon developed and had an important influence on the rainfall distribution over the province. The ridge of high pressure formed over the south-western districts and the north-west angle of the Bay, while in the eastern and northern districts there was only a small excess. The low pressure area which formed after the middle of the month led to only a temporary reduction of pressure, but the steady fall which set in soon afterwards was followed by a considerable defect. There was, therefore, high pressure during the early part of the month, and low pressure in the latter half. Means for the month are in consequence very nearly normal over the whole province.

Temperature has been above the normal almost throughout the month in the south-west of the province, and generally below in North Bengal and Assam. The difference has been more marked in day temperatures than in those for the night. Mean maximum excess is about 1° in Lower Bengal, and more than half a degree in Orissa, Chota Nagpur, and Bihar, while mean defect is nearly 2° in North Bengal and nearly 3° in Assam. The difference in mean minimum temperature is rarely more than half a degree except in Assam, where it is just over 1°. Mean excess for the larger subdivisions is 0°·7 in Lower Bengal, Orissa, and

Chota Nagpur. Mean temperature is almost normal in Bihar, about half a degree below in North Bengal, and 1°·6 below in Assam.

Rainfall:—The area over which rainfall has been deficient includes the whole of Lower Bengal, small parts of Chota Nagpur and Bihar, and the greater part of Orissa. In North Bengal, North Bihar and the west of Chota Nagpur there has been excess, the greatest differences occurring near the hills. On the eastern side of the province the difference from the normal steadily changes from the south towards the north. Over the Sunderbuns there is defect of nearly 10 inches; in the part of East Bengal to the north of that tract there is defect of less than 5 inches. In North Bengal excess increases very quickly towards the north, the maximum excess being arrived at in Kuch Bihar, where it is over 30 inches. The rainfall over the hill parts of North Bengal was not so heavy, comparatively, as in the plains, there being a small defect at Darjeeling, and defect of 11 inches at Kalimpong. On the western side of the province there are greater irregularities owing to the influence of the two small storms which passed from the Bay across Orissa into Chota Nagpur. Generally the difference from the normal is less than 5 inches, except in the extreme north of Bihar, where excess varies between 5 and 15 inches.

Buxar received more than 70 inches; Fulbari, Dinhatta, Kuch Bihar nearly 60 inches; Alipur Duar and Dhubri more than 50 inches, and several other stations more than 40 inches. Local falls of more than 20 inches occurred in parts of the following districts of Bihar:—Shahabad, Champaran, Muzaffarpur, and Bhagalpur, but the usual amount was between 12 and 15 inches.

In parts of South-West Bengal, on the other hand, falls of less than 5 inches are recorded. These are chiefly in Hooghly, Howrah, and the 24-Parganas. In Burdwan, Birbhum, and Bankura the average fall is about 10 inches, and in the other districts of South-West Bengal between 5 and 10 inches. In East Bengal the falls are more irregular, varying from 5 inches in part of the Dacca district to over 20 inches in Chittagong.

The average fall in North Bengal is 23·21 inches, nearly 10 inches above the normal; in Bihar 14·65 inches with excess of 2·45 inches; in East Bengal and Chota Nagpur it is nearly 13 inches with defect of more than 3 inches in the former and only a quarter of an inch in the latter; in Orissa it is 9·86 inches, and in South-West Bengal 8·06 inches excess in the last being 3·94 inches.

The following table gives a comparison of the falls in the various divisions during the month of July with the normal fall, the actual being given as a percentage of the normal fall. The table also shows the actual falls for each of the previous months of the year expressed in the same way, and the last column of the table shows the total of the falls of the past seven months of the year in each division expressed as a percentage of the normal fall:—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	July.	Actual rainfall of first seven months of 1895 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	44	9	29	111	86	82	67	74
North Bengal ...	27	5	49	129	91	43	165	94
East Bengal ...	11	1	38	140	133	47	81	77
Bihar ...	71	88	34	129	70	72	120	96
Orissa ...	49	101	29	194	46	212	79	118
Chota Nagpur ...	66	52	71	418	70	109	98	101

The following table gives full data for the comparison of the actual and normal rainfall of the month of July in all districts of the province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past fifteen years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage; and the fourth column gives the same information in a slightly different form, expressing as a percentage how much the district rainfall varied in excess or in defect from the normal rainfall:—

Percentage Table for July 1895.

Division.	District.	Normal district rainfall for July.	Actual district rainfall July 1895.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (−).

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY THE 10TH OF AUGUST 1895.

DURING the early part of the south-west monsoon season there was an important deflection of the monsoon current westwards across the north of the Bay towards the Orissa Coast. Early in July a change occurred, and from being scanty in the north of the province, rainfall became very heavy there. The pressure conditions which maintained the rainfall in the northern districts continued throughout July, but in the week under review there has been a return to those of the latter half of June, that is, to low pressure and more heavy rainfall in the south-west.

At the beginning of the week, pressure changes were small and barometric readings were high everywhere, excess varying from ·02 inch in Orissa to nearly ·1 inch in the north-east of Bengal and the south of Assam. Very little rain was falling in Orissa and South-West Bengal, though elsewhere it was fairly general, and in parts of North Bengal heavy. A rapid fall of pressure began on the 5th, proceeding from the north east and moving slowly across the province to the south-west. On the 5th the greatest change was in North and East Bengal, on the 6th it was in Orissa, the Circars, and the adjacent part of the Bay, over which area a shallow depression appeared. This depression was fairly well marked on the 6th, and was causing a regular cyclonic circulation of light winds over the Bay and the province. The greatest defect was only ·15 inch at Cuttack, but gradients were moderately steep over the Bay, and there was a slow increase of wind velocity at Diamond Island. On the 7th the centre of the depression was near Balasore, after which it moved to the westward, and by 8 A.M. on the following day it had passed out of the province.

Up till the 6th very little rain fell in the south-western districts, and there was still general rain in the north, especially on the 6th in North Bengal. The effect of the depression now became apparent. Heavy rain began in Orissa, and the falls in North Bengal were light on the 7th and scattered on the 8th. In the central parts of the province there was very little change, as the rainfall continued light almost throughout the week.

The westerly movement of the depression was followed on the 8th by a rapid rise of pressure in the north-west angle of the Bay, and by a moderately large increase over the whole province, except in the west of Bihar. Gradients were still steeper than usual over the land, because of a defect of ·08 inch in Chota Nagpur and excess of ·07 inch in North Bengal and Assam. The general motion of the air was therefore from the east, and heavy rain continued in Orissa. It was also more general in Lower Bengal and Chota Nagpur, but this monsoon weather which followed the depression was of very short duration. Pressure continued to rise rapidly in the west on the 9th, and by this time there was excess of ·05 inch in Orissa and Bihar. At the same time a fall had begun over the south of Burmah, and readings there were slightly in defect. The distribution that resulted was uniform, and the strong winds which blew on the Orissa Coast on the 8th and 9th moderated quickly. Rainfall became light and scattered over a great part of the province, and temperature, which was about 2° below the normal on the 9th, was between 1° and 2° above on the 10th. The falling pressure over the south of Burmah continued on the 10th and caused a shallow depression there, while over Bengal and the north of the Bay the distribution was again more uniform, and light variable winds with scattered rainfall prevailed.

Pressure was above the normal at the beginning of the week, but the fall which prevailed for the first few days soon led to considerable defect, the greatest being in Orissa, near which the shallow depression formed. The rapid rise which followed on the 8th and continued on the 9th restored the distribution to what it was at the beginning of the week. On the 10th, the last day of the week, it was again falling, and readings were very nearly normal, the greatest excess being ·05 inch in Chota Nagpur. Means for the week are very nearly normal in all districts except in Orissa, Chota Nagpur and South-West Bengal, where there is defect of about ·04 inch.

Temperature was almost normal at the beginning of the week, with a small excess at most places, except in North Bengal and Assam, where there was a small defect. There was little change till the showery weather due to the depression became prevalent, and then temperature fell slowly over the whole province, the greatest defect being 2° on the 9th. The sky cleared quickly before the end of the week, and there was again excess on the 10th. Means are very nearly normal, the greatest differences for the larger divisions being excess of a third of a degree in North Bengal and defect of the same amount in Bihar.

Rainfall.—Heavy rain fell in Orissa on the 7th and 8th, and passing showers were fairly general throughout the week, except in the south-western districts at the beginning and in the north of the province towards the end. Orissa received 6·28 inches, more than double the normal, but all the other districts are much below the usual amount, except Bihar, where defect is only a quarter of an inch. In Chota Nagpur defect is 1 inch, in South-West Bengal 1·38, North Bengal 1·55, and East Bengal 2·11 inches.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 10th of August 1895 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week			Rainy days.			Since 1st of month.		Since 16th May 1895.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 *and* 1892.

The Council met at the Council Chamber on Saturday, the 3rd August, 1895.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding.*

The HON'BLE SIR GRIFFITH EVANS, K.C.I.E., Offg. Advocate-General.

The HON'BLE H. J. S. COTTON, C.S.I.

The HON'BLE D. R. LYALL, C.S.I.

The HON'BLE J. A. BOURDILLON.

The HON'BLE C. E. BUCKLAND, C.I.E.

The HON'BLE H. H. RISLEY, C.I.E.

The HON'BLE R. C. DUTT, C.I.E.

The HON'BLE RAI DURGA GATI BANERJEA BAHADUR, C.I.E.

The HON'BLE NAWAB SYUD AMEER HOSSEIN, C.I.E.

The HON'BLE SURENDRANATH BANERJEE.

The HON'BLE MAHARAJA SIR LUCHMESSUR SINGH BAHADUR, K.C.I.E., of Darbhanga.

The HON'BLE MAHARAJA JAGADINDRA NATH ROY of Nator.

The HON'BLE MAULVI MUHAMMAD YUSUF KHAN BAHADUR.

The HON'BLE C. E. SMYTH.

The HON'BLE A. M. BOSE.

The HON'BLE RAI ESHAN CHUNDER MITTRA BAHADUR.

The HON'BLE GURU PROSHAD SEN.

NEW MEMBERS.

The Hon'ble NAWAB SYUD AMEER HOSSEIN and the Hon'ble BABU GURU PROSHAD SEN took their seats in Council.

THE FORESHORE AT AZIMGANJ.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

"(*a*).—Is the Government aware that the District Collector of Murshidabad has acquired the zamindar's rights in the foreshore at Azimganj with the object of conferring upon the East Indian Railway exclusive rights in the foreshore and the river bed at Azimganj, to the exclusion of all other persons, including the Calcutta Steam Navigation Company, although the foreshore had always been used as a public towing-path and as a public landing place even before the construction of the railway, and although the river Bhagirathi is a navigable river and its bed is therefore inalienable public property?

"(*b*).—As the river Bhagirathi is under the operation of the Canal Act (V of 1864, B.C.) and is under the charge of the Public Works Department, was the transfer of the foreshore and bed of the river at Azimganj to the East Indian Railway made with the consent of that department?

"(*c*).—Is it a fact that, in order to enforce the exclusive rights which it was attempted to confer on the East Indian Railway and to the prejudice of the Calcutta Steam Navigation Company, the District Magistrate issued the following notice and had it proclaimed by a crier:—

"'NOTICE.

"'Notice is hereby given to the public that the foreshore land of Azimganj has been taken over by the East Indian Railway Company. No country boat nor any steamer should moor alongside that foreshore land in such a way as to cause obstruction to the mooring of the ferry steamer of the railway company of that place.'

"Does the Government approve of these proceedings? What action does the Government intend to take in regard to this matter and with a view to prevent serious injury to the interests of the Calcutta Steam Navigation Company, which has done excellent public service in improving the means of communication in Bengal, by forbidding the Company the use of navigable rivers and public landing places?"

The Hon'ble MR. COTTON replied:—

"Enquiry is being made into the subject of the Hon'ble Member's Question, and the result will be communicated to him in due course."

ALLEGED ISSUE BY MR. HEARD, SUBDIVISIONAL OFFICER OF DEOGHUR OF NOTICES BEARING THE SEAL OF HIS COURT DEMANDING A FREE SUPPLY OF PROVISIONS.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

"Has the attention of the Government been drawn to an article in the *Hitabadi* newspaper stating that Mr. Heard, the Subdivisional Officer of Deoghur, is in the habit of issuing notices bearing the seal of his Court, demanding a free supply of provisions, such as fowls, eggs, goats, sheep, &c., and that whenever he gets more than what he wants himself, he causes the surplus to be publicly sold to the highest bidder by the *Nasir* of his Court?

"Will the Government be pleased to institute an enquiry with a view to ascertain the truth or otherwise of these serious allegations, if it has not already done so?"

The Hon'ble MR. COTTON replied:—

"Enquiry is being made into the subject of the Hon'ble Member's Question, and the result will be communicated to him in due course."

CALCUTTA ELECTRIC LIGHTING BILL.

The Hon'ble MR. COTTON moved that in sub-section (1) of section 5 of the Bill to facilitate and regulate the supply of electricity for lighting and other purposes in Calcutta, the words "regulations and" be inserted after the word "such" and before the word "conditions."

He said:—"These words seem to have slipped out of the Bill by oversight. They are contained in the corresponding section of the English Act, and are necessary with reference to sub-section (4) of section 3 of the Bill, which, it will be observed, contemplates that the license may make regulations as well as conditions. This omission was discovered when I was lately considering the Act with the assistance of the Secretary to the Legislative Department. The amendment merely supplies an omission in drafting."

The motion was put and agreed to.

The Hon'ble MR. COTTON also moved the following amendments in section 12:—

That in sub-section (*1*) of section 12 the words "open or" be inserted after the word "to" and before the words "break up";

also that the words "bridge, sewer, drain or tunnel" be inserted after the word "tramway" and before the words "without the consent of";

also that the words "bridge, sewer, drain or tunnel" be inserted after the word "tramway" and before the words "is repairable."

He said:—"These amendments are moved with reference to the observation made by my hon'ble friend, Mr. Anundo Mohun Bose, at the last meeting of the Council, when he pointed out that the word 'bridge' as well as 'drain and tunnel' found a place in section 6 and subsequent sections of the Act, but were omitted in section 12. Sections 6 to 11 of the Bill were all adopted from the Gas Works Clauses Act, and are intended to give power to the undertakers under certain conditions to open and break up streets, railways, tramways and bridges, and to open and break up any sewers, drains or tunnels within or under such streets, railways, tramways and bridges. In order to make these sections as complete as possible, we went, in drafting this Bill, somewhat beyond the provisions of the Gas Works Clauses Act, and provided that they should relate to streets, railways, tramways and bridges, as well as to sewers, drains and tunnels. Section 12 requires the undertakers to obtain the consent of the authority by whom such streets, &c., may be repairable. It was drawn up in exact conformance with the English Act, but the words 'bridges, sewers, drains and tunnels' were omitted. I am disposed to agree with my hon'ble friend that it will make the section more complete if these words were inserted. I therefore move these amendments in section 12 thereby bringing it into exact conformity with the preceding sections."

The Hon'ble MR. A. M. BOSE said:—"I have to thank the hon'ble member in charge of the Bill for accepting the amendment which I suggested on the last occasion. The addition of the words now proposed will not only remove an anomaly, but will provide a safeguard against the breaking up of bridges, drains and tunnels without the previous consent of the authority by which they are repairable."

The motion was put and agreed to.

The Hon'ble MR. COTTON moved that the Bill, as now settled by the Council, be passed. He said—

"I think it will be found a practical and workable measure, well calculated to effect its object, which is to facilitate and regulate the supply of electricity for lighting and other purposes. I take this opportunity of assuring the hon'ble members of this Council, and in particular my hon'ble friend, MR. SMYTH, the representative of the Bengal Chamber of Commerce, whom I desire to thank for the valuable assistance he rendered while the Bill was under consideration in Select Committee, that the licenses and the rules and

regulations which will be framed under this Bill will receive the most careful attention and consideration of the Government in the Public Works Department with a view of meeting the convenience both of undertakers and of the public."

The motion was put and agreed to.

BILL TO AMEND THE CALCUTTA PORT ACT, 1890.

The Hon'ble MR. RISLEY moved that the Report of the Select Committee on the Bill to further amend the Calcutta Port Act, 1890, be taken into consideration in order to the settlement of the clauses of the Bill, and that the clauses of the Bill be considered in the form recommended by the Select Committee.

He said:—"As the Report of the Select Committee has been circulated to all the members of the Council, it is unnecessary for me to add anything material to it. The Bill as it stands now, as I have already said, practically embodies the agreement come to between the parties most concerned, namely, the Port Commissioners and the Corporation of Calcutta. The form of the Bill has been determined by the legal advisers of those two bodies, and it has been put into the form in which it stands mainly with the object of saving the persons from whom the taxes and other charges will have to be collected from the inconvenience and annoyance of having to make several separate payments. That is the reason why the rates will be collected by the Port Commissioners and paid over to the Corporation by them. As regards the amendment, which my hon'ble friend, the member for the Corporation, has brought forward, I had the advantage of discussing it with him and also with a representative of the Port Commissioners, and I suggested that the object of the amendment, would be sufficiently met by adding to section 66M the words 'the first month of.' The section will then read 'the Commissioners shall during the first month of each succeeding quarter pay to the Corporation, &c.' That I understand has been accepted both by the Port Commissioners and the Calcutta Corporation. It will give the Port Commissioners a month within which to pay the rate which they would have to collect with the rent payable by their tenants. I move this amendment on the understanding that my hon'ble friend, BABU SURENDRANATH BANERJEE, is willing to accept it."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"I gladly accept the amendment proposed by my hon'ble friend, the member in charge of the Bill. It is in the nature of a compromise which, I think, will meet, so far as is practicable under a compromise, the interests of both parties. In accepting this amendment, I desire to thank my hon'ble friend and the Government for the promptitude with which they have introduced this Bill in response to an appeal which I made to the Government in April last. Owing to a legal difficulty the Corporation cannot assess basti lands, the property of the Port Commissioners, and it loses about Rs. 20,000 a year. The object of this Bill is partly to remedy this state of things."

The motion was put and agreed to.

The Hon'ble MR. RISLEY moved that the Bill as amended be passed. He said:—

"I do not think any further comment is necessary. It is essentially a Bill to which all parties interested have consented, and there is every reason to hope that it will work smoothly."

The motion was put and agreed to, and the Bill was then passed.

BILL TO REPEAL THE BHUTAN DUARS ACT, XVI OF 1869.

The Hon'ble MR. BUCKLAND said:—"It will be in the recollection of the Council that when I introduced this Bill to repeal Act XVI of 1869 four weeks ago in this Council, I stated at sufficient length the nature of the Act which

it is proposed to repeal, its temporary character, and our objects and reasons for repealing it. It will be unnecessary for me to go over the same ground again. The Bill was referred to a Select Committee in the form in which it was introduced, and has passed through the Select Committee without any material alteration. The Select Committee came to the conclusion that, the object being to repeal Act XVI of 1869, the Bill which had been drafted carried out that intention fully and completely; it was therefore unnecessary for the Select Committee to make any but a verbal alteration in the clauses of the Bill. I have therefore to move that the Report of the Select Committee on the Bill to repeal the Bhutan Duars Act, XVI of 1869, be taken into consideration in order to the settlement of the clauses of the Bill, and that the clauses of the Bill be considered in the form recommended by the Select Committee."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"I desire to congratulate the Government on the introduction of this Bill. It will be in the recollection of hon'ble members that in January 1894, I put a question with reference to this matter, and I asked my hon'ble friend whether the Government would repeal Act XVI of 1869 in the Bhutan Duars. The hon'ble member in charge of the Bill was understood to give a favourable answer. He said that the matter was under the consideration of the Government, and I take it that this Bill is the outcome of those deliberations. But I should have rejoiced if the scope of the legislation now undertaken were a little further extended by the repeal of Act X of 1859 in the regulation portion of the Jalpaiguri district. I put a question in Council in this connection. An error had unfortunately crept into that question, of which the hon'ble member in charge of the Bill took advantage, and indulged in a pleasant retort. He said there was no rent law in force in the non-regulation portion of the Jalpaiguri district. That is quite true. But Act X of 1859 is in force in what is known as the regulation portion of the Jalpaiguri district. I would appeal to the Government to complete the scheme of beneficent legislation upon which it is embarked, by consenting at no distant day to repeal Act X of 1859 in the regulation portion of the district. That Act is not working satisfactorily—that is the universal complaint, the universal opinion of officials and non-officials. So far back as the year 1879, the District Judge of Rangpur took this view of the matter. Lord Ulick Browne, who was Commissioner of the division from 1877 to 1885, was opposed to the continuance of the Act, and I believe Mr. Nolan, the present Commissioner, is of the same opinion. The people presented a petition in favour of the repeal of the Act in 1891. Having regard to this strong expression of opinion coming from so many different quarters, I hope and trust Your Honour will see your way to repeal Act X of 1859 in the regulation portion of the Jalpaiguri district. I hope my hon'ble friend in charge of the Bill will be able to give us an assurance to that effect."

The Hon'ble MR. BUCKLAND said:—"The speech of the hon'ble member who has just sat down has come upon me as a surprise. The question of the repeal of Act X of 1859 in the regulation portion of the district of Jalpaiguri is not the question before the Council at the present moment. It is a matter for consideration and reference to previous reports on the subject, and to the local officers before any such action can be taken. At the same time I wish to point out that the hon'ble member, while asking for the repeal of Act X of 1859 in the portion of the Jalpaiguri district to which this Bill does not apply, has not in any way suggested what law he would like to take the place of Act X of 1859. It has been under the consideration of Government whether in the tract of country, for which we are now legislating, we should introduce Act X of 1859, or the Bengal Tenancy Act, and, after mature consideration, we came to the conclusion that the tract is not ripe for the introduction of the Bengal Tenancy Act. And further, as regards the older portion of the district, we have had no cause to consider the question of repealing an Act which has long been in force and which, as far as we are aware, is working very well. The question not being before the Council at this moment, and no substantive amendment having been proposed, there is nothing, as far as I can see, to vote upon, and it is quite premature for the Government to make any promise whether Act

X of 1859 can be repealed in a portion of the country for which we are not now legislating.

THE HON'BLE THE PRESIDENT said:—"I may add to what has just been said by the hon'ble member, the Secretary in the Revenue Department, that the question of repealing Act X of 1859 is not only not now before the Council, but it will never be. If the Government consent at any time to withdraw that Act from what is known as the regulation portion of the Jalpaiguri district, and to introduce another Act in its place, it will be open for the Government to do so under the Scheduled Districts Act with the sanction of the Government of India. The remarks of my hon'ble friend, as to the unsuitability of this Act to the district in question, will be borne in mind, and if any proper and suitable representations come before the Government, showing the unsatisfactory working of the Act, and that any other Act would work more suitably, I can undertake that the Government will at some future time accept those representations, and give them their best consideration. But as I have said the question of repealing Act X of 1859, so far as its application to the Jalpaiguri district is concerned, will not come before this Council.

The motion was put and agreed to.

The Hon'ble MR. BUCKLAND moved that the Bill be now passed.

The motion was put and agreed to, and the Bill was then passed.

THE BENGAL SANITARY DRAINAGE BILL.

The Hon'ble MR. LYALL moved that the following be substituted for sub-section 2 of section 35 of the Bill to facilitate the construction of drainage works for improving the sanitary condition of local areas:—

"(2) The Local Government shall, before making, altering or repealing rules under this section, publish a draft of the proposed rules and alterations, and a notification of the proposed repeals in three consecutive numbers of the *Calcutta Gazette*, and shall specify a date not less than one month from the date of publication, at or after which such draft and notification will be taken into consideration.

"(3) The Local Government shall receive and consider any objection or suggestion which may be made by any person with respect to such draft and notification before the date so specified.

"(4) Every rule so made or altered, and every repeal of any such rule under this section shall be thereafter published in the *Calcutta Gazette*."

He said:—"This amendment is proposed in accordance with what passed in the Council a fortnight ago. The clause has been redrafted by the Secretary in the Legislative Department."

The Hon'ble MAHARAJAH SIR LUCHMESSUR SINGH BAHADUR of Darbhanga moved that the discussion upon this Bill be postponed for three months, inasmuch as the Bill has been so altered in Select Committee that it is desirable that the Bill be republished in order to afford an opportunity for such public bodies as the Chamber of Commerce, the British Indian Association, the Indian Association, and other Associations to express their views on the Bill as it has been revised.

HIS HONOUR THE PRESIDENT said:—"I think it will be more convenient if the hon'ble member would bring forward this amendment at the next stage of the Bill, when the motion for the passing of the Bill is before the Council. What is now before the Council is merely an amendment proposing some small alterations in the wording of a particular clause."

The Hon'ble MAHARAJAH SIR LUCHMESSUR SINGH intimated his acquiescence in the remarks made by His Honour the President.

The Hon'ble BABU SURENDRANATH BANERJEE called the attention of the Council to the wording of section 11 of the amended Bill as it was laid on the table. A mistake had apparently been made in the drafting. The section,

as it was now worded, did not correctly carry out the compromise which was accepted by the Council on my motion.

THE HON'BLE THE PRESIDENT said:—"The hon'ble member's remarks are quite justified. The alteration which has been made in the wording of the section does not carry out the intention of the Council, and I will see that it is properly carried out before the Bill is finally passed. It has been settled by the Council that section 11 will be amended as follows, namely, that the number of members who are to be present at a special meeting of the District Board, when a preliminary scheme is adopted or rejected, shall be not less than one-half of the whole number of members on the Board, and that the votes of not less than two-thirds of the members so present shall be necessary to the adoption or rejection of the scheme when they overrule the opinion of the Drainage Commissioners."

The Hon'ble MR. LYALL'S amendment in sub-section (2) of section 35 was put and agreed to.

The Hon'ble MR. LYALL said:—"In moving that the Sanitary Drainage Bill be passed, I desire to place before this Council, as shortly as possible, a history of the Bill I now ask should be passed, and to state what advantages may be expected from the passing of such a Bill.

"The Bill, as the Council are well aware, is one of the results of the Belvedere Conference held so long ago as the 18th July, 1892. The resolutions then passed have been carried out so far as municipal areas are concerned in the additional sections 37A to 37K embodied in Act IV (B.C.) of 1894 which was passed last year. These sections enable action to be taken when the initiative is assumed by a municipal body, and provides for the joint action of the local authorities having jurisdiction over rural areas.

"The Bill now before us is the counterpart of that Bill, and provides for the initiative being taken by the rural local authority.

"It has been before this Council since the 9th of February 1894. It has been twice referred to a Select Committee and has been twice criticised by every public body in Bengal. The Bill as now amended differs in many details from that originally laid before Council, but its scope is the same.

"I do not propose to detain the Council by going into the details of the Bill, but there are a few points to which I would desire to draw notice. The first is the initiation of the scheme. This point has been the subject of much discussion. At the Belvedere Conference the majority were in favour of leaving the entire decision to the District Board, and this has been carried out in the Bill now before us, but combined with provisions which enable local public opinion to be fully consulted.

"Local interests are further safeguarded by the appointment of local representatives as Drainage Commissioners. If local opinion is against any scheme, it can only be adopted by the District Board at a special meeting at which at least half the number of the Board are present and by a majority of two-thirds of this number. Even after this, the Local Government has the power of veto. I was one of those who voted in the minority at the Conference, and I hold that the safeguards provided in the Bill are ample to prevent the possibility of a scheme being carried out contrary to the wishes of the people concerned and who will have to pay for it.

"I desire in the next place to say a few words regarding the probable working of the Bill after it has passed into law. I have seen fears expressed that officers enthusiatic for sanitation will propose schemes costing much money and involving a hopeless contest with the forces of nature.

"I think the Council need have no fear of such results. In the first place there would be strong, and probably successful, local opposition to any such scheme, and even if such a scheme did come up, the Local Government would certainly veto it.

"But when rivers change their courses under the operation of natural causes, and the old courses cease to be main drainage channels, people are apt to forget that these channels had a double duty to perform, and that in addition to being main drainage channels they were also local drainage channels. The

beds of these dead rivers generally become fit for cultivation, and the greater part can be cultivated without danger, but the ordinary zamindar, talukdar, or raiyat knows little or nothing of the functions which the bed of the river still has to perform, and in such cases we generally find that the whole bed is cultivated.

"The result naturally is impeded drainage and deterioration in the public health, and until now there has been no law under which this action could be prevented. The Penal Code in section 268 requires that in order to constitute an offence the damming of small streams must cause common injury, danger, or annoyance to the people in general or to individuals. Now, injury to public health is not the immediate result of damming a river or cultivating its bed; the result follows slowly, probably years after, and the High Court decided in the Chittagong cases in 1893 that a conviction under section 268 could not be maintained when the result was so remote. The leading case for years as regards the power of the Magistrate to issue executive orders in such cases under the Procedure Code has been the judgment of a Bench presided over by the late Mr. Justice Morris, and when the Belvedere Conference was held that was the leading case, and Magistrates were thus unable to take action either judicially or executively. Since this Bill has been under discussion, I am glad to say that the High Court have come to another decision, and have upheld the action of the Magistrate of the 24-Parganas as regards the Soonti river. Section 27 of the Bill the Council are now asked to pass is therefore in accordance with the latest case law on the subject and makes it clear that a Magistrate has the power to prevent obstructions being placed in drainage channels and to order their removal. At the time of the Permanent Settlement all water-courses were exempted from assessment. The zamindars have therefore no ground for complaint, as they pay no revenue for such lands and in fact gain free of assessment all the land not required to be kept open for a drainage channel. This principle is to some extent embodied in section 16 of the Bill, and recent encroachments will be removeable without compensation. Where limitation has accrued it is proposed to give compensation under the Land Acquisition Act in force for the time being. The Bill now before Council, though capable of being extended so as to provide for larger schemes, is also capable of being utilized for smaller schemes, and its chief usefulness in my opinion will lie in its judicious application to such schemes. In fact, I look on it as mainly a Bill to prevent the further deterioration of the drainage of Bengal, and to improve it when it can be done at a small cost, and in confirmation of this view I would point to what has been done in one or two cases and also what can be done. The first case is that of the Soonti river in the 24-Parganas which I have above referred to. The Council are all aware how unhealthy Baraset has become of late years, and in 1883 an elaborate scheme under the Drainage Act for the drainage of the Dhokera Bil and the improvement of the Soonti and Nomye rivers was drawn up, the estimated cost being Rs. 4,78,068. The proprietors very naturally would not agree to this, and the scheme was dropped.

"On receipt of letter No. 894, dated the 13th March 1893, from the Sanitation Branch of the Bengal Office, the Magistrate of the 24-Parganas undertook a series of petty improvements in the Soonti river. In the year 1893-94, nine miles of the bed were cleared by the removal of 40 bunds and fishing weirs and the clearing of trees and other obstructions from the channel. The cost was Rs. 1,039, of which Rs. 400 were paid by the Baraset Municipality and the balance by the District Board. In the following year 1894-95 a further distance of ten miles was similarly cleared at a cost of Rs. 938. The District Engineer reports, under date 22nd June, that 'the health of the locality had much improved, and the water of the nadi which was filthy before is now used for drinking purposes,' and again he says, 'the drainage of the adjacent tract has much improved, and the villagers alongside now enjoy better health.' This is an instance of what has been done executively and without a law such as we are now asked to pass, but the Council must remember that the success or otherwise of the action of the Magistrate entirely depended on the view taken of it by the High Court, and that had the old decision of Mr. Justice Morris been upheld, the Magistrate would have been powerless. The law the Council are now asked to pass will place the legality of such action beyond doubt, and

I hope to see many such schemes worked out by the joint voluntary action of District Boards and Municipalities and without additional taxation.

"The Eden Canal is an instance of more extensive works, which the Council are no doubt all familiar with, and I need only say here that the opening of that canal and the improvement in the drinking water and drainage affected by it were followed by a marked amelioration of the health of the places on the river bank.

"There are many places in Bengal where improvements can be carried out on lines similar to one or another of the two cases just mentioned. I hold in my hand a paper which has been circulated to all members of Council containing a note by the late Magistrate of Dinajpur, Mr. Tute, showing how the drainage of that very malarious district can be improved at a very small cost following the lines of the action taken by Mr. Collier in the case of the Soonti river. Another scheme about to be carried out by the Irrigation Department at the joint expense of the Local Government and the District Board is the canalisation of the dead river Kousiki in the Hooghly district. This is more on the lines of the Eden Canal, and will be supplied with water from that source. This is another case where the work will be carried out without taxation at the joint expense of Government and the Local Board, and no doubt many similar cases will occur.

"I do not propose here to say more than a very few words on the subject of the assessment of cost. That was fully discussed a fortnight ago. That discussion has been the subject of considerable comment in the press, and the Government of Bengal and this Council have been twitted with their inability to devise a collecting machinery which will secure the realisation of the costs of the scheme from all who benefit, but none of our critics have supplied us with a better scheme. We assert that the number of those who will benefit by any drainage project who do not pay Road Cess is so small that the amount they would pay under any of the alternatives proposed would be more than swallowed up in the cost of collection. The rate, it must be remembered, is a temporary one, extending at the outside to 30 years; and Government has rightly declined to establish a new collecting machinery for a temporary purpose when an existing machinery existed capable of doing the work easily and cheaply and with a minimum of annoyance to those who pay.

"I do not, Sir, expect any great or sudden changes from the passing of this Bill. Just as the deterioration of drainage takes time, and its effects on the public health are not felt for years after the mischief has begun to act, so the improvement of drainage will, in most cases, be a work of time, though experience has shown that improvements have a more rapid effect than impediments.

"The passing of this Bill will place a strong weapon in the hands of those responsible for the health of the province—a two-edged sword in fact which will cut both ways,—in one way to facilitate the removal of existing obstructions, and in the other to prevent new obstructions being created.

"I do not anticipate any extensive use of the penal clause of the Bill. The fact of the existence of such a clause will have the effect of preventing the obstruction of drainage in the future.

"I ask the Council to pass this Bill, not as a perfect Bill, but as an honest attempt to do all possible to reduce the malaria which is the bane of the alluvial districts of Bengal by removing to some extent one of the chief causes of that malaria."

The Hon'ble MAHARAJAH SIR LUCHMESSUR SINGH BAHADUR of Darbhanga said:—"I beg leave to move that this Bill be referred back to the Select Committee, or at all events that the final consideration and passing of the Bill be postponed for three months. The hon'ble member in charge of the Bill has admitted that the Bill itself is not a perfect Bill. Well, nothing in this world is perfect, but I think if some little time were given to local bodies to submit their opinions upon the revised Bill, we shall be getting a little nearer pefection than we are at present. The Bill has been so altered by the Select Committee that I think no harm can possibly be done by our delaying the passing of the Bill for a period of three months. No scheme of drainage can be taken in hand during the rainy season, and if any schemes of drainage or for the clearing out of silted rivers are in contemplation, they cannot be taken in hand

before the cold weather; so that practically there will be no harm done to any scheme whatever by postponing the discussion upon this Bill for three months."

The Hon'ble MR. RISLEY said:—"With your Honour's permission, I will take this opportunity of examining certain allegations which have been made regarding the supposed moral obligations of the Government in respect of the financial portions of this Bill. These allegations have been made and answered before. I wish I could think that they would not be made and answered again. Still, as memories are short, shorter perhaps here than elsewhere, and circumstances change, more rapidly perhaps here than elsewhere, it may be well that I should answer them again, framing my answer to fit the present state both of the facts and of the law. I take them in the form in which they were put forward by the Hon'ble Surendranath Banerjee at the last meeting of Council but one. He said: 'The proceeds of the road-cess have been charged with works which formerly had been carried out either from Imperial or from Provincial Funds.' As a statement of fact that is beyond criticism; it describes precisely what has happened. I may add that it describes what ought to happen, and what must happen if the natural development of the country is not to be artificially retarded. The imputation underlying the statement that Government has by some juggle unfairly shifted a financial burden, is absolutely without foundation. Let me go back 15 years, to 1880, when what is now the Cess Act was under discussion in Council. The Hon'ble Kristo Das Pal then moved that a proviso should be added to the Bill to the effect that no work then charged to Provincial Funds should be made a charge on the District Road Fund. In opposing that motion, which was negatived without a division, the hon'ble Mr. Mackenzie said several things which deserve to be remembered. He pointed out that the motion would restrict the administrative discretion of the Lieutenant-Governor, who was 'not as yet reduced to the position of a much-badgered Chairman' of a Corporation, and that it was inconsistent with the fact that although for various reasons the management of certain sources of revenue is transferred to local bodies, the ultimate responsibility for local taxation rests with the Government, and in the last resort it must determine whether any particular charge is equitable. I commend what was said on these questions of principle to all those who hold with the hon'ble member. For my present purpose it is sufficient to dwell on another point. In the speech I am quoting, Mr. Mackenzie said it was impossible to draw a hard-and-fast line of distinction between district roads and provincial roads. He went on to enumerate the chief roads then recognised as provincial. They were the following:—

1. The Grand Trunk Road to the North-Western Provinces and its branches.
2. The Orissa Trunk Road and its feeders.
3. The Chota-Nagpur system.
4. The Calcutta and Jessore Road.
5. The Calcutta and Diamond Harbour Road.
6. The Ganges and Darjeeling Road.
7. The South-Eastern Trunk Road, Dacca to Chittagong.
8. Certain Calcutta roads.
9. Certain frontier roads.

He added: 'There is, so far as I know, no present intention of reducing their number or of transferring them to District Committees; but there is hardly any of the first eight of the series that might not, as regards some part or other of it, form a perfectly fair charge on local funds.' That was 15 years ago, but things have moved so fast, that by the present time the whole or large portions of several of these roads have already been transferred to local bodies, their place having been taken by railways, and as soon as other projected railways are open the remaining roads will go the same way. In each case of transfer, however, a sufficient grant has been made to the District Boards or Road Committees to enable them to maintain the roads to the extent required for local purposes. Now suppose Kristo Dass Pal's motion had been carried, what would have been the result? The Government would have been unable to transfer the control of

these roads, nor could it have made any grants for their maintenance. For through communication they would have ceased to be of any use; for local purposes they would still have been of great value. The Government would have been in the hopeless dilemma that it must either keep up great lengths of road running parallel to railways, and not wanted as main lines of communication, or else it must allow those roads to fall to pieces. That it should have maintained them or rather bits of them, as *local* roads is obviously out of the question. It would be absurd and intolerable that Government should keep up an establishment, alongside of the district road establishment, to look after a number of scattered sections of local roads, because its hands were tied by a ridiculous proposal. In a word, the principle 'once a provincial road always a provincial road' which Kristo Dass Pal endeavoured to introduce, and which the hon'ble member has recently attempted to revive, would have produced great administrative inconvenience and great waste of public money. It would have been an obstacle to the advance of Local Self-Government, and, what is worse, immeasurably worse, it might even have hindered the development of railways. There is literally nothing to be said for it from any point of view.

"In connexion with this question of the road cess, a second allegation has been made. It is said that in a certain despatch the Duke of Argyll laid down the principle that 'the road cess, which was levied on villages, should be primarily devoted to the sanitary improvement of those villages.' The Hon'ble Member describes this despatch as a memorable document. So it is, though perhaps, hardly for the reason assigned by the Hon'ble Member. I will read the entire passage.

22. "* * * * I have already pointed out that the purposes to which a tax may be applied cannot be considered as affecting the abstract right of the Government to exact it. But assuming this right, everything as regards the policy and even the justice of the rates now in question, turns upon the manner in which they are to be expended. It is, of course, essential that the Government of India should be itself satisfied that it is breaking no faith in any measure it may take; but next to the necessity of this assurance is the necessity, or at least the great importance, of making the same conclusion plain to the apprehensions of the people. For this purpose it is, above all things, requisite that the benefits to be derived from the rates should be brought home to their doors,—that these benefits should be palpable, direct, immediate.

23. The making and improving of wells, tanks and other works of irrigation affecting comparatively small areas of land, are the operations which probably best comply with these conditions. But roads are a first requisite in the improvement of every country, and although as yet they may not be equally valued by the people, it is the duty of the Government to think for them in this matter, and the benefits they must derive will yearly become more apparent to themselves." * * * *

"I must say, taking that passage as a whole, I cannot think its purport has been correctly understood by the Hon'ble Member. The writer of the despatch is clearly trying to put himself in the position of the Indian agriculturist as he conceives him. He says therefore in effect—petty irrigation works are best calculated to make the raiyat see that he gets something for his money. 'But,' he goes on, 'roads are a first requisite.' In fact, what the Duke of Argyll says is that the road cess should be primarily devoted to roads, though it might be politic to spend something on irrigation. About sanitary improvement there is not a word, nor would one expect to find much in a despatch of that date.

"I have shown, Sir, that the Duke of Argyll did not in fact say what the hon'ble member says he did. But even if he had said that, I do not see that it would have made any difference. A famous legal member commented once on the state of chaos that had arisen in a certain non-regulation province from the practice of legislating by executive order. An even worse chaos would set in if specific provisions of laws in force at the present day were liable to be modified by casual suggestions thrown out in despatches a quarter of a century old.

"The above remarks dispose of the allegation that the receipts on account of road cess are diverted from their legitimate objects. Those receipts have now in most districts become merged in the District Fund under the provisions of the Local Self-Government Act, and no separate account is kept. The following statement, however, shows that the cost of such large drainage schemes

as are specially contemplated by this Bill, could not be met from road cess collections. The figures are for 1893-94 :—

		Rs.
Net collections of road cess		37,36,000
Expenditure, district roads	Rs. 37,02,000	
,, on improvements, including water-supply.	2,47,000	
Total		39,49,000
Deficit		2,13,000

"So far, then, as road cess is concerned, the reply to the hon'ble member's statement is, first, that there has been no unfair transfer of Provincial roads to the control of local bodies; that such transfer is the natural, reasonable and inevitable consequence of the development of railways; and that when such transfers have been made, grants of the necessary funds have also been given; secondly, that the Duke of Argyll did not lay down the principle that village sanitation was a first charge on the road cess; and thirdly, that the cost of any far-reaching and expensive drainage schemes which may be stated under this Bill cannot be met from the proceeds of the cess because the local authorities who administer the cess cannot spare the money.

"I now turn to a second allegation. It is said that when the Public Works Cess Bill was introduced into this Council, the Hon'ble Mr. Reynolds stated that the proceeds of the cess were to be devoted to meeting famine charges and certain other extraordinary public works charges which he specified. It is alleged that after meeting those charges there is an annual surplus balance of nearly eleven lakhs, which is now spent on ordinary public works, but which might be applied to meet the cost of drainage schemes under this Bill. Now, this allegation assumes three things—

(1) that there is a separate account or fund of the public works cess;
(2) that this fund has a surplus;
(3) that it is open to the Government to apply this fund to the execution of drainage schemes.

"None of these assumptions are correct. There is no such fund; if there were, it would not show a surplus; if it did, that surplus could not legally or equitably be spent on drainage schemes. Here again, I fear, I must go back to matters of history—of rather ancient history. In the first place, Mr. Reynolds's speech of 31st March 1877, made when asking leave to introduce the Bill, is not the most authoritative, nor is it the most distinct exposition of the scope of the measure. Sir Ashley Eden described the Bill more fully and more precisely in his speech of the 7th April, when he spoke of it as 'a measure for raising a further sum of money for the general development of works for the benefit of the whole of the Provinces.' The Bill was to do two things. It was to assist the famine finance of Government of India by relieving that Government of the charges for interest on certain specified works. It was also to extend the policy of financial decentralisation and to enable the Provincial Government to accept the responsibility for the maintenance of public works, existing and future, in the same way as it is responsible for other branches of the administration. Mr. Reynolds went very fully into the first object; he touched on the second very lightly. Sir Ashley Eden, in the speech which I have quoted, brought out both points at length, and the preamble and subsequent sections give legal expression to what he said. The preamble runs thus: 'Whereas it is expedient to empower the Lieutenant-Governor of Bengal to levy a cess on immoveable property and to apply the proceeds of the same to the construction, maintenance and charges of Provincial Public Works.' The question arose again in 1880, when the Hon'ble Kristo Das Pal moved an amendment to section 10 of what is now the Cess Act, which would have restricted expenditure on Provincial public works to works 'likely to protect the country against the occurrence of famine,' and would further have required the publication of an account. This

amendment raised precisely the same issue that the hon'ble member has raised now. Kristo Das Pal said that the proceeds of the cess were 35 lakhs and the interest charges 27 lakhs, and he wanted to know what had become of the balance of eight lakhs, just as the hon'ble member now wants to know what has become of the balance of nearly 11 lakhs. On the figures then put forward, Mr. Mackenzie replied that for the year 1879-80, the net receipts from the cess were estimated at 34½ lakhs, while the payments on account of interest came to 37 lakhs. For the next year the estimate of receipts was Rs. 32,71,000, and the interest charges Rs. 36,56,000. The balance, therefore, did not exist. On the figures now put forward, though the circumstances have in some respects changed, I have to give substantially the same reply. Taking for convenience sake the figures of the accounts of 1893-94, the results they show are the following—

		Rs.	Rs.
Net collections, Public Works Cess		...	40,54,000
Net receipts, major canals		...	2,17,000
Total receipts		...	42,71,000
Interest on capital outlay, major canals ...		...	24,60,000
Maintenance, minor canals		...	5,63,000
Expenditure on Provincial roads.	By Public Works Department	10,18,000	13,53,000
	By District Boards ...	3,35,000	
			43,76,000

"I say the circumstances have changed. They have changed in that the railways now pay their way and the Provincial revenues have no longer to pay the interest on the cost of constructing them. But while the charges for interest on railway capital have disappeared, the expenditure on Provincial roads has increased. This is a legitimate charge on the cess just as much as railways. Both are Provincial public works; both form part of that machinery for distributing the food-supply of the country which constitutes the real protection against famine. A railway without roads is useless. It is like an omnibus without a conductor. The one involves the other: railways imply roads. For a long time past the authorities of the various railways have pressed this matter on the attention of Government, and it has recently been taken up systematically on the lines laid down in the Public Works Resolution on feeder roads to the Eastern Bengal Railway system, which was published in the *Calcutta Gazette* about the middle of June last.

"It follows from the fact that one main purpose of the public works cess was to bring about an extension of the principle of Provincial decentralisation, and to enable Bengal, as Sir Ashley Eden put it, 'to use a little of its own milk,' which it had been contributing for the benefit of other provinces, that the idea of a separate account ceases to be practicable. The provision to this effect got into the Act of 1877 by a mistake and failure to realise the conditions of the case. It was never acted on, and it was abandoned in the Cess Act of 1880. As Sir Ashley Eden said in speaking on that Act, the fact that the money spent on public works largely exceeded the receipts from the cess was of itself a sufficient account. The receipts for public works cess, like any other receipts, are merged in the Provincial revenues, and go to make up the resources which the Government has to administer. Towards the end of the financial year, when the budget is being prepared, the Government is beset with demands for money. It is by that time in a position to make an estimate of its ways and means, and it has to decide between many conflicting claims. To restrict its action by cutting up its receipts into so many separate sums and laying down that each sum shall be applied only to certain purposes would create infinite confusion, and would render administration impossible. Instead of one balance there would be a dozen, and no one would be able to say at any particular moment how the Government stood or what they were in a position to spend. The true test is to see how the available resources are administered; whether reasonable demands are met; and how conflicting claims are dealt with. For the present all the public have to look to is that the Government spends on Provincial

public works as much as it gets from the cess, and that is clear enough without a special account.

"I have shown, Sir, that there is no separate account of the public works cess; and that if there were such an account it would not show a surplus. But even if this were not so, even if the receipts from the cess were greater than the expenditure incurred on objects properly chargeable to it, it would still be out of the question that drainage schemes under this Bill should be paid for from the public works cess. Such drainage schemes must necessarily be local works in the strictest sense of the word. They will affect only part of a district, perhaps parts of two or three districts, but it is inconceivable that they should be extensive enough to be properly chargeable against receipts which are set apart by statute for the execution of Provincial works. The Bill as it stands, goes as far as it is possible to go in the way of lightening the temporary burden which a drainage scheme may impose upon the people of the locality affected. It provides that Provincial funds and District funds may contribute to the cost of such schemes, but the main payment must be made by the people who are benefited by the scheme. This I submit is in accordance with the natural equity of the case.

"I turn to the representation of the British Indian Association submitted the other day. I am compelled to say that this letter is not up to the traditions of the Association. Considered as a piece of criticism it is a very poor bit of work, a thing of shreds and patches, and what is more you can tell if you choose to take the trouble where the patches come from. In the first paragraph the Committee assume a pathetic attitude. They grieve to find that far from modifying the Bill so as to remove objections, the alterations have made it worse. That sounds dreadful, but it is only a stock sort of phrase, which bears no relation whatever to the facts. One most important change has been made. The power of taking the initiative, of bringing this terrible engine to bear, has been transferred from the Government to a representative body—the District Board. Government cannot move a step of its own motion. And even when a scheme has been accepted by the Board, the power of modifying the scheme, which the Bill as amended by the Committee gave to Government, is restricted by the proviso, that if Government modifies a scheme so as to add to its cost, the District Board shall have a chance of rejecting it.

"Now take paragraph 2. Can anything be more crude than the fashion in which the Association lump together a number of Acts with no attempt at serious argument? I have dealt with the Cess Act and the Local Self-Government Act already. The others may be disposed of in a word. As to the Drainage Act VI of 1880, I reply in the words of my hon'ble friend Babu Surendranath Banerjee that, 'the proposed legislation has nothing to do with agriculture. The Drainage Act is for the improvement of the soil. What is now proposed is for the benefit of health.' I cannot put the matter more tersely than that. As for the Embankment Act II of 1882, it is true indeed that section 7 (4) enables the Collector subject to executive control to make any sluice or watercourse, or to alter any public watercourse for the improvement of the public health, and section 54 enables him to recover the entire cost from the zamindars of the estates, leading them to recover from their subordinate tenure-holders the proportionate sums allotted on them. Can this possibly be the procedure the Association wish to recommend? If so, their taste is remarkable. I wonder what they would say if they were taken at their word. They might chance to find the Collector's little finger thicker than the loins of the District Board. Paragraph 3 may pass for the present. I shall have something to say about it later on. Paragraph 4 is curiously inaccurate, and I must say I cannot understand how any one can make positive statements of this sort without the smallest attempt to verify them. I consider that both the mover of the Bill and I myself have something like a grievance on this subject. At the Belvedere Conference both of us advocated and voted for a system which would have left the decision with the residents of the locality affected, but the majority of the Conference, headed by Babu Surendranath Banerjee, held that the District Board was a thoroughly representative body, and that it ought to decide whether any particular scheme should be carried out. It was also pressed upon by the Hon'ble Surendranath Banerjee that compulsion was necessary, and that the people must be saved from themselves. For a reply to the allegation that the

people do not want drainage, I refer again to the same high authority whose name, I am confident, will go down to a grateful posterity as the true author of this Bill. At the Conference he produced a map of opinions on the subject specially collected by him, and all of them, with hardly an exception, were loud in favour of drainage. I will not read the passages. Any one can verify my statement for himself.

"Now for paragraph 5. I do not wish to appear too critical, but I cannot help doubting whether snipping bits out of newspapers is quite the best way of composing an official letter, though it may be the easiest. That is the history of the curious statement that, according to the last census, barely half the population were connected with agriculture. In point of fact, the occupation tables of the census show about 78 per cent. of the rural population to be engaged in agriculture. But this really understates the case, for the simple reason that people whose caste occupation is non-agricultural, but who also cultivate, get recorded as non-agriculturists. The settlement reports will show how the matter really stands. In Muzaffarpur it will, I think, be found that the entire rural population is more or less interested in land; and a few detailed cases such as which I quoted the other day from Munshi Nundji's report on the Mullarpur settlement in Birbhum are quite convincing. To the latter portion of the paragraph there is a double reply: first, that where you proceed on the principle of local option, the argument of infringement of vested rights simply does not apply; secondly, that if this were not so, the question of the right of the Government to impose a rate was settled once for all in 1870 by the very despatch of the Duke of Argyll which my hon'ble friend described as a memorable document. In fact, the claim of the zamindars amount to this. Because they get off with an absurdly light assessment under one class of taxation, they make the preposterous claim to exemption from all taxation; and in this particular case they demand exemption from a temporary tax which only comes into existence by the will of the representatives of the person who will pay it.

"In conclusion I will add a few words about the relation of malaria to drainage. Malaria occurs all over the world—not merely in India; its very name, malaria, bad air, is an Italian colloquial word introduced into English medical literature by Dr. McCulloch in 1827, expressing the popular belief that the bad air and noxious exhalations of marshy places cause a certain fever, the symptoms of which are everywhere the same in temperate or tropical countries. As to the cause, many authorities are of opinion that it is due to a special organism, an amæba discovered by a French doctor working in Algeria. There is a large body of opinion in favour of a specific cause as distinguished from mere alternations of heat and cold; and a waterlogged soil is peculiarly favourable to the production of this cause.

"All this theory, however, is really beside the point. If we were to wait till doctors had found out causes before we took steps to avert consequences, we should wait a very long time. There is ample evidence to show that the unknown cause of malarial fever—whatever it may be—is as a rule associated with stagnant water, with the obstruction of natural drainage. Not with water as such or with marshes as such, but with water which is dead. Where the water is moving and alive—though it may move too slowly for you to see it move—there you have no malaria. Raja Digambar Mitter pointed out this long ago, and Eastern Bengal is a standing illustration of it. There is a famous case of the same kind in Europe, the country known as the Spreewald, or jungle of the river Spree, round about Berlin and Potsdam. A queer 'amphibious country' as Carlyle called it. The villages there are all situated on lakes or bils in the middle of jungle. It is all water, creek and khals everywhere; people go to church and children to school in boats. But though you can see no stream, the water is alive, not dead. There is no malaria, there never has been, and the physique of the people is splendid.

"Further west in districts which form part of the same great plain, where the physical conditions are the same, but there is really less jungle and fewer marshes—in the west of Schleswig—Holstein, in Oldenburg, Westphalia, and the north of Hanover—the drainage has been obstructed by the silting up of khals, and there malarial fever is endemic. The khals have silted up by reason of the dykes made to keep out the sea. They have a most elaborate system of

embankments, just as we have in Midnapore and elsewhere, and it is admitted that the dykes have blocked the drainage. Much the same state of things prevails in parts of the Rhone valley, in the Charente south of the Loire, on the coast of Holland, and in many parts of Italy. In the lower basin of the Danube and the valley of its tributary, the Theiss, malaria is so bad that about half the population suffers from it regularly, and the Dobrutschka, the actual delta of the Danube, is almost uninhabitable from fever.

"Everywhere the cause is the same—obstruction of drainage; everywhere the fever is exactly what we know here, and, I may add, wherever drainage works have been carried out so as to restore circulation and set the water moving, there the fever has disappeared. You do not want to drain the place dry; all you want to do is to remove the condition of stagnation. This is what has been done in the fen districts of the eastern counties of England, where until quite recently malarial fever was endemic—it was always there. This was a district very much like the Berlin country which I have mentioned, only with this important difference—that the water was stagnant. Every one suffered from malarial fever, just as people do in Bengal, and curiously enough they used the same remedy—they took opium. Within recent memory the district has been drained; the fever has absolutely disappeared; the fens are now as healthy as the Berlin country, which is one of the healthiest in Europe. The water is still there, but it moves and does not stagnate; it is alive instead of being dead; and the district instead of being avoided as deadly is now a favourite pleasure resort in summer. People come from all parts of England to sail and fish on the Broads, as the great bils are called, which used to be perfectly fatal in the summer, at the very time when they are now full of tourists. The same sort of thing has been done in Romney marsh in Kent, in the Somersetshire marshes, in France, in Holland, and in Italy; and wherever it has been done the fever has vanished or has been greatly reduced. That is the experience of Europe in respect of malarial fever, which, I repeat, is the same all over the world. I have referred to this foreign experience at length for two reasons: (*i*) because drainage has been tried and its results can be seen; (*ii*) because the phenomena in Europe enable you, so to speak, to isolate the cause and bring out the connection of malarial fever with obstructed drainage. The climate there does not of itself tend to produce fever. It takes a special cause to do that, and you can see what the cause is. In this country the question is more complicated, and arrested drainage is only one of the causes. It is this complication, this presence of many possible causes which has obscured the subject in this country. Some people have laid stress on one of these and some on others.

"The great advocate of the drainage theory was Raja Digambar Mitter, attempting to show that the railways and the roads were the sole causes of obstruction. Others brought into prominence the impurity of village sites; others the use of bad water; others again poverty and bad food. Now this last is certainly not a cause *per se*, though it may contribute to disease by weakening people. Also when drainage has been spoken of there has been much confusion of thought. Some people thought subsoil drainage was meant, such as you have in fields in England, so as to dry up the rice-fields. Others referred to municipal drainage; others to drainage schemes intended to convert large *bils* into dry land. But if you understand by drainage, what is really meant in this connection—the restoration of the natural drainage channels so that the water shall flow and shall not stagnate—there is really no substantial conflict of opinion.

"In the discussion in the Press last year in connection with Sir Charles Elliott's Dacca speech, several well-known names were quoted against the the opinion that malaria is due mainly to obstructed drainage. Dr. Lethbridge was quoted as attributing malaria to poverty, whereas what he really said was that obstructed drainage was the cause. Dr. Greene, quoted on the same side, was really strongly in favour of the drainage theory. Colonel Haig and Dr. Saunders held that poverty was a factor in so far as it rendered people less able to resist fever. But neither of them regarded it as a primary cause. It must be added that since 1873 when these gentlemen wrote, the mills have developed enormously in the neighbourhood of Calcutta, and the lower classes there are much better off. As for Dr. Lyons, whom somebody quotes, none of

us can trace his writings. He has retired. However this may be—whatever may be the truth on the scientific side of the scientific point, there can be no question as to this—that, up to quite the other day, everyone in Bengal was a disciple of Digambar Mitter. Every one believed that drainage was the remedy and that Digambar was the prophet of drainage. Within the last year they have all been suddenly converted: apparently they see that they will have to pay for what they expected to get for nothing. It does not lie in their mouth to use the arguments which they have used."

The Hon'ble Babu Guru Proshad Sen said:—"While I fully appreciate the kind consideration, which, on a previous sitting of this Council, led Your Honour to postpone the final passing of this Bill to this day, I am really sorry that at my first introduction to this Hon'ble Council I have to oppose the motion for the passing of this Bill. I am aware that it has engaged the attention of the Council for about two years, has passed through all its stages and embodies the wisdom and experience of able members whose work, it is the height of presumption in me, to criticise. Yet I have to do a duty, however unpleasant it may be to me, and I shall, with Your Honour's leave and indulgence, state my reasons as briefly as I can as my apology for the somewhat unusual course I have to adopt. The Bill, as it stands with the new cess it imposes, call it a rate or what you please, whether imposed temporarily or permanently, virtually affects the Permanent Settlement under which it was declared that the *jama*, which has been assessed upon the land shall be fixed for ever, and no alteration shall be thereafter made; and the zamindars, their heirs and lawful successors, shall be allowed to hold their estates at such assessments for ever.

"These are the declarations that were made at the time of the Permanent Settlement. I shall not touch on the legal subtleties under which, in spite of the pledge thus given, the imposition of cesses are held justifiable, but it is clear that it is not alone by increasing the amount of the fixed *jama* that the Permanent Settlement can be broken, but also by imposing a number of cesses or rates. These partake of the character of those *abwabs* which the zamindars were hitherto condemned for imposing on their raiyats. Within the last 20 years an additional burden of taxations on land, being in fact something like 23 per cent. has been added to Government revenue in the shape of Road and Public Works Cesses alone. To our fixed land revenue of three crores and eighty-six lakhs of rupees, we have added eighty-one lakhs of Road and Public Works Cesses. How long will it then take to add cent per cent. Now, whether you add to the Government revenue directly by doubling it, or you double it by the imposition of additional cesses, the result is all the same. Then there is a further view of the case. Within the same period by the imposition of these two cesses alone, not to speak of the other cesses, the zamindars find one thirty-second part of his income from land gone. And as this imposition is on the gross rental, irrespective of the cost of collection and other incidental charges of zamindari management, the percentage or net profit will be nearer to 4 per cent. than 3, or it will be found that one twenty-fifth part of the zamindar's net profit is taken from him as Road and Public Works Cesses. This is again an absolute deduction, whatever increase there may be from time to time in the rents. If we go on adding to the cesses the whole of the zamindar's net profit is sure to go in the course of a few years more. In a book, which created some sensation at the time when it appeared, the way to nationalize or naturalize land as common property, was, just as the water or the air, pointed out to be to impose all public charges on land. Surely the British sense of justice, its respect for vested rights will revolt against such a proceeding and against its result, but nevertheless we may be drawn to that result by imperceptible degrees, and before people would be aware of it.

"It is not for me now to dwell on the advantages that have accrued from the Permanent Settlement, but I have a firm conviction, in which I find the majority of my countrymen share, that that settlement has benefited the people and the State alike, by the increased prosperity which it has brought about in its train and by the expansion which it has given to our other sources of revenue.

Bengal counterbalances what it pays less in land revenue by paying more in custom duties and assessed taxes, even if we were not to place to its credit the increased revenue which it yields from other sources. Anything, therefore, that tends to impair in any way that settlement, my countrymen humbly pray Your Honour's government to avoid. It does not, however, appear why landlords and cultivating raiyats alone should be taxed, while all classes of the community would benefit by the work. That this as an abstract proposition is not equitable, is admitted on all hands. But it is said that this equitable idea could not be given effect to, because there is no machinery existent to equalize the tax in proportion to the benefit conferred. It passes the comprehension of the public how a mighty Government like ours and this Hon'ble Council, which represents the supreme wisdom and intelligence of the land, would feel itself powerless to give effect to its idea of equity, and would have to adopt with thankfulness the solution suggested by an outsider which, however, is no solution at all. I may say that the idea of apportionment according to the amount of benefit conferred is adopted in the Embankment Act II of 1882. I would be the last man to say that a tax which would reach all classes alike, would be a preferable substitute. Taxation in the country has, under the present condition of things, reached its utmost limit.

"Now, if we eliminate the cess, there is, I respectfully submit, nothing new in the Bill, that is to say, nothing which cannot be provided for by the Local Self-Government Act. Part III, Chapter I, Head (*e*) of that Act provides for sanitation, and the Cess Act provides for the construction and improvement of drainage. Part III, Chapter I, Head (*e*) has to be extended to districts where it is not now in force and some rules framed by Your Honour under that Act. And the whole of the present Bill is reached *minus* the cess. In fact, if this view of these Acts be not correct, the District Boards, as their powers stand now, would not be justified at all in spending a pice out of the funds at their disposal for the initial expenses, if a scheme be abandoned as is provided for by section 10 of the present Bill.

"But there is another point which deserves serious consideration. Section 6 of the Cess Act provides that the rates at which the Road and Public Works Cess respectively shall be levied for each year shall not exceed the rate of half an anna on each rupee of the annual value of lands.

"Now, one of the many things for which the cess which is not to be more than half an anna per rupee is the providing or improving drainage, and the supplemental Local Self-Government Act authorises the District Board to provide for sanitation. This, of course, includes sanitary drainage, and for this as for other works, the maximum of cess to be levied, is not to exceed half an anna in a rupee of rent. I submit that the Cess Act has to be amended and the levy of a higher maximum rate rendered legal before any new Act can be passed.

"Turning to the details of the Bill, I find that section 16 has been so drafted as to override private rights. Lands might have been formed and good title acquired therein by adverse possession for 12 years after 1847. They might have then deluviated and reformed in their old site within 12 years before their acquisition under the provision of this Bill, but the owners will have no right to compensation if they have not been in possession for more than 12 years before such acquisition. Then the holders of estates and tenures are to be jointly and severally liable for the payments of the instalments as apportioned by the Collector, and in default their estates or tenures sold. It does not appear why the provisions of the Cess Act for separation of liabilities have not been incorporated in the Bill, and without such incorporation the present Bill, which purports to be complete in itself except where otherwise expressly provided for as in sections 23 and 24 of the Bill the separation of liabilities after the Collector has once determined the rate and apportioned the liabilities, does not seem possible as section 44 of the Cess Act has not been extended to the cess to be levied under the Bill.

"Then the provision for the summary recovery of contribution from the several shareholders after one of them has paid for them all. Section 49 of the Cess Act does not find a place in the Bill. The result will be that the Collector will look to the most solvent of these owners for the payment of the whole

amount and the last shall have no remedy against his co-sharers, unless he sues them in the Civil Court.

"'Agricultural holdings' refer only to lands cultivated, and the zamindars, though they shall have to pay for all kinds of rents including rents of homestead lands, shall not recover a pice from the owners of residential holdings; yet in Bengal there are owners of homestead lands with pucca buildings thereon, the owners of which are neither holders of estates or tenures in the village nor a cultivating raiyat. I am not sure whether it is really intended to exempt these men from the payment of the cess.

"We have then, this:—That the holders of estates or tenures shall have to pay their own debts *plus* the debts due from the cultivating raiyats on pain of having their estates or tenures sold at auction.

"In the Survey Settlement and Maintenance of Records Bill it was proposed that, if the raiyats were not to pay to the revenue authority their quota of debts on demand made, the amount would be recovered from the zamindars; but the raiyats would have to pay him the amount with the addition of twenty per cent. on such debt. Your Honour was graciously pleased to withdraw this provision on the consideration that it involves hardship to the landlords on the representation of His Highness the Hon'ble Maharaja Bahadur of Darbhanga. The landlords under the present Bill get no compensation for their trouble and risk, though there is no difference between the two cases.

"Then, while the Government recovers debts due by the landlord *plus* debts due from the cultivating raiyats by a stringent summary procedure, the landlord, after thus being compelled to pay, shall have to wait for the tardy process of civil suits to recover what he has paid.

"But, in fact, the considerate portion of the landlords shall not recover at all, for they know that even the smallest addition to the rents goes to produce considerable hardship to the cultivating raiyats, while the hardest amongst the lots shall, under the name of the legal cess, recover more than what they are entitled to.

"I appeal to Your Honour primarily in the interest of these cultivating raiyats not to impose on them an additional burden of taxation, for in spite of Your Honour's best intentions in their behalf, and in spite of such good intentions in almost all our officials who lead our administrative machinery, these raiyats live a very miserable life indeed with no sufficient food for themselves and their children. Mr. Finucane's report on the experimental survey establishes the fact that the extent of the holding of the raiyat under one or more landholders does not exceed three acres. On an average, on the produce of this small holding live five or six individuals (*vide* the same report). The mean produce of an acre under the most favourable circumstances such as irrigation from the Sone Canal does not exceed 21 maunds of paddy per acre. On a calculation, therefore, it will be found that the average family of this class in Bihar have to live on an income which does not exceed 60 rupees a year. They live in a wretched hovel worse than cattle sheds; they sleep on bare mats spread on damp ground; they cannot afford to pay for medicines in cases of illness. Perhaps the fault is primarily theirs, it is perhaps their *kismut*, that is not the question here, but I submit with all due respect that it is almost a cruel mockery to tax them in the name of sanitation, when the extra pice should go for the provision of salt, that necessary article of consumption in which they have to stint themselves.

"When the Government has saved raiyats from legal *abwabs* by the stringent provisions of the Bengal Tenancy Act, it does not behove it to impose number of cesses over and above the rent. The burden is all the same. But then it is said that it is a matter of local option.

"It would be a matter of local option if the resolution which your Honour put to the Belvedere Conference had been carried.

"It was to this effect:—'That when an application is made to Government on part of the inhabitants of any tract where malarial fever prevails, or when it is notorious, that there is a high rate of mortality due to the want of drainage, provision should be made by law for ascertaining the wishes of the inhabitants or owners of the property concerned, and if the majority support the scheme, the Government shall be empowered to carry out comprehensive schemes of

drainage and to raise from the area affected such funds as may be necessary for meeting the cost of such schemes.'

"According to the Bill, initiative will be taken on the application of a District Board. It will be disrespectful in me, coming as I do to Your Honour's Council on the recommendation of the District Boards, to deny their representative character. Yet I know what they are. There is always a strong body of nominated members. In several districts, all members of the Local Boards, which form the constituency for the election of the members of the District Boards, are nominated by Government under the condition of 'fixed abode' within the jurisdiction of the Local Board. His Highness the Maharajah of Darbhanga, living within a municipality, cannot be elected in any of the Local Boards comprised in his extensive zamindari. The Nawab Bahadur of Dacca cannot be elected for a similar reason. The District Boards are always presided over by an official Chairman. The application again is to be made by one District Board and it can compel others to join it. Local option, therefore, as in the Bill provided, is simply 'to gild the pill of compulsion'—an expression which is not mine, but which I find used in one of the earliest documents leading to the Belvedere Conference.

"But how are these sanitary measures when necessary to be undertken, if no body was to pay for them? I submit that the only possible method is to press on the Imperial Government the necessity for these good works, and to ask them to show this Government more considération in the matter of adjustment of the revenues—Provincial and Imperial.

"The difficulty at present arises out of what the people irreverently call the Thikadari system, under which the Imperial Government lay their hands on almost everything they can get and they do not leave you sufficient to carry on the routine of administration much less for works of public utility. Your Honour's government has always the sympathy of the people in the way in which it is treated by the Imperial Government in this matter of finance. It would earn the gratitude of the teeming millions under its sway if it were to set about to resist this tendency, instead of trying to meet its difficulties by falling on weaker bodies by in fact throwing its legitimate burdens on local funds, and where that is not possible by imposing additional burdens on lands, because I speak of outside impressions it is so easy to do so.

"It will be found that Bengal, after paying its legitimate share of the Imperial expenses, will have left enough to look to its own education, to its own medical relief, its famine relief, and host of other administrative duties, instead of encroaching upon these things, as it does now on the District Funds, and the District Funds set free from burdens which ought not to be thereon imposed, shall have enough left to look to sanitation, the primary item of which, I hold in some of the districts, to be the supply of pure drinkable water.

"At least the object aimed at as preventive of malarial fever is a debatable one. The hon'ble member, who has just spoken, has told us that there are various theories as to the causes of malarious fever. We are simply asked to proceed on the opinions of doctors, and the doctors do differ. There are important sections of the community directly affected by the Bill, who protest against it. The silt obstructions may not be possible to be removed after considerable expenditures have been incurred, such a thing happened at Dacca at the beginning of the formation of the District Boards, as the hon'ble mover of the Bill can inform this Council. A dredger was purchased to take away the silt from the mouth of a river, but the silts could not be removed, and the dredger was found to be of no use.

"Then there are silt obstructions, caused by tidal river, which, even if removed, would form again unless the cut was too deep, in which case there would be the apprehension of the whole force of water running into the new course, thus washing away valuable properties. At any rate, I find from the latest Administration Report that, notwithstanding the additional burdens thrown on the District Funds, the District Boards have at their disposal the surplus of twenty-five lakhs of rupees. Now, when the doctors differ, part of this money may be applied in experimental works of the kind, and, if the experiment prove successful, the Bill may be passed into Act. With this 25 lakhs of rupees in hand the urgency for the legislation against the wishes of the people does not appear to be great even as now half of the expenditure

ought to come from the general revenues; for if obstructed drainage is the cause of malarial fever in the land, the obstructions in some places are due in great part to the action of our engineer experts. This is the impression of the people with regard to the construction of railway and this is their impression with regard to the irrigation works also. It has been said that general revenues cannot be applied to especial local works which are contemplated under the Bill, but I submit that there is no reason why people in the locality should pay when the obstruction to drainage has been brought about by Government action.

"For all these reasons, I am sorry I cannot vote for the passing of this Bill. At least there appears to be no reason why the postponement for three months, asked for by the Hon'ble Maharajah of Darbhanga, should not be granted, and the Bill referred back to the Select Committee."

The Hon'ble MAHARAJAH JAGADINDRA NATH ROY OF NATOR said:—"Although I was one of the members of the Select Committee, I am sorry I was not able, owing to my ill health, to help my hon'ble friends in the way of removing some of its most objectionable clauses. I must say that the Bill in its present form is a decided improvement on the Bill as it was originally introduced. Here I feel it my duty to say that the Government is actuated by the best of motives in introducing a scheme like this, and it would have received the unanimous support of the country, if it had contained no provisions for the imposition of any tax at all—if the Government had come forward with the Provincial and District Board Funds for the construction and the maintenance of the drainage works. Because, as my hon'ble friend who represents the Dacca Division has said, it is impossible that any such schemes can be carried out under this Bill, as the people of this country cannot afford to pay for uncertain sanitation. It is true that some of the medical gentlemen who have been consulted, as experts, have given it as their opinion that improved drainage is calculated to do immense good, but there are others yet, I know, who entertain grave doubts as to the success of the scheme.

"Then again, at the time of the Permanent Settlement, the landholding classes of this country were distinctly assured by Lord Cornwallis that no further tax would be laid upon the land in future. With Your Honour's permission I will read an extract from His Lordship's despatch to the Court of Directors, in which the following passage occurs:—

"'If at any future period the public exigencies should require an increase to your resources, you must look for it in the increase of the general wealth and commerce of the country and not in the augmentation of the tax on the land.'

"The rate which was proposed in this Bill is regarded by the landholding classes as another increase to the tax upon the land. The first was the Road Cess, then came the Public Works Cess, and now a Drainage Cess is proposed. The zamindar class do not know where such sources of taxation will end, and they very justly regard all these cesses as so many encroachments upon the Permanent Settlement. As for myself, I am not in favour of any sort of taxation, but if taxation is at all necessary, why should the landholding classes be singled out for taxation, when the benefits to be derived from drainage will not be confined to them alone?

"Under all these circumstances, I feel it my duty to offer my respectful protest against the passing of this Bill, unless the Council is prepared to refer it back to the Select Committee for further consideration."

The Hon'ble MR. R. C. DUTT said:—"I do not intend at this hour to detain the Council with any lengthy remarks, but I have had the honour of being associated with the Hon'ble Mr. Lyall in both the Select Committees which sat on this Bill, and I feel that I am to some extent responsible for the shape which the Bill has taken. I wish, therefore, to say a very few words with reference to the remarks of the last two speakers.

"Something has been said about the proposed rate being a new cess in violation of the Permanent Settlement. I wish to point out in reply that the proposed rate is not a permanent cess, that it is not proposed to impose it on the whole of the province or on the whole of any district, and that it is not intended to levy it beyond a limited number of years in any part of the country. It is

a rate which will be imposed at the instance of local bodies, within limited areas, and for work of a definite kind, and when the work has been paid for, the rate will cease. It may rather be called a voluntary contribution on the part of the people as represented by the District Boards; it is a misnomer to call it a permanent cess. I do not wish to go into the question of its being an encroachment upon the Permanent Settlement, because it has already been fully answered by the hon'ble member, the Secretary in the Financial Department.

"Then it has been said that the rate will be inequitable, because it will not fall on the classes which will be benefited. To that proposition also I beg to demur. As has already been pointed out, the classes which are interested in land numerically come to something like 80 per cent. of the total population, and if we exclude the population of towns, it comes to about 90 per cent. Of the remaining 10 per cent., a good portion are unfit to pay any tax at all, so that we practically impose a rate on the whole population which will be benefited by schemes undertaken under this Bill. The Select Committee failed to find any more perfect scheme of taxation for the purposes of this Bill, and our critics have not ventured to indicate any such tax. Although not theoretically perfect, I consider that what we have proposed is a practically equitable rate which will fall on the people who will derive benefit from the schemes we contemplate.

"Something has also been said about the re-adjustment of Provincial and Local funds, and it has been suggested that, as the Public Works Cess was imposed for the special kind of works which we now intend to execute, they ought to be paid for out of the Public Works Cess, and not by the imposition of a new rate. To this argument the hon'ble member in charge of the Financial Department has already given a complete reply. But assuming that the Public Works Cess was imposed, not for the construction and maintenance of ordinary Public Works, but for special works which are calculated to save the people from famine and other calamities, then, what should be our attitude with regard to this Bill? This Bill is a statutory declaration of the intention of the Government to contribute from the Provincial revenues to special works of this nature. We have had, from time to time, contributions from the Provincial revenues for the improvement of particular localities, but this is the first act of this Council which will lay it down in so many words that the Government of Bengal intend to devote a part of their revenues, with which the Public Works fund has been amalgamated, to special works of this nature. It is a very difficult task to embody such an intention in a Bill, but the framers of this Bill went out of their way to declare it, and the Government permitted them to declare it, in the body of the Bill; and therefore our attitude towards this Bill should be, I think, not one of opposition, but one of cordial welcome.

"Then, some remarks have been made to the effect that the proceeds of this rate will probably be frittered away in making experiments, the results of which cannot be foreseen. I think the remarks of the Hon'ble MR. LYALL sufficiently prove that the schemes which we contemplate are not doubtful experiments, but works the utility of which has been fully proved. The hon'ble member has referred to a number of cases, and I ask permission to add one or two more from the Burdwan Division, with which I am myself acquainted. The two streams, known as the Kana Nadi and the Kana Damudar, were in former times the spill channels of the Damudar, but have now become stagnant. I find it on record that after the construction of the Damudar left embankment, which shut out from these two khals the supply of water they had hitherto received from the Damudar, they became little better than a succession of stagnant and fetid pools. Then followed a series of the most terrible epidemics of fever which Bengal has even known.

'As soon as it was recognised that the condition of these channels might be responsible at least in some measure for this terrible scourge, Government sought to remedy it. Obstructions which would retard the free flow of water in the channels were removed from their beds, the silted up heads were re-excavated; and, finally, water was admitted to the Kana Nadi in 1873 and two succeeding years. This was followed by an immediate and marked amelioration in the health of the inhabitants. In 1876 and 1877 the supply of water was stopped, and the health of the places along these river banks again deteriorated. In 1878 water was once more admitted, and subsequently works of a more permanent nature, having always as their object the improvement of the sanitary condition of the channel, were pushed forward, and

were practically completed in December 1887 when Sir Ashley Eden opened the canal which henceforward was to bear his name. The completion of these works marked the commencement of a new era of prosperity in the Burdwan and Hooghly districts. A supply of fresh water was now ensured to the renovated water courses. The once dreaded fury began gradually to disappear and the health of the inhabitants to rapidly improve.'

"This I find from a note drawn up in the Bengal Secretariat from reports submitted long before the present Bill was conceived. Since the opening up of these two channels, the people in the Burdwan and Hooghly districts have become fully alive to the importance of converting dead channels into living streams, and applications have been made from time to time, not unsuccessfully, for having other stagnant channels opened out. Only two years ago, when I was in Burdwan, a respectable and public-spirited resident of a village, in comparatively humble circumstances, prayed for the opening out of a stream which formerly connected these two rivers, and he came forward with a contribution of Rs. 1,500 to have the stream cleared out. I put the matter before the zamindars who owned the land, and most of them offered to give up the land free of cost. The rest of the cost of construction was provided by the Government, and that little work is now, I believe, an accomplished fact. This is an instance which proves that the people of tracts most affected by malaria are alive to the importance of such works, that they ask for them, and that they are willing to contribute for them. Subsequently to this, another scheme was taken in hand, as I stated a fortnight ago, and as the Hon'ble Mr. Lyall has mentioned to-day, in the Hooghly district; and the District Board asked for a contribution from the Government for the improvement of the Kausiki khal. The Government offered to pay half the expense, and I believe the work is in a fair way of being constructed. Last of all, I may mention that through the kindness of the hon'ble member, the Commissioner of Burdwan, I have information that another scheme has been proposed, and will probably be taken in hand, possibly soon after this Bill is passed. It relates to a number of villages in Purbasthali thana in the Burdwan district which suffered exceptionally from malaria in 1893-94. When I visited these parts in the cold weather of 1893-94, I found that nearly all the villages were suffering very severely from a bad type of malaria, and there was hardly a single house in which some of the members were not suffering, or had not recently suffered. I placed the matter before the District Board for consideration, and the Sanitary Committee of that Board have passed the following resolution:—'In the opinion of this Committee a limited number of unhealthy villages, say 50 adjoining one another, in the unhealthy thana of Purbasthali should be selected and thoroughly drained by the Board at once. This action would probably result in a marked improvement of health on the part of the inhabitants, and with this example the Board would be in a position to enlarge its sphere of action another year, and would probably be able to obtain a good deal of free or partly free labour from the people themselves when they see the benefit.' That is a very practical resolution. The Board want to begin work on a small scale, and if it succeeds, they will extend the sphere of their operation. All these cases show that the people appreciate the conversion of dead channels into living streams, and that they are coming forward not only with their applications, but also with their contributions.

"I have before me a protest from the People's Association of Faridpur to the effect that this Bill is unnecessary. I hope it will be a long time before the people of Faridpur will find works contemplated by this Bill to be necessary: for they do not suffer from the curse which afflicts both sides of the Bhagirathi. But the cases which I have cited sufficiently indicate that such works are needed in the affected districts, and that the people of these districts appreciate such works, and are applying for their construction.

"I do not think it necessary to quote many opinions upon this subject, but Dr. Coates was quoted on the other side to show that malarial fever is mainly due to poverty. I have Dr. Coates's opinion before me, and the opinion does not support that contention. There are also the opinions of other doctors, and I have in my hand the opinion of an eminent physician, Dr. McConnell, who regards bad drainage as the main cause of the type of malaria which prevails in most parts of Bengal. He says—'*Drainage* has been of the greatest benefit when carried out in malarial districts, and has converted unhealthy swamps

into healthy arable land. Ague may be said to prevail in inverse ratio to the successful drainage of any district.'

"I do not think it necessary to multiply opinions, because I believe there is a consensus of opinion that obstructed drainage is the cause of the type of malarial fever which prevails in these parts. And as the people appreciate the works which have been done, and are asking for the opening out of old channels, and have even come forward with contributions for the purpose, the Government have wisely decided that legislation in this matter should not be further postponed. And I consider it also a wise decision to place, not only the initiation of, but the final decision upon these schemes in the hands of District Boards. My hon'ble friend, BABU GURU PROSHAD SEN, has made some remarks about District Boards on which I do not wish to make any comment. But I have myself seen the work of District Boards in many districts, and I think it fair to state that these Boards represent, intelligently and ably, the views and wishes of the best educated sections of the people, and materially help us in the work of administration. The Government have decided wisely in vesting District Boards with power under this Bill, and I have every confidence, the trust which has been placed in them has not been misplaced."

The Hon'ble MR. A. M. BOSE said:—"While entirely agreeing with my hon'ble friend who has just sat down as to the benefits likely to result from the carrying out of drainage schemes, I very much regret that I am compelled to oppose the motion for the passing of the Bill at the present sitting of the Council. I quite admit that opposing the Bill at this stage is a task not lightly to be undertaken, that there ought to be grave reasons to justify the adoption of such a course, but I would beg respectfully to point out that there are in the present case such grave reasons. My first reason is that, having regard to the effect of the financial clauses of the Bill which are the principal clauses, the most operative sections of the proposed measure, there has not been a case made out for the imposition of a rate or cess, or tax, call it by whatever name it may please the hon'ble member in charge of the Bill to call it. And this objection goes to the very root of the matter. I have read with care the proceedings of the Belvedere Conference; I have gone through the speech of the hon'ble member in charge of the Bill when introducing it, and when subsequently he moved to refer it to a Select Committee, and of other members of the Council; but I do not find anywhere an attempt made to prove the necessity for fresh legislation of the kind here proposed. I submit that it is due to the members of this Council and to the public that a statement of a definite character should be laid before them, pointing out what are the important drainage schemes that are required in the interests of sanitation, giving an approximate or rough idea as to the cost likely to be incurred, and then showing that the financial resources of District Boards, with such help as may be available from provincial funds, are not in any way sufficient to meet such requirements. It would be a singular thing for a Chancellor of the Exchequer to ask for the imposition of a fresh tax, be it for a temporary purpose or for a long period, unless he at the same time produced a statement of facts and figures showing what the requirements are likely to be, what the advantages are likely to be, and that the existing sources of revenue can by no means meet such requirements. In the present case that has not been done; therefore as I said, the very basis of this proposal of taxation or rate, or cess, has not been made out.

"I confess there is considerable difficulty in understanding the genesis of this measure. As far as I have been able to follow the proceedings of the Belvedere Conference, three of the resolutions passed at that Conference apply to matters municipal, and one of them only to the question of rural drainage which came up almost incidentally, and had not been even so much as referred to in the Hon'ble Mr. Risley's note which led to the holding of the Conference, nor was anything said there to show the inadequacy of the present state of things. On the other hand, I attach very great weight to the expression of opinion by a gentleman whose opinion is entitled to the utmost consideration, namely, the then Chief Engineer and Secretary to Government in the Public Works Department, Mr. McNeile, which will be found at page 6 of the Appendix to

the proceedings of the Belvedere Conference. I shall first draw the attention of the Council to one matter to make the reference clear. At the present time and under the existing law, there are provisions for sanitary drainage. I need not refer to the provisions of the Bengal Drainage Act, because it may be said that these are intended for the drainage and improvement of land, though in passing I may point out that the drainage of marshy areas will have great effect upon sanitation as well. There is in fact an intimate connection between measures calculated to drain land or to open out water communications, and measures of drainage calculated directly to effect sanitation. But without referring to that Act, I may point out that under section 109 of the Road Cess Act there is distinct power to spend a portion of the district fund for the purpose of improving drainage; and further in section 79 of the Local Self-Government Act, the same thing is repeated. It is there enacted that 'it shall be lawful for a District Board to take measures for, or to contribute towards * * the construction and maintenance of any means and appliances for providing or improving drainage.' Then there are in the same Act certain provisions under head (E), having special reference to sanitation under which money may be expended, and which make it the *duty* of District Boards, so far as may be possible, to provide for the proper sanitation of their districts. Therefore there can be no question whatever that there are provisions in the existing law by means of which agricultural drainage as well as sanitary drainage may be carried out. And having regard to this, I place before the Council this expression of opinion from Mr. McNeile to which I have referred. He said with reference to proposed legislation:—

'My own idea is that it will be possible to do a great deal more under the present Drainage Act.' And he goes on to say—'If I am right in thinking we can do what is required under the existing Drainage Act, then it is worth consideration whether it would not be better to pass a special Act now for the particular water-supply scheme which has started this proposal to legislate, and not a general one.'

"It is, Sir, a common-place of legislation, one of its recognized axioms, that it must be shown that all that could be done under the powers already given by the Legislature has been done before fresh powers are given or asked for. As I have said, that has not been done. The burden of proof lies, and lies heavily, upon the promoters of this Bill to show the necessity for fresh legislation, and not only has that burden not been discharged, but not even an *attempt* has been made to discharge it. This appears to me to be a singular and a fatal omission so far as this measure, at any rate its taxation clauses, are concerned. I have already referred to Mr. McNeile's opinion. I must respectfully express my surprise that the instances mentioned by the Hon'ble Mr. R. C. Dutt of drainage schemes which have been successfully carried out by District Boards liberally helped by the Government were cited by him as arguments in favour of this Bill. It appears to me that instead of being arguments in favour of the Bill, they are reasons which go against the necessity for any such Bill. These and other instances which have been quoted, and many others which may be quoted, of improvements in sanitation by means of drainage, show that the District Boards, aided where there is need by Government, are in a position to carry out such schemes. Therefore until facts and figures are adduced which conclusively prove the necessity for this Bill, I submit with the utmost confidence that there is not that foundation laid which is requisite in all cases of fresh legislation. The general and indefinite proposition that more schemes of drainage can be carried out if there were more funds is not, I need hardly point out, by itself a justification for additional taxation.

"I proceed now to my next point. I have hitherto addressed myself to an examination of the necessity for fresh taxation or rating. Assuming for the sake of argument that this necessity has been made out, let us examine the principle of the rate which it is proposed to impose. That principle is one that is admittedly not a perfect one. It is not necessary for me to argue that point, because it has been very generally conceded; nor do I propose to go over the ground which has been trod on the last occasion that the Bill was under discussion. But I will, with the permission of the Council, read one passage bearing on this question of class taxation.

"John Stuart Mill, speaking of tax on rents, says:—

'A peculiar tax on the income of any class, not balanced by taxes on other classes, is a violation of justice and amounts to a partial confiscation.'

"In the present case it has been admitted that this taxation, although its object is to benefit all classes of the community, has been imposed on a particular class only, viz., on those connected with land. I have no right to claim the character of a representative of the zamindars; but as a representative, as far as I am, of a larger and, I trust I may without offence say, even a more important class than the zamindars, namely the raiyats, I venture to address a few observations on this point. I admit that the necessity of improving the health of the raiyats is a most important consideration, but it must be shown that this cannot be done by the materials or means of taxation now available, before his poverty is again taxed or the scanty means for eking out a miserable existence is further encroached upon. But it has been said that no practicable means can be devised for imposing a rate on all classes of the affected area. The question has been argued on a previous occasion. I will therefore only say that suggestions were then placed before the Council which might be considered as furnishing the basis of workable schemes. We have Mill's high authority for stating that taxation of this character is partial confiscation and a violation of justice. I mean no idle compliment to the members of the Select Committee when I say that I do believe that if this Bill were referred back to them, with additions to their number if need be, they would be capable of finding a means which would combine even-handed justice and fairness to all classes with practical utility.

"I may also refer to certain opinions from an eminent authority bearing directly upon this point. I do not quote the opinions of the representatives of various native associations and committees, not because they are not entitled to weight—I think great weight attaches to their almost unanimous testimony on the subject—but because it will probably be thought that official experience has a special value. Bearing that in mind, I may mention that various District Officers—the Magistrates of Nadia, Bankura, Mymensingh, Malda, Noakhali, and other places—have pointed out the injustice of a tax exclusively on land. I will not detain the Council by reading their opinions. I will read just one expression of opinion on that point and no more; and it is an opinion which I am sure the Council will receive with great consideration. Mr. Westmacott, Commissioner of the Presidency Division, writing on the 23rd March 1895 on the Bill as amended by the Select Committee, says:—'To throw the whole cost, or even a large proportion of it, upon the landed interests appears to me most inequitable, and such provision appears to me the most objectionable part of the Bill. I note that the Select Committee have considered suggestions for distributing the cost over the whole population, but have failed to discover any more practical method of doing so than that contained in the Bill. If this is so, I consider that the Bill should be dropped, as the proposed incidence of taxation appears to me unjust. I am most strongly of opinion that taxation should not fall upon the land, but on the population, and I deny emphatically that such population is chiefly agricultural. If benefited at all by sanitary drainage, the agricultural population will not be benefited to nearly so great an extent as the non-agricultural classes, and I cannot consider it just that they should bear the whole cost of it. I have considered such cases as occur to me of obstructed drainage which requires improvement, and they all suggest the view which I have expressed, and if any other cases are suggested to me, it will surprise me if I do not find the same facts as to the classes of the population to be benefited.'

"One remark more before I pass on from this point. I wish to point out the dangerous character of the precedent which is now being created. It is not only for the purposes of the present Bill, but having regard to the effect it will have on the course of future legislation, that I place this consideration before the Council. If at the present time in connection with the present measure when it is admitted that those who will be benefited are the whole population—if in such a case, because there is no machinery for carrying out a scheme of general taxation, the zamindars and raiyats alone are to be taxed—then at some future time when the question of taxation for carrying out some

other measure of general benefit is being considered, *e.g.*, the question of an education cess, the same thing will be said which is now being said, and with greater effect. It will be argued that a tax on the landed interest will be realised with the greatest ease, because the machinery is at hand, that that interest represents the bulk of the population in rural areas, and there will then further exist the precedent created by the present measure. I ask the Council to pause and consider well before establishing this precedent.

"My third reason for opposing the passing of this Bill is this, that there is no statutory obligation laid upon the District Board to make any contribution towards the cost of drainage schemes carried out under its provisions. Section 11 relates to this point, and it provides that the District Board after approving of the preliminary scheme shall deduct from the aggregate amount estimated under section 6 the sums, *if any*, which have been promised as private subscriptions, or contributed by the District Board or provisionally promised by the Local Government. Therefore it leaves it entirely optional with the District Board whether they are to contribute anything in furtherance of the scheme or not. I would point out that there is a special danger which will follow from a provision of this character. District Boards have power now to carry out schemes of sanitary drainage, and they have in many cases exercised that power as we have heard. After this Bill comes into operation, how are the two classes of drainage schemes to be distinguished, namely, the cases which may come under section 79 of the Local Self-Government Act under which District Boards must bear the cost, and the other class of cases in which schemes will be carried out under this Bill when their contributions will be entirely optional? Will there not be a natural tendency on the part of the District Boards—I suppose, however perfect they may be, they will have some share of ordinary human nature in them—to throw the whole cost of drainage schemes on the local area under the clauses of this Bill, rather than proceed under the provisions of the Local Self-Government Act. There will be too great a temptation to adopt this course, especially bearing in mind the fact that the initiation of drainage schemes, and subject to the sanction of the Local Government, the final adoption of them will rest with these District Boards. A provision imposing on the Boards an obligation to contribute towards drainage schemes, besides being just in itself, would insure on their part a greater sense of responsibility in sanctioning and carrying out schemes because they would themselves be bound to pay a certain share of the cost. At the same time there will be this further advantage, that the people of the locality will more heartily co-operate, knowing that they will be assisted by contributions from the District Board and from the Local Government. In the absence of that obligation they will not know, when a scheme is initiated, whether they are likely to get any help from these sources. In the papers which have been circulated there are various suggestions in regard to this matter; one, for instance, that one-third ought to be laid down as the least amount of contribution from the District Board and a similar contribution from the Local Government, the rest to be obtained from local sources.

"With regard to the financial position of the District Boards, I find that the balance in their hands on the last day of the year 1893-94 was Rs. 17,38,474, and further there was on that date an outstanding balance to be realized—this is with regard to both the Road Cess and the Public Works Cess—of Rs. 14,82,876. Therefore it cannot be said that the District Boards are not in a solvent or flourishing condition, or that they are in a condition in any way approaching insolvency; and it may be added there is in some quarters a feeling that the funds in the hands of District Boards are not always used as they should be. As only one illustration of this I may mention that in a representation submitted to the Council, very pointed reference is made to the fact that large contributions in furtherance of water-works within municipal, *i.e.* non-Board, areas were made by District Boards. I refer to the Arrah and Bhagalpur water-works. On all these grounds I submit that there ought to be an obligation laid by statute on District Boards to contribute towards the cost of schemes under this Bill."

[The Hon'ble THE PRESIDENT, rising to order, said:—"The hon'ble member is referring now to details which it is not the time for the Council to discuss at present, and which the hon'ble member had ample opportunity to consider when

the Report of the Select Committee was under consideration. I did not check the hon'ble member from Dacca, although he went largely into a criticism of details, because he had had no such opportunity. Now the Council is discussing the question whether the Bill should be passed, and the only arguments that should now be brought forward are arguments, affecting the general principles on which the Bill is based. This is not the time to discuss amendments which were never moved."]

The Hon'ble MR. A. M. BOSE, continuing, said:—"Having had the honour of only recently joining the Council, the papers connected with the Bill came to me too late to enable me to give notice of any amendment when the clauses came up for settlement by the Council; and I may be permitted respectfully to add that quite apart from this, the only way to show that a Bill ought not to pass is by examining its main provisions and pointing out their defects, which is what I am now endeavouring to do. A further reason appears from the statement which has been made by the hon'ble member, the Secretary in the Financial Department, as to the expenditure under the Public Works Cess. When the Public Works Cess Act was passed, the proceeds of the cess were intended not only for the payment of interest and working charges upon certain extraordinary public works—extraordinary in more senses than one—but also for the construction of new public works. That being so—a reference has been made to a declaration of Sir Ashley Eden on that point, and I have before me the declaration of Mr. Reynolds when introducing the Bill to the same effect—I submit that well-considered drainage schemes are as important as any other class of public works which are now undertaken from public funds, and ought to receive the utmost consideration from the Government. The obligation ought to be laid by express provision on them to help such schemes. As Mr. Skrine says:—

'It is the paramount duty of Government to secure the health of its subjects; and I think that in every scheme a certain portion of the cost should be met from provincial resources;'

and I may add that in Mr. McNeile's opinion—and there is no higher authority on the subject—drainage and water-supply are even more important than roads on which, as we have heard from the Financial Secretary, more than 13 lakhs of Rupees are spent annually from the provincial revenues.

"In the observations which fell from the Hon'ble MR. R. C. DUTT and from other speakers, a statement was made to the effect that this is really a measure in which the principle of local option is recognized, and much stress was laid on the point. My hon'ble friend in fact went so far as to say that payments under this Bill may be looked upon as voluntary contributions by the people, and therefore the Bill ought to be gladly accepted. I submit that that description of this measure cannot be justified. Section 3 relates to this matter and defines the constitution of the Drainage Commissioners. Under the operation of section 3, though there is a minimum fixed for the number of Commissioners to be elected by the District Board, there is no such minimum as to the number of Commissioners to be appointed from the representatives of the local landed interest; so that out of, say, 15 members of the Drainage Commission, while at least 8 *must* be elected by the District Board, it may happen that as many as 12 or 13 will be elected by it, and only 2 or 3 appointed from among the local representatives of the landed interest. There is absolutely nothing in the law to prevent this being done. I submit that these representatives ought to be secured a substantial position in the Commission before the Bill can be justly described as a measure of local option. But it may be said that after all, the initiation of the scheme is in the hands of the District Board, and the majority of the members of the Drainage Commission will also be elected from among the members of the Board. This raises the important question how far these latter can be said to represent the rate-payers of the district, and still more of the local area, in matters of this kind. I wish to point out that the provisions of the Bill are not calculated to secure local option. I know that I have the sympathy of the hon'ble member in charge of the Bill and of the hon'ble member, the Secretary in the Financial Department in this view; for at the Belvedere Conference they wanted the

initiation of drainage schemes to rest in the hands of the inhabitants of the locality concerned, and not with the District Board. As to the representative character of District Boards about which there has been some difference of opinion in this Council, without using any arguments of my own, let me place before the Council the following figures which I take from the Government Resolution on the working of these Boards for the year 1893-94, and which will speak for themselves. Out of 794 members of District Boards, only 309 were elected members, or about 38 per cent. But that is not all. Even these 38 per cent. were not elected by the people or the rate-payers themselves, but by the members of Local Boards; and therefore it becomes important to see what is the constitution of these Local Boards. There were in 1893-94 1,222 members of Local Boards, out of which 435, or about 35 per cent., were elected. The facts therefore indisputably stand thus. The majority of members in the District Boards are nominated and *ex-officio*, and even the minority, a little over a third, are elected *not* by the rate-payers, but by a body of whom about two-thirds are nominated by Government. The elective character of the average District Board may thus with mathematical accuracy be described by a ratio which is compounded of these two ratios, or by about one-eighth; and in this I do not take into account the influence of the Magistrate-Chairman, whose little finger, as we have been very candidly informed to-day by the Hon'ble Mr. Risley, is thicker than the loins of the whole District Board. Therefore whatever the present Bill secures, it certainly does not secure local option, nor will it realise the dream of voluntary contributions pouring in from the afflicted inhabitants of an affected area. And what adds to the regret is that the present Bill goes in this respect behind the existing Drainage Act of 1880, and the Drainage Act of 1871 which it repealed, both of which secured the majority in the Drainage Commission to landholders in the affected area.

"There is only one other point to which I wish to refer. It is a matter of regret that there is no provision in the Bill giving power to District Boards with the sanction of the Local Government to require contributions from railways, or in a minor measure it may be even from those who are responsible for roads and canals which are shewn to cause obstructed drainage. There is a considerable body of opinion as to the responsibility of railways in causing obstruction to drainage and thereby injuring public health. I will only read the opinion of the present Chief Engineer and Secretary in the Public Works Department, Mr. Odling. He says:—'I think the railway is a sinner in obstructing the drainage of the country. I fully agree that the railways are sinners' (page 9, Proceedings of the Belvedere Conference), and there are other opinions which fully bear that out. Therefore this also is a matter of importance in connection with the motion for the postponement of the passing of this Bill; because if there are obstructions to drainage of a serious character caused by railways, and in a minor degree by canals and roads, there ought to be a power of dealing with matters of that description. Section 11 of the Railway Act of 1890, which may be referred to, is not sufficient for the purpose, and does not confer powers which ought to be taken with the sanction of the Government of India in this connection. I submit that this is another ground why the Bill should be further considered. I will not detain the Council further. Having regard to the fact that no case has been made out for the imposition of an additional rate or the enactment of a new law, that the principle of that rate is unfair and establishes an undesirable precedent for future taxation, that no obligation is laid on District Boards or Local Government to help local areas in the carrying out of drainage schemes, that confusion is introduced in the application by the Boards of their varying and even conflicting powers under the existing law and under the present Bill in regard to such schemes in the future, that the principle of local option is not recognised and a retrograde step taken in that connection, that no provision is made in regard to railways and other sources of obstructed drainage, I venture respectfully but confidently to hope that a case has been made out for further and serious consideration of the measure, and that the Council will not give its assent to the passing of the Bill."

The Hon'ble MAULVI MAHOMED YUSUF said:—"At this late hour I do not propose to detain the Council by lengthy observations on the subject of the Bill. Much of what has been submitted to the Council this day belongs legitimately to a prior stage of the Bill, and it is not therefore necessary for me to indicate my views on every one of the arguments addressed to the Council. There are two propositions before the Council; the first proposition consists of the proposal, which has emanated from such a high authority as His Highness the MAHARAJA OF DARBHANGA, to postpone the further consideration of the Bill for three months. As regards this proposition, I have nothing to say. If, after due regard to the whole of the circumstances in connection with the subject, Your Honour will be pleased to allow time, that will be an act of courtesy and favour which will be duly appreciated.

"The other proposition before the Council is the motion of the hon'ble member in charge of the Bill, that the Bill should be passed into law. As regards this proposition, I have to say a word in explanation of the vote I intend to give. There are only two aspects of this measure; the sanitary aspect and the financial aspect. When I took my seat in this Council a few months ago, the measure had made considerable progress; in fact the Bill had already been before the Select Committee for a long time. The Bill was the outcome of what is known as the Belvedere Conference. At that Conference most of what was said was said in favour of the advantages likely to result from the measure: two of the hon'ble members now present took part in that Conference, and their utterances in support of the sanitary measure were forcible and exhaustive to a degree; their anxiety and enthusiasm were such that no delay was to be endured, and the project they said should be put into execution the day after: the enthusiasm continued when the Bill was introduced in the Council. The Hon'ble BABU SURENDRANATH BANERJEE said in the Council, if the measure was a fad, he was a faddist; but he was in every good company, for he was supported by expert opinion of the greatest authority. It appears to me therefore that as far as the sanitary aspect of the Bill is concerned, there is a consensus of opinion in its favour, and I have not the slightest hesitation in affirming and adopting that opinion.

"As regards the shape which has been given to the Bill by the Select Committee, the result has been placed before the Council by the hon'ble member in charge of the Bill. The Select Committee has improved the Bill in various particulars, consistently with public opinion: in fact the measure as it is now presented is pre-eminently the people's measure, and not the Government measure. If there is any objection in a particular case, the District Board has simply not to take it up at all.

"Then as regards the financial aspect of the Bill. It appears to me that this aspect must have been considered in all its bearings at the Belvedere Conference. It required no large amount of political sagacity and wisdom to know, when the Bill was first conceived, that money would be required to carry out its object and that that money must come from the area in which the Act was to be introduced, and not from any source lying outside the area. The utmost that could be expected from the Government was that it would provide for the least objectionable mode for raising money; that the mode recommended in the Bill was one of the possible modes should have occurred to those who supported the measure at the Conference. And it did occur to them, and still they asked for the measure, which was deemed to be so urgent that they did not say they would have it only under certain circumstances and would not have it under other circumstances.

The form given in the Bill to the financial question is the best that human wisdom could devise, and it was admitted no other form was feasible. It follows therefore that the necessity for the measure was conceded to be so great that the financial shape of the Bill is not to be taken as in itself sufficient to put aside or to defeat the Bill. It fact the death knell of all opposition was sounded at the Belvedere Conference, which gave birth to the measure and the initial velocity given was so great that it is not now possible to withstand the force.

But notwithstanding the high authority of those gentlemen under the auspices of whose great name the measure was affirmed at the Conference, and notwithstanding the strong presumption which arises from the measure being

stamped with their names, that there could be no serious objection to the Bill, still if I could honestly and conscientiously believe that the Bill violated some fundamental principle and is radically defective, I should consider it my duty to join in the protest and to withhold my support from the Bill. But I am convinced that the Bill does not violate such principle and is not so defective. As regards the cry of the permanent settlement being broken by the provisions of the Bill, I do not think there is much force in the argument. The President had, at the instance of the Hon'ble R. C. Dutt, consented to certain changes in the phraseology of certain sections, the apparent effect of which might have been to treat and make the rate as part of the revenue or road cess. Under the old section 18 the rate was to be added to the road cess; under the new section 21, as finally settled by the Select Committee, the rate is to be collected with the road cess. So that the Select Committee has done its best to maintain the permanent settlement in tact and to see that there is no shadow of infringement of that settlement. And quite apart from the phraseology employed in the Bill, it appears to me that there is no infringement of the contract of the permanent settlement in this Bill. Without entering into a disquisition of the principles involved in the permanent settlement, I say that there would be violation of that settlement if for the same consideration a higher return were to be demanded by the Government; but if the consideration is additional and not illusory, then, as at present advised, there is no breach of the permanent settlement. The financial clauses of this Bill do not in any way infringe the conditions of the permanent settlement, because its provisions are not framed with the object of increasing the revenue, but with the object of collecting funds to meet the cost of necessary works of sanitation for the benefit of the subject, and no question has been raised that it is the duty of the Government to undertake such works and provide for the costs from the revenues. It is for these reasons that I give my vote in favour of the motion for the passing of the Bill.

The Hon'ble RAI ESHAN CHUNDER MITTRA BAHADUR said:—"I shall not on this occasion give a silent vote. I was one of those who were invited to the Belvedere Conference. I then thought, and I still say, that legislation is necessary for the purpose of improving the condition of villages in rural tracts. This Bill has gone through several stages in Select Committee, and whatever may be the opinion of that section of the community which entertains extreme views, I say that the majority of the people are grateful to Your Honour and to the hon'ble members who sat in Committee for the concessions made in favour of public opinion. The Bill gives local option to District Boards, it provides that the Commissioners to be appointed under the Bill should have effective control over the scheme; the Bill further makes provision for the joint action of Municipalities and District Boards under certain conditions. These are all salutary provisions which have made the Bill attractive. But it is the financial clauses of the Bill which really are to be looked into, and which I submit have created apprehension and dissatisfaction in the minds of zamindars and tenure-holders and rayats; financial considerations are in fact everything in a matter like this. Your Honour has received petitions from the British Indian Association and from other Associations on this point. They complain that the Bill makes an attack upon the terms of the Permanent Settlement, and they further contend that there is no necessity for this Bill. As regards the question of necessity I differ from them, I consider that there is necessity for action on the part of the Government; but as regards a breach of the terms of the Permanent Settlement, I do not wish to enter into the question as it has been urged in the papers before the Council and has been argued by my hon'ble friend, BABU GURU PROSHAD SEN. But whatever may be the view which the Council may adopt, whether it is too late in the day to consider the matter, or whether the zamindars are in a position to complain or not, and even if the Council think that the zamindars are wrong in their contention, I submit that the Bill contains provisions which may be taken to be an invasion of the vested rights in private property; in a country where we find scarcity, if not famine, occurring almost every ten years, where the agricultural classes are maintained solely by the produce of the soil, where the soil itself is not improving, it is a question whether it will be politic, wise and fair to impose another burden upon the

landholding classes. Information has reached us from the last Census returns that the agricultural population consists of a little more than half the whole population, and under these circumstances it is of the utmost importance for Your Honour and the hon'ble members of this Council to consider whether a cess, or whatever it may be called, should be imposed upon the landholding classes who I submit are already suffering from severe load of taxation.

"I do not wish to detain the Council after the exhaustive speeches we have heard, but I submit that a Bill like this ought to have a wider sphere of operation; that while it is improper to contend that the whole cost of these schemes should be borne by the Government, I submit it would not be right to say that the greater portion of the cost of construction should be paid by any particular classes—I mean the landholding classes. As I have said, I think it necessary that there should be some sort of local rate to carry out the object of this Bill, but such local rate should not be of the nature of the Road Cess, and if it has been found difficult to find out the means of imposing such a rate, that I submit is a very good reason for referring the Bill back to the Select Committee."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"I have a few observations to make upon the motion before the Council. I did not intend to offer any remarks at all on this occasion, but the criticisms of my hon'ble friend the Financial Secretary to Government, call for a protest and a remonstrance from me. It is a very happy sign indeed that an official member in the position of the hon'ble the Financial Secretary should from his place in Council endeavour to defend a measure of the Government against public criticism. It is an expression of homage to public opinion. Might I be permitted to hope that this feeling may be carried a stage further, by the acceptance by this Council of the proposal of my hon'ble friend THE MAHARAJA OF DARBHANGA, so that an opportunity might be given to some of the new members of this Council to consider a measure of this gravity and importance.

"I do not myself in the smallest degree recede from the position I have taken up in regard to this Bill since its introduction into this Council. I still believe that obstructed drainage is the cause of malarial fever, and that malarial fever is a prolific cause of death in these provinces. I have had personal experience of the truth of this statement. Some years ago I went to a village in the Hooghly district which is associated in my mind with the dearest recollections; at one time it was a prosperous and a happy village; now it is a wild scene of desolation; the houses are in ruins; malarious fever has done its work of death. So far, therefore, as this Bill seeks to grapple with this question of obstructed drainage and malarial fever, it is entitled to my unstinted sympathy and support. But it is neither politic nor fair to impose a rate or tax upon any section of the community for the purposes of this Bill. I contend that the Bill is partly a measure of local option. You give the District Boards power to initiate schemes of drainage. You cannot compel or coerce them. It is a matter left entirely to their discretion. Now is it conceivable that any District Board having any pretensions to a representative character would of its own accord initiate a drainage scheme which would involve the imposition of a new cess upon the people subject to its jurisdiction? Unless a District Board has ceased to be representative in its character, it would not of its own free will and motion do anything which would lead to the imposition of a rate of this kind. Therefore to require the imposition of a cess at the instance of the District Board is to declare that this Bill shall be a dead letter. Relieve the Bill of the necessity of imposing a fresh tax, and you will make it a Bill that will be largely availed of by the District Boards. The hon'ble the Financial Secretary has contended that the surplus of the Road Cess fund is not available for sanitary purposes. Is there anything to prevent the Government from directing that works of sanitation should be a first charge on the Road Cess fund? The Government makes rules under the Local Self-Government Act. Is there anything in the Act to prevent the Government from making it obligatory on District and Local Boards that the first charge on the Road Cess fund should be the sanitation of local areas? Roads are good things; but sanitation

is better. Roads are a luxury; sanitation is a necessity. People must first live, before they can make use of the roads which a beneficent local authority may provide for them. My hon'ble friend the Financial Secretary admits that roads which used to be maintained out of Provincial funds, have in many instances, been made over to Local Bodies, but my hon'ble friend contends that they have been paid for in every case. I know of at least one road which used to be a provincial road. The local Municipality has now been called upon to maintain it. I am not aware that the Government has made any contribution towards its maintenance. Therefore that is a statement which I believe is not strictly correct, if it is to be accepted as being of general application. My hon'ble freind has pointed out that there is a balance of 14 lakhs of rupees in connection with the Public Works Cess. Who are the contributors to this Cess? The landed interest—zamindars and raiyats; and 14 lakhs of their contributions are devoted to purposes connected with the well-being of the general community. Is this fair and equitable? You do a double injustice to the landed interest by devoting a portion of the proceeds of the Public Works Cess to works which benefit the whole community, and then by again levying a cess upon the landed interest for sanitary works which will also benefit the whole community. When I brought forward an amendment calculated to remedy this injustice, I was told that the object I had in view was laudable, that the principle of the amendment was unobjectionable, but that it could not be accepted because it appeared to the Government to be unworkable. If that be the view of the Government, it follows that the cess proposed in the Bill is unfair, and I decline to be a party to a measure whch does not deal out even-handed justice to all parties, and I hope the Council will decline to be a party to it. I feel quite sure that if you have this cess embodied in this Bill, District Boards will not give effect to this measure. Therefore it seems to me that it is a matter of vital importance that we should carry the public with us, and then only can we hope to see a Bill based on the principle of local option adopted by our local bodies, and rendered operative for good. I hope and trust the Council will see its way to accept the proposal of the Hon'ble THE MAHARAJAH OF DARBHANGA, namely, that the further consideration of this Bill be postponed for three months. No works connected with drainage can possibly be undertaken until after the rains. The Government, in the Public Works Department, will lose nothing by this short delay; and in the interim there will be time for further deliberation, public opinion will be conciliated, and the sympathy of the public enlisted on behalf of a measure, for the success of which public sympathy is indispensably necessary."

The Hon'ble MR. LYALL said:—"I have a few remarks to make in answer to some of the observations which have been addressed to the Council by hon'ble members. In the first place I strongly echo what has been said by the Hon'ble MAULVI MUHAMMAD YUSUF, that most of what has been said to-day ought to have been said when the Bill was introduced, and not at the present stage of the Bill. There is, however, this excuse for those hon'ble members who have just taken their seats in Council that they had no other opportunity of expressing their views.

"Before dealing with the remarks of hon'ble members in detail, I wish to say a few words with reference to the motion of the Hon'ble THE MAHARAJA OF DARBHANGA. I have already referred to what has been said to-day in Council, and I may add that I have read the enormous amount of correspondence which has taken place in connection with this Bill, but there is not a single argument which has been urged to-day which has not been urged in that correspondence. Why then should we postpone the passing of a Bill, or refer it back to the Select Committee, when it has been some three years before the public, reckoning from the time of the Belvedere Conference, and before this Council for 18 months, and when no new thing can be said about it? I must therefore oppose the motion of the Hon'ble THE MAHARAJA OF DARBHANGA.

"Coming to the detailed criticisms of the Hon'ble BABU GURU PROSHAD SEN, I would first point out that he has, until quite the end of his speech, referred to the rate which will be imposed as if it was a tax which would

extend all over the country and would affect every zamindar and ryot in the Province, and as if it was to be levied permanently. I need hardly say that it will be levied only in a few areas with the consent of those who will pay, and that the extreme incidence will be 30 years.

"In dealing with the incidence of Road and Public Works Cesses, the Hon'ble Member has spoken as if the whole cess were paid by the zamindars, while as a fact half is paid by the raiyats.

"The Hon'ble Member next said that everything contained in this Act is already covered by existing legislation, and the same point was urged by the Hon'ble MR. A. M. BOSE. It is quite true that to a certain extent, section 109 of the Road Cess Act and section 79 of the Local Self-Government Act do apply to such schemes, but there are many schemes which District Boards are obliged to reject for want of funds. We now allow the inhabitants of a local area, who desire the execution of such a scheme, to say to the District Boards—'Very well, if you have no funds, we will pay for it, so give us our scheme.' It is in this respect that this Act makes provision for what could not be done before.

"The next point is as to the maximum rate of the cess. That point was very fully discussed in the Select Committee, and we did not fix any maximum limit, because we considered that it was very possible that where the amount was small the people would prefer to pay it straight off, instead of in the course of a number of years.

"The Hon'ble Member next dealt with the question of the poverty of the raiyats. My hon'ble friend is the representative of the District Boards of the Dacca Division, for which Boards he has apparently very little respect, but the statistics which he quoted refer entirely to the Patna Division; the famine he referred to occurred in that Division, and statistics regarding the average acreage of a raiyat's holding are also taken from that division. That acreage which he quotes as affording a bare livelihood in India is the exact quantity, 3 acres, which is held to be the ideal holding of the English labourer, and the native raiyat has already got the cow. As a fact, however, there is little or no chance of this Act ever being worked in the Patna Division, and the raiyats of this division represented by the Hon'ble Member are well able to pay this or any other rate.

"Another point to which the Hon'ble Member referred is the existence of a large balance which he referred to as 25 lakhs, but which the Hon'ble MR. A. M. BOSE called 17 lakhs standing at the credit of the District Boards, but I ask the Council to remember that there are 38 District Boards in the Province, and that it is utterly impossible for any public body like the District Boards or Municipalities to do without a working balance. Even the Lieutenant-Governor is tied down by the Government of India to keep a working balance in the Provincial revenues, and the balances at the credit of the several District Boards are no more than necessary working balances.

"The hon'ble member stated that at times the District Boards voted money improperly, and he instanced a matter in which I had some personal concern. I remember well the circumstances to which the hon'ble member referred. When Sir George Campbell visited Dacca, the question of getting a dredger to raise silt from the river bed was under the consideration of the District Board. Sir George highly approved of the proposal, and promised to make a grant of half the money. As a necessary consequence of this grant from the public funds, the dredger was ordered through the India Office; the specifications were never sent to the Municipal Board. And it was not until the dredger was nearly ready that the Board saw the plans. It then appeared that no locomotive power had been provided. The Board pointed this out, and at the last moment very weak locomotive power was added. When the dredger arrived it was found that the engine supplied was quite incapable of moving the dredger in the rivers of East Bengal. The result was that the article was useless to Dacca and the Government finally took it over, and to the best of my belief it is still working.

"The next point to which the Hon'ble Member referred was the joint action of District Boards for a common object. He would allow no Board to put pressure upon another Board, so that any Board would be able to hamper the

action of other Boards by refusing to carry out a continuous scheme. I venture to think that the proposal of the Hon'ble Member would be a step in the wrong direction, and on the contrary I think this is one of the best provisions of the Bill.

"I do not think I need reply to what fell from the Hon'ble Mr. A. M. Bose as to the submission of detailed estimates of schemes under this Act. I think the Council will agree with me that his suggestions are quite impracticable. The other criticisms in the opening part of the speech of the Hon'ble Member might properly be replied to by the Hon'ble Babu Surendranath Banerjee, who is far more the author of this Bill than I am.

"Another point to which the Hon'ble Mr. A. M. Bose referred was that only 38 per cent. of the members of District Boards are elected, and of those who elect them, only 35 per cent. are themselves elected. I am not myself a thorough believer in the virtues of election, and I think we have a very good example of the results of the elective system in the Municipality here in Calcutta. Here, as in other similar bodies—and I think the nominated members keep the bodies of which they are members from making a good many mistakes—I think the time has not yet come when we can trust to an entirely elected body.

"As regards the observations which fell from my hon'ble friend, Babu Surendranath Banerjee, I have a better opinion of District Boards than he has. I think they will put forward many schemes which will not cost much money, and which will do a great deal of good.

"With regard to the question of taxation generally, I have to say a very few words in connection with the remarks of my hon'ble friend. The question was fully and thoroughly discussed at the Belvedere Conference, and it was well understood that the carrying out of this Bill would entail taxation. Raja Peary Mohun Mukerjee brought the matter very fully before us, inasmuch as his main objection to the proposal was that it would involve taxation. Every member present at that Conference had it fully before him that taxation must come in some way or other. We have tried our best in Select Committee to evolve a perfectly fair method of taxation, and I for one do not think a better proposal could be devised. The Hon'ble Babu Eshan Chunder Mitter simply says it can be done, but he gave us no method of doing it. Not one of the proposals which have been considered and rejected have any possibility of being worked successfully."

The Hon'ble the President said:—"The debate to which we have listened has been of a very discussive character, and as I had occasion more than once to remark, has included subjects which one could hardly have expected to be touched upon in the closing debate on the passing of the Bill; but there was a special reason in the case of one and possibly of two hon'ble members, because of the newness of those members. I cannot but congratulate the Council in having had the advantage of hearing their views, and it cannot be said that every opportunity has not been given to those who were dissatisfied with the Bill to represent their opinions and bring forward their arguments with the utmost possible freedom and with abundant time given to them for preparation.

"The debate to-day has turned chiefly on the financial clauses of the Bill, and I think there is still considerable misapprehension on the subject in spite of the extent to which it has already been discussed. Our old friend the Permanent Settlement has been trotted out again. I cannot conceive how any reasonable person can suppose that the imposition of a cess under this Act has the slightest connection with any invasion of the Permanent Settlement. If there is a proposal to drain any obstructed channel, and if the zamindars and owners and occupiers of land which lie within the obstructed tract strongly object to any steps being taken to relieve the obstruction, I think they would have sufficient influence with the District Board to prevent any scheme being carried through. It has been said, and I was sorry to hear it, especially from the hon'ble member who has been nominated on the election of the District Boards of Dacca, that the District Board is not a representative body, and they have been belittled by one who has been sent here to represent them. I do not agree with what that hon'ble member has said, and I do not think he

correctly represents the independence and freedom of the District Boards with respect to matters which come before them, whether they are supported by the Government nominees or not. We have the opposite view stated by the Hon'ble BABU SURENDRANATH BANERJEE that he was convinced that no District Board would propose any scheme which would involve the imposition of a cess. However that may be, I think it may be accepted that a District Board would not sanction the imposition of a cess against the resolute and strong opposition of the persons who would be called upon to pay that cess. If then a scheme has been carried through the District Board it must have been with the consent of the landowners, and when the works have been carried out, who would have to pay for them? As the hon'ble member in charge of the Bill has said, if the District Board can pay for them out of money in its hands, or if the Government can make up a sum which added to the amount which the District Board can give would pay for the work, then there will be no occasion for the imposition of a cess. The Hon'ble BABU GURU PROSHAD SEN is in my opinion under a misapprehension in supposing that whereas drainage schemes are now being or can be carried out under the provisions of the Local Self-Government Act, because under this Act the District Boards will be able to impose a cess, therefore they will determine to bring the proposed work under the provisions of this Act and not under the Local Self-Government Act. I rather think the correct argument is that they will not impose a cess unless they find it absolutely necessary. Suppose it is necessary to impose a cess for a scheme of drainage, who should pay for it except those who benefit by it? These are principally the zamindars and holders and occupiers of the land, and can it be said that because there is a Permanent Settlement of the Land Revenue the zamindars should derive the benefit from such work and somebody else should pay for it? It was an impossible position to take up that the Permanent Settlement entitled them to have their lands drained and the obstructions they have made, or allowed to be made, cleared out of these drainage channels at the cost of others. The idea that the landed interest, who amounted to about 90 per cent. of the rural population should enjoy the benefits which would result from improved drainage, and that somebody else should provide the money was so absurd that it could not be entertained. It had been given up long ago in the two classes of cases of this kind which already exist. We have had frequent references to two Acts which are in existence, the Embankment Act and the Agricultural Drainage Act, which it is argued should take the place of this Act. The hon'ble member, the Secretary in the Financial Department has dealt with the suggestion as it affects the Embankment Act, and he might also have referred to the Agricultural Drainage Act under which the cost is equally borne by the landed interest. The hon'ble members who referred to these Acts forgot to notice that in both these Acts the whole of the cost is thrown on the landlord, and he does not get the power of passing on the half of it to the raiyats. Under the Embankment Act, he can pass it on to the tenure-holder, but not to the raiyat; under the Agricultural Drainage Act, he cannot pass it on to either, and can only recover from the raiyats by raising their rents; so that the two Acts which the Government are asked to consider lay on the shoulders of the landlord, a burden far greater than the burden we propose to impose upon him by this Bill. The little finger of these gentlemen will be heavier on the zamindars than the whole weight of the Government Bill.

"I have thus dealt with the proposition that land-owners should not be taxed at all. I will now pass on to the second objection that land-owners and agriculturists should not be the only classes to be taxed, as they will not be the only classes that will be benefited—that the taxation proposed by the Government will be of the nature of class taxation. Here again, we have perhaps been a little too modest and have allowed ourselves to be trampled upon unnecessarily. It is necessary to point out that the class upon which we are imposing a cess is practically the whole population, and that the class who will escape it are a very infinitesimal portion, hardly more than 5 per cent. We say that it is impossible to devise means by which to impose a cess upon those who are not agriculturists, in order that they may pay their share of the cost, without going through an amount of labour, creating an amount of machinery for assessment, for giving notice, for hearing objections, for hearing appeals, and for

collecting the cess, and incurring an amount of expenditure which no statesman would think of incurring.

"We have an instance before us to-day of the amount of error which exists on this subject. The British Indian Association have had the rashness to assert that the Census returns show that the agriculturists upon whom this rate would fall form barely half of the population. The gentleman who wrote that letter could not have consulted the Census returns, but must have been content to take his figures from some other source. I think I have recently seen that statement in a newspaper article, and it may have been taken from that source without taking the trouble of verifying the reference. My hon'ble friend, the Secretary in the Financial Department, has exposed the incorrectness of such an assertion, and he gave the exact figures of the Census returns which put the agriculturists proper and the rural labourers taken together at 78 per cent., and he also gave other references which justified the assertion generally accepted in all economic writings on Indian subjects, that the agricultural population cannot be taken at less than 90 per cent. of the whole. The Hon'ble BABU ESHAN CHUNDER MITTRA evidently failed to hear what the Hon'ble MR. RISLEY had said, and is still in the vale of ignorance, for he repeated the statement of the British Indian Association that the agricultural population is barely half of the whole population. This is an instance which shows how hard error dies and how easily a misstatement once set afloat is taken up and repeated without criticism or examination. It is important to impress upon the Associations and other public bodies who address the Council, that if they want honestly and intelligently to assist us in our deliberations, they must learn to verify their facts and assertions and know what they are talking about. If these matters were properly understood, the Council would not have so much of its time wasted.

"I turn next to some financial suggestions which belong to this part of the subject. We have heard to-day some instances of the extraordinary financial ignorance which used to prevail, but which has been largely dispelled by the knowledge gained in the discussions on the Budget. For instance, we are told that the District Boards have such large balances that they could meet any schemes for drainage out of those balances. The gentlemen who made those assertions did not know accurately what the amount of these balances was, but the true figure was 14 lacs of rupees. They did not consider that District Boards must have working balances in hand, and that for 38 Boards the average balance was under Rs. 40,000, which would not go far towards a large drainage scheme. Nor were they aware that in too many cases the whole of the balance has been forestalled, the District Boards having incurred liabilities which if presented at the end of March would have swallowed up the whole of their balances. Another thing we have been told is that the Government of Bengal should appeal to the Government of India for money to carry out schemes of drainage instead of imposing a rate. Where was the Government of India to find the money? People talked as if the Government went about with money in their pockets ready to give it away as people give charity to beggars. If the Local Government gave money for these drainage schemes when it had not a surplus, it would have to take it away from some other equally important source of expenditure. If the Government of India gave the money, they would have to rob some other Government. Why should the Government of the North-Western Provinces, for instance, be taxed to improve the sanitary drainage of Bengal? I think one beneficial result, which will accrue when members get into the habit of discussing public measures, is that in the course of time the Council will be saved from a repetition of arguments of this kind.

"The Hon'ble BABU SURENDRANATH BANERJEE has suggested that I should direct that sanitation should be the first charge upon the road cess. I must say I cannot agree with the hon'ble member, for this simple reason that the road cess is the road cess; it is not a sanitation cess. It is imposed for the purpose of making roads, repairing roads, and extending roads, and it would be an improper and dishonest diversion of those funds if we deliberately starved the roads for purposes of drainage. What we do hope

is that the proceeds of the road cess will be sufficient [illegible] a balance over. Some districts found it easy to [illegible] sions for roads, and yet have a surplus. Back[illegible] trict with more water-ways than roads was able to [illegible] to the District funds. My hon'ble friend, Mr. [illegible] told us how much the District Board of Burdwan [illegible] towards these sanitary measures. In this respect the despatch of the Duke of Argyll, from which hon'ble members have largely quoted, lays down instructions on this point in a very stringent form—

'Roads,' he said, 'are a first requisite in the improvement of every country, and although as yet they may not be equally valued by the people, it is the duty of the Government to think for them in this matter, and the benefits they must derive will become yearly more apparent to themselves.'

"I hope the hon'ble member will think for them. While I have the despatch in my hand, I should like to draw attention to a passage at the end of paragraph 24 which bears a good deal on the discussion which has taken place to-day. It is there said 'If there are some great improvements in their condition which we cannot afford to undertake, we must not be precluded from throwing the cost of such improvements upon those growing resources of which we heartily desire to see the people in enjoyment, but which are due in a great measure to the Government we provide'

"*We are exactly carrying out those principles.*

"*With regard to the connection between drainage and malaria, we had a very useful statement from my hon'ble friend, the Financial Secretary, and I am glad that he has drawn attention to the letter of Dr. Harvey. I regret to find, that a copy of it was not circulated to all hon'ble members, although it was laid before the Select Committee. It is a letter of the greatest importance and will go a great way to form public opinion on this subject, and I therefore propose to have it published in the Government Gazette.*

"In addition to what was said by Dr. Harvey, and what had been stated by the Hon'ble Mr. Risley to-day, I would draw attention to an article which appeared in the *Pioneer* of this morning, which treats of malaria as a thing as to which experts have now hardly any doubt that it is due to a bacillus which is to be found in the blood. There are no doubt some who still suspend their judgment, or consider the evidence weak, but the general tendency of science in the present day is in the direction of believing that this disease (malarial fever) is due to a poisonous bacillus of this kind, and that by effective drainage you can take an important step in the direction of destroying it.

"Now with regard to the proposal of the Hon'ble the Maharajah of Darbhanga to postpone the passing of the Bill, I agree with the hon'ble member in charge of the Bill that no reason has been shown for taking such a course. Few Bills have received fuller and longer consideration than this, and the effect of postponing its passing will be, either that I must leave it to my successor which would not be fair to him, or that a special Session of Council must be held early in December at a time when otherwise it would not be necessary to summon you. The effect of such delay would be to produce the precise effect which the hon'ble member thought it would not produce, viz., to prevent anything being done under the Act in the next cold weather, for if passed by the Council in December, it could hardly expect to receive the sanction of the Governor-General in Council before January or February, and by that time it would be too late for any practical work to be done in the cold season. This would be no argument against delay if it were shown that on general grounds delay is required for the fuller discussion of new arguments and objections, but no such cause as this really exists or is even alleged to exist. Nothing has been brought forward which is new, or which requires further consideration; we have all made up our minds, and the only result will be that we shall be bombarded with more papers from local bodies, such as those we have been lately receiving. From one point of view it is hardly courteous that communications addressed to this Council should not be noticed, but from another point of view many of them are of a description which makes it a waste of time to consider them. For instance, there is a communication from

a Mu[illegible]:—'We have learned with considerable [illegible]pose a tax,' and they say this after the [illegible]e the Council! Why, this question was [illegible]ference which met at Murshidabad only [illegible]ish Indian Association, who saw no merit in the [illegible]d their satisfaction at the amendments which had been [illegible]were there assembled delegates collected from the whole of Bengal, and yet the Murshidabad Asspciation never heard a word about it. There can be no doubt that for people of this kind to take a share in discussing public measures introduced by the Government will afford them a much-needed education." Then there is the Rajshahi Association who take exception to the financial clauses of the Bill, and ask attention to what they had previously written on the subject. Would it surprise the Council to hear that in the previous letter received from the Rajshahi Association nothing is said about the financial clauses of the Bill, except on the point that the cess should be so distributed as to include other than the agricultural classes. It is quite clear that these are mere puppets, and that the strings which make them act are drawn elsewhere. And it is the expectation of receiving such papers and such arguments as these, which is put forward to discourage the Council from passing a Bill which has been under consideration for a year and a half, during which time every point had been minutely examined and amply discussed. On the contrary, it appears to me that they afford a good reason why the Bill should be passed now, and thus save us from the receipt of further communications of the kind to which I have referred.

"In putting the motion of the Hon'ble THE MAHARAJAH OF DARBHANGA, I can only say that it is directly opposed to the wishes of the Government. I am anxious that the Bill should be passed to-day, and I trust the majority of the Council will vote on my side."

The motion that the further consideration of the Bill be postponed for three months was put and the Council divided.—

Ayes 7.	*Noes* 10.
The Hon'ble Babu Guru Proshad Sen.	The Hon'ble Nawab Syud Ameer Hossein.
„ Hon'ble Rai Eshan Chunder Mittra Bahadur.	„ Hon'ble Maulvi Muhammad Yusaf Khan Bahadur.
„ Hon'ble Mr. A. M. Bose.	„ Hon'ble Rai Durga Gati Banerjea Bahadur.
„ Hon'ble Mr. Smyth.	„ Hon'ble Mr. Dutt.
„ Hon'ble Maharajah Jagadindra Nath Roy of Nator.	„ Hon'ble Mr. Risley.
„ Hon'ble Maharajah Sir Luchmessur Singh Bahadur of Darbhanga.	„ Hon'ble Mr. Buckland.
„ Hon'ble Babu Surendranath Banerjee.	„ Hon'ble Mr. Bourdillon.
	„ Hon'ble Mr. Lyall.
	„ Hon'ble Mr. Cotton.
	„ Hon'ble Sir Griffith Evans.

So the motion was lost.

The motion that the Bill be now passed having been put,

The Hon'ble MAHARAJAH SIR LUCHMESSUR SINGH BAHADUR OF DARBHANGA, said:—"I wish to say a few words on the financial clauses of the Bill. I say it is intended to tax only two classes of the community, while the works proposed to be carried out under the Bill will benefit other classes as well. It has been said that the majority of the inhabitants of this province consists of landlords and tenants, that is to say about 80 per cent. of the whole population. Is that any reason why the other 20 per cent. should be exempted from the taxation to be imposed under this Bill? I say that the very fact of taxing the landholding classes for the construction of works which will benefit other portions of the community as well is a direct infringement of the Permanent Settlement. No doubt there are people who consider that the levy of a cess on land is not an infringement on the Permanent Settlement, but legal opinion on this point is divided. Such eminent lawyers as Sir Barnes Peacock and Sir Erskine Perry have recorded their opinion that the imposition of such a cess is an infringement of the Permanent Settlement. There can be no doubt of

the fact that among the landed classes there is a very strong opinion that the levy of the proposed cess will be a direct infringement of a direct promise made on behalf of the Government at the time of Lord Cornwallis, and this in itself is, I think, a sufficient reason for not inflicting any more taxation of this sort on the land. It may be that our contention is wrong; it may be that we are in the right. But there can be no two questions that there is a very strong feeling not only among us, but among other classes, that the Government has broken faith with us. Is it politic for the Government to do so? It may be that we are biassed in this matter, but I say, as was said by the Hon'ble BABU SURENDRANATH BANERJEE the other day, that if we err we err in good company. Sir Frederick Halliday, Mr. Ross Donelly Mamgles, and Sir Toby Prinsep, are all of the same opinion, and can it be said that these gentlemen were biassed in our favour? It is for these reasons that I wish to enter my most strong protest against any taxation which is inflicted upon the agricultural classes alone, but the benefits from which will be derived by the whole community. It has been said that one of the chief reasons for not taxing other classes as well is the difficulty of devising a tax which is workable. It may be a very difficult thing to assess other classes under this Bill, but because that difficulty exists, is it right that the agricultural and the landed classes should be made to pay for benefits which will accrue to other classes as well? It may be that there is no other way out of the difficulty, but one way is plain, namely, that the Government can, if it chooses, pay the expenses of these drainage works from the Imperial Exchequer."

The motion that the Bill as settled by the Council be passed was then put and the Council divided.

Ayes 10.

The Hon'ble Nawab Syud Ameer Hossein.
„ Hon'ble Maulvi Muhammad Yusuf Khan Bahadur.
„ Hon'ble Rai Durga Gati Banerjea Bahadur.
„ Hon'ble Mr. Dutt.
„ Hon'ble Mr. Risley.
„ Hon'ble Mr. Buckland.
„ Hon'ble Mr. Bourdillon.
„ Hon'ble Mr. Lyall.
„ Hon'ble Mr. Cotton.
„ Hon'ble Sir Griffith Evans.

Noes 7.

The Hon'ble Babu Guru Proshad Sen.
„ Hon'ble Rai Eshan Chunder Mittra Bahadur.
„ Hon'ble Mr. A. M. Bose.
„ Hon'ble Mr. Smyth.
„ Hon'ble Maharaja Jagadindra Nath Roy of Nator.
„ Hon'ble Maharaja Sir Luchmessur Singh Bahadur of Darbhanga.
„ Hon'ble Babu Surendranath Banerjee.

So the motion was carried and the Bill passed.

The Council adjourned *sine die*.

C. E. GREY,

Offg. Assistant Secretary to the Govt. of Bengal,
Legislative Department.

CALCUTTA;
The 20th August, 1895.

RESOLUTION ON THE ANNUAL REPORT ON THE WORKING OF THE CALCUTTA SHIPPING OFFICE AND OF THE SHIPPING OFFICES AT THE OUTPORTS FOR THE YEAR 1894-95.

No. 1644Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 19th August 1895.

RESOLUTION.

READ—

The Annual Report on the Working of the Calcutta Shipping Office and of the Shipping offices at the Outports for the year 1894-95.

The number of seamen of all nationalities shipped and discharged through the Shipping Office was 21,555 and 19,724, respectively, against 20,024 and 17,600 in 1893-94. Particulars as to the nationality of the seamen are given below :—

	1894-95.		1893-94.	
	Shipped.	Discharged.	Shipped.	Discharged.
British	1,545	1,946	1,726	1,577
Europeans, Continental	648	632	712	700
Americans and West Indians ...	266	183	350	300
Australians	19	16	20	13
Asiatics, other than Indians	245	294	271	298
Indians, proper	18,466	16,787	16,595	14,215
Eurasians and Goanese	366	467	350	97
Total ...	21,555	19,724	20,024	17,600

It is noticeable that while the number of British seamen shipped and discharged have shewn a falling off, the figures for Indian seamen show a remarkable increase. During the previous year also there was an increase in the figures for Indian seamen, and this would tend to show that the employment of lascars in place of European seamen is becoming more general. On this subject the Shipping Master writes :—

"It may not be out of place to observe that the lascar is a fairly good sailor, is cheaper in respect of both food and wages, requires less forecastle accommodation, is more amenable to discipline, and, as a matter of course, is gradually working his way against the British seaman."

He also observes that the seamanlike qualities of native firemen and lascars continue to improve. He adds :—

"As regards Eurasians no new faces were seen among the lascar crews shipped and discharged during the year, the isolated life they have to lead on board, as reported last year, probably acting as a deterrent to others."

The total number of seamen of different nationalities shipped and discharged from foreign vessels through their Consulates, who are not included in the figures given above are—

	1894-95.	1893-94.
Shipped	71	101
Discharged	91	88

2. The number of deserters again shews a slight falling off, being 62 against 64 during the previous year. In each case a prosecution was instituted, and a conviction obtained.

3. The receipts of the Shipping Office amounted to Rs. 39,823, against Rs. 35,545 during the previous year. The rise is almost entirely due to the shipping and discharging fees, which increased with the increased employment of native crews in vessels trading to this port. The disbursements were Rs. 23,711, against Rs. 22,883 in 1893-94, the rise being due to the payment of exchange and acting allowances to the establishment.

4. The transactions of the funds held in trust by the Shipping Office show a small increase. The details are—

	1894-95. Rs.	1893-94. Rs.
Ticket money	322	262
Deposit money of British seamen ...	38,797	34,706
Ditto of Native seamen ...	1,867	2,274
Estates of British seamen ...	5,765	7,545
Do. of Native seamen ...	3,675	1,907
Total ...	50,426	46,694

The amount of "Deposit money" varies with the number of men discharged or left behind in Hospital; the deposits were made by 321 European and 55 Native seamen.

The amounts remitted on account of seamen's money orders were Rs. 9,354, against Rs. 21,378 in 1893-94. The chief cause of the decrease was the unfavourable rate of exchange.

5. The number of distressed seamen sent home during the year was 26, against 36 in the previous year, 93 in 1892-93 and 61 in 1891-92.

6. Two cases of imposition on seamen were reported. In one case it was found that the Master of a vessel, when producing four seamen at the Shipping Office for their discharge, had made fictitious entries of charges on account of clothes supplied during the voyage. On this being discovered, the Master was directed to deposit the sums so deducted, which were made over to the seamen. On the facts being reported to Government, the Shipping Master was directed to prosecute all Masters of vessels who, while discharging any of their men, may deliver accounts of wages which, in his opinion, have been incorrectly prepared. In the second case, the crew complained of the short issue of provisions, especially fresh vegetables. The fact was admitted by the Master and compensation was awarded to the crew.

7. One case which may be held to be classed under the head of ill-treatment occurred during the year, viz., on board the ship *Cairnie Hill*, where twelve of the crew who were in jail for refusal of duty were taken out and put on board the ship when she sailed. They again refused to work when off Diamond Harbour, and the Master was ill-advised enough to attempt to compel them by force and by the use of firearms. Having thus put himself in the wrong, the men escaped the punishment due to their mutinous behaviour.

8. At Chittagong the number of seamen shipped and discharged was 46 and 33 against 35 and 22 during 1893-94.

The receipts on account of trust funds amounted to Rs. 4,075, against Rs. 4,360 during the previous year. These were deposits received on account of the balance of wages of 23 British and 2 Native seamen discharged by mutual consent, of 6 British seamen discharged under Medical Certificate, and 2 left in jail.

There was only 1 case of desertion, against 6 in the previous year.

The number of convictions was 24, against 32 in the previous year.

9. At False Point only one seaman, a native, was shipped, and none were discharged. Six visits were paid by the Shipping Master to vessels in port to inspect the provisions, water and medicines, as well as the forecastle accommodation.

10. At Balasore and Puri no transactions under the Merchant Shipping Acts are reported to have taken place.

By order of the Lieutenant-Governor of Bengal,

A. D. McARTHUR, *Lieut.-Col.*, R.E.,

Offg. Secretary to the Govt. of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 19th August, 1895.

Burdwan.—Rainfall at Burdwan ·97. Weather cloudy. Rain is badly wanted for the *aman* crop. The state of the *aus* crop and sugarcane is a little better. Condition of cattle good. Fodder and water plentiful. Common rice sells at an average price of 17 seers a rupee.

Midnapore.—Rainfall at Sadar 1·87. Weather hot and cloudy at times. Transplantation of paddy going on. More rain wanted. Indigo is being cut. Sugarcane doing well. Fodder and water sufficient. Common rice selling at 16 to 22 seers per rupee.

24-Parganas.—Rainfall at Sadar 5·33. Weather cloudy with showers. Prospects of sugarcane, jute and *aus* rice good. Prospect of winter rice indifferent. Transplantation retarded for want of sufficient rain. Rice sells at—

		Srs.	c.	
Sadar	...	11 to 13	0	per rupee.
Barasat	...	15	0	
Basirhat	...	18	13	
Diamond Harbour	...	16	0	

Murshidabad.—Rainfall 2·76. Transplantation of *aman* rice continues, but more rain wanted. Harvesting of *bhadoi* rice and manufacturing of indigo going on. Jute, sugarcane and mulberry doing well. Fodder sufficient. Price of common rice 16 seers per rupee.

Khulna.—Rainfall at Khulna 4·01, Bagerhat 2·82, Satkhira 3·13. Weather hot and cloudy. Harvesting of *aus* has begun in some places. Transplantation of *aman* going on. More rain wanted. Fodder and water sufficient. Price of common rice 15 to 22 seers 2 chitaks per rupee.

Dinajpur.—Average rainfall 2·64. Weather seasonable. Harvesting of jute and transplantation of *haimanti* rice going on. No outbreak of cattle-disease, nor any complaint for fodder or drinking water.

Rangpur.—Average rainfall 4·73. Weather seasonable. Prospects of crops good. Transplanting of *aman* and cutting of jute going on. Common rice sells at 14 seers a rupee.

Pabna.—Rainfall 5·47. Weather cloudy and rainy. Reaping of *aus* and jute continues. Rivers falling. Prospects of *aman* good. Heavy rain. Fodder and water sufficient.

Dacca.—Rainfall 5·96. Weather seasonable. Cutting of jute continues. Prospect appears to be good. Common rice selling from 12 to 19 seers per rupee. No cattle-disease. Fodder available.

Chittagong.—Rainfall 7·73. Weather hot. *Aus* is being harvested. Transplantation of *aman* in progress Prospects generally fair. Fodder and water sufficient. Sporadic cattle-disease reported. Rice sells from 15 to 18 seers a rupee.

Patna.—Rainfall at Sadar 2·11. Good rain fell at the end of the week. Prospects of *bhadoi* crops good. Transplantation of rice in progress. Condition of cattle good. Fodder and water sufficient. Common rice selling at 18¾ seers per rupee.

Gaya.—Rainfall at Sadar 4·25. *Bhadoi* crops doing well. Transplantation of paddy progressing. Price of rice 16 seers per rupee, which is cheaper than average.

Champaran.—Rainfall at Motihari 7·42. Transplantation of *aghani* crop going on. *Bhadoi* crops good.

Darbhanga.—Rainfall at Sadar 3·85, Samastipur 1·61, Madhubani 7·23, sufficient for transplanting purposes. Prospects of *bhadoi* crops favourable. Fodder for cattle sufficient. Price of common rice stationary.

Bhagalpur.—Rainfall at Sadar 3·88, Banka 2·22, Madhipura 2·68, Supaul 1·01. Weather hot and rainy. Prospects of standing crops good, but more rain is wanted. Indigo is being manufactured with an average outturn. Fodder and water sufficient. Common rice sells at head-quarters 17 seers 10 chitaks per rupee.

Purnea.—Rainfall at Sadar 1·32. Harvesting of *bhadoi* paddy and jute going on. Transplantation of *aghani* paddy still continues. Cattle-disease still prevalent in outpost Kasba. Fodder and water sufficient. Common rice selling at 16 to 20 seers a rupee.

Cuttack.—Rainfall 2·80. Weather seasonable. Early *beali* maturing. Weeding of late *beali* and transplantation of *sarad* continue. Prospects of *beali* good. Condition of cattle good. Fodder sufficient. Common rice sells at—

		Srs.	c.	
Cuttack	... ...	21	0	per rupee.
Jajpur	... ...	22	5	
Kendrapara	... ...	25	0	
Banki	... ...	22	5	

Hazaribagh.—Rainfall at Sadar 1·03, Giridi 3·97. Transplanting of paddy still in progress. All crops doing well. Fodder abundant. Common rice selling at Sadar 16 seers per rupee and Giridi 14 seers.

General Summary.—There was general rain during the week, but in the Burdwan Division and in some parts of the Presidency Division it is still very deficient. Except in these two Divisions, the cultivation of winter rice is generally making good progress. The harvesting of early rice and jute and the manufacture of indigo are in progress and promise a good outturn. The prospects of the *bhadoi* crops in Bihar continue favourable. Sugarcane is generally doing well. Cattle-disease is still prevalent in a part of Purnea, elsewhere the cattle are in good condition. The price of common rice continues steady.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 20th August, 1895.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

PRICES-CURRENT (*RETAIL*) OF FOOD-GRAINS, FIREWOOD AND SALT IN THE HEAD-QUARTERS STATION BAZARS OF THE DISTRICTS OF BENGAL, DURING THE FORTNIGHT ENDING THE 15TH AUGUST 1895.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 17TH OF AUGUST 1895.

DURING the previous week much heavier rain had fallen in Orissa than in any of the other districts especially in Bengal, where only about half the normal amount had fallen. At the end of the week a shallow depression had formed over the south of Burma, and that depression has had an important influence on the rainfall distribution over the whole province during the week under review.

On the 11th, the first day of the week just past, the depression having moved in a north-westerly direction, lay over the north of the Bay and parts of Lower Bengal and Orissa. A fairly regular cyclonic circulation of light winds then prevailed at inland stations, and as the disturbance developed very little in crossing the Bay, ordinary weather generally obtained in the south and east of the Bay, Temperature was 3° above the normal in all districts, and while the northerly winds continued, very little rain was falling. On the 12th the centre of the depression was close to the Orissa coast, which it crossed between False Point and Gopalpur. There had been a slow or moderate fall of pressure in the western and central districts of the province as well as in the north-west angle of the Bay, but the depth of the depression when crossing the coast was very small, the greatest defect being ·14 inch in the south of Orissa and the Circars. Up to the 12th rainfall was almost absent except in Bihar, where local disturbances were fairly numerous and showers of variable amount fell, and as the sky was only lightly clouded, temperature rose except in Orissa, which was more under the influence of the disturbance..

After crossing the coast the depression changed its course, moving to the north and afterwards to the north-east. At the same time it gradually filled up. On the 13th the area of lowest pressure was over Orissa and part of Chota Nagpur and South-West Bengal, with a cyclonic system of winds round a centre not far from Chaibassa. Pressure fell slowly at most of the Bengal stations, and the greatest defect was ·14 inch at Cuttack. General rain was now falling over the greater part of the province, and temperature fell 3°, but was still above the normal by small amounts except in the west and south-west. On the 14th the centre of the low pressure area was still in Chota Nagpur, and the slow fall of pressure in Bihar, while there was a rise elsewhere, showed that it was moving almost due north. The depth had diminished to about ·08 inch, but the general rain continued, though not in more than moderate quantity, except in North Bengal, where some very heavy falls occurred. On the 15th pressure fell slowly in Assam and North Bengal, and the shallow depression drifting eastward formed a diffused trough of low pressure over the northern districts. Within this trough winds were easterly except in the west of Bihar, where they became west on the 16th. General showery weather continued over the whole province during these days, and when the westerly winds began in Bihar, very heavy rain fell at some of the northern stations, but especially in North Bengal. The low pressure area over North Bengal and Bihar was slowly filling up, but at the end of the week there was still defect of ·07 inch in North Bihar, North Bengal, and Assam. As at the same time there was excess of ·04 inch in Orissa, and gradients ran almost east and west, conditions continued favourable for general rainfall in all districts except Orissa, where it was becoming scattered. During the cloudy rainy weather of the last three days of the week, temperature fell everywhere, and at the end there was defect of from 1° to 2° in Lower Bengal, Orissa, and Chota Nagpur, and of from 3° to 6° in the northern districts.

Pressure.—As the shallow low pressure area was over the western districts in the early part of the week, and in the north of the province during the latter half, pressure has been below the normal, though by small amounts. Changes have, as a rule, been very small, never exceeding a tenth of an inch, except on the 11th over the north of the Bay, and being generally below ·05 inch. Mean pressure for the week is below the normal in all districts by uniform amounts of about ·05 inch.

Temperature was above the normal at the beginning of the week, but fell steadily after the 12th, when cloudy weather became general. It was not till the 16th, however, that readings were below the normal, so that during the first five days of the week there was excess and during the last two a moderate defect. Means for the whole week are above the normal in all districts except Orissa and Assam, where they are practically normal. Excess is nearly one degree in Chota Nagpur and East Bengal and about half a degree in the other districts.

Rainfall has been general throughout the week except on the first two days when scattered showers fell in all districts, but especially in Bihar. The distribution has been fairly uniform if only the averages for the larger divisions be considered, but as local storms have occurred not unfrequently, falls have, in places, been heavy and irregular in amount. This has been the case, more particularly in the northern districts, a good example being afforded by the Bhagalpur district, where the total falls at the several stations vary from 1·56 inches at Supaul to 10·76 inches at Colgong. The average falls in the large subdivisions vary from 2·45 inches in South-West Bengal to 5·54 inches in East Bengal. Excess is 1·70 inches in East Bengal, 1·02 in Bihar, ·74 in North Bengal, and ·26 in Orissa, while in South-West Bengal there is defect of about half an inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 17th of August 1895 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of Week			Rainy days.			Since 1st of month.		Since 16th May last.

The average fall of the corresponding period for 24 years, Surveyor-General's Office		42·88

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; t, thunder; d, drizzling rain; p, passing temporary showers; g, gloomy.

IRRIGATION DEPARTMENT,—BENGAL.

Statement showing heights over mean sea-level and low-water in the Rivers Ganges, Bhagirathi, Jellinghee and Brahmaputra, for the month of July 1895.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FIRST QUARTER OF 1895-96.

No. 747B., dated Calcutta, the 15th August 1895.

From—N. K. BOSE, Esq., Offg. Secretary to the Board of Revenue, L.P.,
To—The Secretary to the Government of Bengal, Financial Department.

SALT.

THE HON'BLE MR. D. R. LYALL, C.S.I.

I AM directed to submit the following report on the state of the salt market for the first quarter of 1895-96, comprising the months of April, May, and June 1895.

2. The quantity of salt of every description cleared during the quarter under report amounted to 28,04,085 maunds against 24,97,442 maunds in the previous quarter and 27,18,594 maunds in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 66,34,015 against Rs. 58,07,558 in the previous quarter and Rs. 64,42,704 in the corresponding quarter of the previous year. In all cases fractions are omitted.

3. The quantity of locally-made salt removed from the golas in Orissa during the quarter under review and the quantity which remained in store at the close of the quarter are shown in table I:—

TABLE I.

1	2
	Puri.
	Mds. s.
Balance at the close of the last quarter ...	1,76,904 0
Manufactured or added during the quarter ...	1,18,816 0
Total ...	2,95,720 0
Sales during the quarter	17,932 0
Wastage	4,618 0
Total ...	22,550 0
Balance at close of the quarter	2,73,170 0

The total sale of locally-made salt during the quarter under review amounted to 17,932 maunds against 10,507 maunds in the previous quarter and 4,586 maunds in the corresponding quarter of the previous year. Duty was paid during the quarter on the full amount sold.

4. The subjoined table shows in detail the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under review, compared with the figures of the corresponding quarters of the previous two years:—

TABLE II.

	Total ...	22,02,549	23,57,524	39,30,552	26,39,409	21,37,691	27,05,518

* NOTE.—Adelaide and Cape Town come properly under none of the groups, but for convenience' sake they are placed under group IV.

5. Table III shows the quantity of the sea-imported salt remaining in the warehouses at the close of the quarter as compared with the results of the previous four quarters:—

TABLE III.

WHERE STORED.	First quarter of 1894-95.	Second quarter of 1894-95.	Third quarter of 1894-95.	Fourth quarter of 1894-95.	First quarter of 1895-96.
	2	3	4	5	6
	Mds.	Mds.	Mds.	Mds.	Mds.
Sulkea Government golas	14,74,417	26,25,575	29,61,285	28,77,803	25,35,802
Kidderpore Docks do.	.....	5,06,569	5,62,578	5,22,579	4,50,337
Chittagong do.	74,381	1,18,723	1,45,109	1,50,105	83,141
Khulna (Bonded Warehouse of Messrs. Turner, Morrison & Co.)	.....	.....	.....	1,300	584
Balasore (ditto)	.....	.....	.....	1,150	2,231
Total ...	15,48,798	31,10,857	36,68,972	35,52,997	30,81,195

The stock in bond at the close of the quarter under review, though reduced a little, is still very large; and the shipments of salt, as shown in paragraph 9, show no signs of decline.

6. The despatches of salt from Calcutta by water and the three railways passing the several salt-pass stations into the interior of the country both east and west of the river Hooghly, as well as the despatches by steamers and flats during the quarter under review and the corresponding quarters of the previous two years, are shown in the table below:—

TABLE IV.

PERIOD.	BY WATER.					BY RAIL.			BY STEAMERS AND FLATS.	
	Vid Balikhal.	*Vid* Sankrail.	*Vid* Gewakhally.	*Vid* Kidderpore.	*Vid* Ballighats.	*Vid* Ruthtollah Ghat.	By the East Indian Railway.	By the Eastern Bengal and South-Eastern Railways or *viâ* Chitpur.	Quantity despatched to the interior (excluding Orissa).	Quantity despatched to Orissa.

No transactions of sea-imported salt have been reported for the quarter from the ports of Cuttack and Puri.

NOTIFICATION—No. 3452M.

The 26th August 1895.—The following is published for general information.

H. H. RISLEY,

Secretary to the Govt. of Bengal.

WORKING OF THE FIRE BRIGADE IN THE TOWN AND SUBURBS OF CALCUTTA AND IN THE MUNICIPALITY OF HOWRAH, DURING THE YEAR 1894-95.

No. 6985, dated Calcutta, the 7th August 1895.

From—A. H. JAMES, Esq., Offg. Commissioner of Police, Calcutta,

To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit, for the information of Government, a report on the working of the Fire Brigade in the Town and Suburbs of Calcutta and in the Municipality of Howrah for the year 1894-95.

2. During the year 45 fires occurred, at 38 of which the Brigade was in attendance. Of the remaining seven fires, one was extinguished by the local police and six by the residents of the locality.

3. The estimated value of property destroyed during the year was Rs. 5,98,534. Two women were burnt to death in a busti fire in the Suburbs, and one man lost his life in a fire in the Town.

4. There were five fires in buildings licensed under Acts IV of 1883 and I of 1893, in which property to the value of Rs. 2,90,100 was destroyed.

5. Of the fires that occurred during the year under review, three call for special notice—

I. On the 11th October, at 1-30 A.M., a fire broke out on board the River Steam Navigation Company's flat *Bannu*, which was moored in the river opposite the Camperdown Hydraulic Jute Press and laden with bales of jute. This fire lasted 10 hours and was extinguished by the Fire Brigade and the Port Commissioners' floating engine. The damage caused by this fire was estimated at Rs. 1,31,347.

II. At 2-15 P.M. on the 22nd November, a fire broke out in a pucka godown belonging to the Howrah Jute Mills at Sibpur, which was stored with bales of jute. It was finally extinguished on the 25th idem and caused a loss of Rs. 1,32,500.

III. At 7-20 A.M., on the 23rd November, some jute in one of the press houses belonging to the Calcutta Hydraulic Press was discovered to be on fire. The conflagration rapidly spread over the press house and caused damage to the extent of Rs. 2,27,000. This fire was extinguished in 34 hours by the Fire Brigade, helped by the Manager and staff of Messrs. Ralli Brother's Press, who turned out with their fire extinguishing appliances very promptly and rendered able assistance.

6. During the year there were eight prosecutions under the Explosives Act, in all of which convictions were obtained.

7. A memorandum of the fires which occurred, and a statement showing receipts and expenditure on behalf of the Brigade, are enclosed.

Memorandum of fires in Town and Suburbs of Calcutta and in Howrah from 1st April 1894 to 31st March 1895.

Number.	Date.	Locality with section letter.	Duration of fire.	Approximate value of property destroyed.	Remarks showing nature of damage done, &c.
1	2	3	4	5	6
			Town.	Rs.	
1	9th April 1894 ...	Section N., No. 86, Wellesley Street.	2 hours	3,600	Huts, furniture and articles for sale.
2	11th May ,, ...	Section E., No. 107, Cotton Street	Ditto	875	Cotton about 200 maunds.
3	7th June ,, ...	Second Division, Port Police, Koila Ghat.	2 hours and 50 minutes	3,000	One cargo boat and jute.
4	10th September ,, ...	First Division, Port Police, Bag Bazar Ghat.	1 hour	50	Straw, one boat load. The fire was extinguished by the people of the locality.
5	4th October ,, ...	Ditto ditto ...	8½ hours	3,228	Three country boats and straw.
6	11th ,, ,, ...	First Division, Port Police, Camperdown Press Ghat.	10 hours	1,31,347	The flat *Banna* and 9,544 bales of jute.
7	20th November ,, ...	Section H., Harrison Road ...	50 minutes	16	Straw stored in the lower room of a brick building. Shaik Abdul, the owner of the straw, was found dead inside the room. He was evidently suffocated while attempting to extinguish the fire.
8	24th December ,, ...	First Division, Port Police, Ruthtollah Ghat.	4 hours	3,560	One country boat and jute.
9	31st January 1895 ...	First Division, Port Police ...	3 hours and 15 minutes	3 800	One cargo boat laden with jute.
Total 9 fires.				1,4).476	
			Suburbs.		
1	7th April 1894 ...	Section J., Dhaccoriah	2 hours	100	A stack of straw. The fire was extinguished by the people of the locality.
2	11th ,, ,, ...	Section F., Leechoo Bagan ...	30 minutes	150	Two huts. The fire was extinguished by the local police.

A. H. JAMES,
Offg. Commissioner of Police.

WEATHER AND CROP REPORT.

For the week ending the 26th August, 1895.

Burdwan.—Rainfall at Burdwan 2·09. Weather cloudy and hot. *Aus* and sugarcane doing fairly well. Prospects of *aman* rice improved by recent rain, but a large extent of land remains uncultivated. Condition of cattle good. Fodder and water sufficient. Common rice sells at an average price of 16½ seers a rupee.

Midnapore.—Rainfall at Sadar 2·42. Weather hot and cloudy at intervals. More rain wanted. Transplantation of *aman* paddy going on. Sugarcane doing well. Indigo has been manufactured with good produce. Prospect of *aus* paddy not bright. Common rice selling from 14½ to 22 seers per rupee. Fodder and water sufficient.

24-Parganas.—Rainfall at Sadar 2·79. Weather cloudy with thunderstorms. Prospects of *aus* paddy, jute and sugarcane fair. Transplantation of *aman* paddy proceeding slowly for want of rain. Harvesting of *aus* and jute has commenced at Barasat and Basirhat. Condition of cattle good. Fodder and water sufficient. Prices unchanged except for a slight rise at Basirhat. Rice sells at—

	Srs.	c.	
Sadar	11 to 13	0	per rupee.
Barasat	15	0	
Basirhat	17	12½	
Diamond Harbour	16	0	

Murshidabad.—Rainfall ·69. Weather hot and cloudy. Transplantation of *aman* continues. Prospects of standing crops generally good. *Bhadoi* paddy fairly swelled in the ear; outturn estimated to be fair. Fodder sufficient. Common rice sells at 16 seers per rupee.

Khulna.—Rainfall at Khulna 1·66, Bagerhat 2·05, Satkhira 2·35. Weather hot with occasional rain. Transplantation of *aman* going on. More rain wanted. *Aus* is being harvested. The grain in the ear on high land is not full for want of sufficient rain. Price of common rice 15 to 22 seers 2 chitaks a rupee. Fodder and water sufficient.

Dinajpur.—Average rainfall 5·54. Weather seasonable. Harvesting of jute and transplantation of *haimanti* paddy going on. No outbreak of cattle-disease, nor any complaint for fodder or drinking water.

Rangpur.—Average rainfall 2·60. Weather cloudy and warm. Transplanting of *aman* and cutting of jute in full swing. Fodder available. Cattle-disease in some thanas. Rice selling at 12 to 15 seers per rupee.

Pabna.—Rainfall ·76. Weather cloudy and rainy. Rivers steady. Harvest of *aus* nearly finished. Jute being cut. Prospects of *aman* good. Fodder and water sufficient.

Dacca.—Rainfall 1·25. Weather hot with rain at intervals. Prospects of crops favourable. Cutting of jute continues. Common rice selling from 12 to 19 seers per rupee. No cattle-disease. Fodder available. Rivers gradually rising.

Chittagong.—Rainfall 3·30. Weather hot. Reaping of *aus* and transplantation of *aman* in progress. Prospects generally fair, but more rain needed. Water and fodder sufficient. Rice sells from 14 to 18 seers a rupee.

Patna.—Rainfall at Sadar 4·28. Prospects of *bhadoi* crops favourable. Transplantation of paddy has made much progress and prospects have improved owing to recent rain. Condition of cattle good. Fodder and water sufficient. Common rice selling at 20 seers per rupee.

Gaya.—Rainfall at Sadar ·56. Prospects of *bhadoi* crops favourable. Transplantation of paddy going on. Price of common rice at Sadar 14 seers per rupee.

Champaran.—Rainfall at Motihari 3·75. Transplantation of *aghani* nearly completed. *Bhadoi* crops good.

Darbhanga.—Rainfall at Sadar 4·55, Samastipur 1·21, Madhubani 8·94. *Bhadoi* crop doing fairly well. Transplanting of paddy in full swing. Fodder for cattle plentiful. Prices stationary.

Bhagalpur.—Rainfall at Sadar 4·21, Madhipura 8·05, Supaul 2·65, Banka 2·37. Weather hot and rainy. Transplantation of paddy nearly completed. *Marua* has commenced to be reaped; prospects fair. Common rice sells at 17 seers 10 chitaks per rupee. Fodder and water sufficient.

Purnea.—Rainfall at Sadar 2·91. Harvesting of *bhadoi* paddy and jute going on. Transplantation of *aghani* paddy almost finished. Cattle-disease in Kadwa thana. Fodder and water sufficient. Common rice selling at 15 to 24 seers a rupee.

Cuttack.—Rainfall 2·11. Weather seasonable. Early *beali* rice maturing and being reaped in places; prospects good. Weeding of late *beali* and transplantation of *sarad* rice continue. Condition of cattle good. Fodder sufficient. Common rice sells at—

				Srs.	c.	
Cuttack	...	...	...	21	0	per rupee.
Kendrapara	...	...	...	25	0	
Jajpur	...	...	...	22	5	
Banki	...	...	...	22	5	

Hazaribagh.—Rainfall at Sadar ·96, Giridi ·27. More rain wanted for completion of transplanting operations. All crops promise well. Fodder abundant. Common rice selling at Sadar 16 seers and Giridi 14¾ seers per rupee.

General Summary.—There was rain throughout the Province during the week. The prospects of the winter rice crop are generally favourable, except in the Burdwan and Presidency Divisions, where considerable portions of land remain yet uncultivated for want of sufficient rain. Early rice and jute are being harvested; generally speaking, the former is expected to yield a good and the latter a fair outturn. The state of the *bhadoi* crops in Bihar and Chota Nagpur is satisfactory. Sugarcane is promising. No cattle-disease is reported except from Rangpur and Purnea. The price of common rice is almost stationary. The flooding of the Raidak river, which occurred in Jalpaiguri on the 9th July, is reported to have caused much loss of property and cattle in tahsil Kumargram; advances are being given under the Agriculturists, Loans Act.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
The 27th August, 1895.

C. E. BUCKLAND,
Secretary to the Government of Bengal.

The following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the In[land] during the month of May, 1895.

The total fall of rain from 18th to 24th August 1895		2 96
The average fall of the corresponding period for 24 years, Surveyor-General's Office		3·18
The total fall from 1st January to 24th August 1895		31·10
The average fall of the corresponding period for 24 years, Surveyor-General's Office		46·06

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 26th August 1895.

J. H. GILLILAND,
For Meteorological Reporter to the Govt. of India.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 24TH OF AUGUST 1895.

DURING the previous week a depression had moved from the north-west of the Bay over Chota Nagpur and then towards the north-east, when it became diffused and almost disappeared.

At the beginning of the present week it was still in existence though faint, and caused rather lower barometric readings in North Bengal and Assam than in other parts. In Orissa, Chota Nagpur and the west of Bihar, there was excess of about ·03 inch, and in the north-east defect of ·06 inch, differences which resulted in a uniform distribution and calm weather everywhere. Though winds were light the general tendency of the air movement was towards the east, but in Lower and Central Bengal the interaction of the light variable winds gave rise to local storms and a considerable amount of irregular rainfall.

Pressure on the 18th was rising slowly in the north of the Province and falling in the south and over the Bay, so that the distribution was becoming more normal. The changes on the 19th were very small at inland stations but in the same direction as those of the day before, while in the south of Burma a brisk fall give rise to a slight depression over that area. Irregular changes followed, and from being low in the north east of Bengal, pressure became lowest first in the west of Bihar and afterwards in Chota Nagpur and Orissa. As this change in the pressure distribution was developing the wind system also changed from being westerly in all districts to easterly, except in Orissa, Chota Nagpur and the west of Bihar, where directions continued westerly till towards the end of the week. On the 20th and 21st while the above change was going on, rainfall became very scanty, but as the easterly winds became general in Lower Bengal, rainfall again set in, generally as passing showers and continued till the end of the week.

The low pressure area which was over Burma and the east of the Bay on the 19th became more diffused on the 20th, when a moderate to brisk fall of pressure prevailed over Bengal and the north of the Bay. It became almost imperceptible on the two following days owing to a steady slow rise, but on the 23rd there was a shallow though well defined depression over the north-west angle of the Bay and the adjacent land areas. The development was largely due to the rising pressure in the north of the province, because the changes in the north of the Bay, though downwards, were very small. On this day the difference from the normal varied from excess of ·04 inch in the west of Bihar to defect of ·04 inch in Orissa. Slow changes of pressure followed, and the depression moved slowly towards the west coast without deepening. Being very shallow it was attended by cloudy showery weather, but it caused nothing in the way of stormy weather.

The week has, therefore, been one of practically settled weather throughout. Rainfall has been general, at first more in the north of the province, but towards the end of the week chiefly in the southern districts, except on the 23rd, when local storms and heavy showers prevailed in Bihar.

Pressure has changed by small amounts only and has rarely differed from the normal by more than ·05 inch. Owing to the shallow depression in the north of the province at the beginning of the week and to one of similar depth in the north of the Bay at the end, mean readings are generally below the normal by small amounts.

Temparature.—At the beginning of the week temperature was below the normal by considerable amounts, except in Orissa, where there was excess of 2°. A rapid rise followed, and by the 20th there was excess of 2° to 4° in all districts, except Assam, where there was still a considerable defect. As local storms were rather numerous during the latter part of the week, changes of temperature were more irregular, but it remained high in most parts, except in North Bengal, Bihar and Orissa, where there was occasional defect. Means for the larger divisions are above the normal by variable amounts, except in Assam. Excess is 1°·7 in Chota Nagpur, 1° in South-West Bengal, 0°·6 in Orissa and slight in the others.

Rainfall.—Showery weather has prevailed almost throughout the week, but as the rainfall was due more to local disturbances than to a steady monsoon, falls are irregular in amount. North Bengal and Bihar have received more than their normal quantities, excess in the former being more than one inch and in the latter a quarter of an inch. In the other districts there has been defect, of ·59 inch in East Bengal, ·84 in South-West Bengal, 1·07 inches in Orissa, and 2·26 inches in Chota Nagpur, where the average fall was very little over 1 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 24th of August 1895 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.

RESOLUTION ON THE ANNUAL GENERAL ADMINISTRATION REPORT OF THE BURDWAN DIVISION FOR THE YEAR 1894-95.

GENERAL DEPARTMENT—MISCELLANEOUS—No. 224T.G.

Darjeeling, the 29th August 1895.

RESOLUTION.

THE Lieutenant-Governor directs the publication of the Commissioner's Report on the General Administration of the Burdwan Division for the year 1894-95, for general information.

2. The Officiating Commissioner, Mr. Bourdillon, has summed up in his closing paragraph the most important questions which have come under the attention of the officers of the Division during the year. In addition to these the Lieutenant-Governor desires to draw special attention to Mr. Bourdillon's remarks in paragraphs 82, 113 and 134, on the Ghatwali Settlement, paragraphs 105-109, on the character and conduct of the Regular Police, and in paragraph 127 on the imperfection of the register of holdings in Khas Mahals.

3. The statements in Appendix B, showing the up and down imports and exports by rail of the Burdwan, Birbhum and Hooghly districts, are based on information supplied for the first time by the East Indian Railway Company, and have been compiled on a new system. It probably reached the Commissioner too late for the statistics to be utilised in the report. This information will henceforth be supplied for every railway station in the Province, and, combined with the registration of boat traffic, it will enable District Officers to form an accurate idea of the internal trade of the country.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND.

ANNUAL GENERAL ADMINISTRATION REPORT OF THE BURDWAN DIVISION FOR 1894-95.

No. 190J.G., dated Burdwan, the 16th July 1895.

From—J. A. BOURDILLON, Esq., Offg. Commissioner of the Burdwan Division,
To—The Secretary to the Government of Bengal, General Department.

I HAVE the honour to submit the Annual General Administration Report of the Burdwan Division for the year 1894-95.

2. The district reports were received in this office on the dates noted below:—

Burdwan	... 31st May 1895.	Midnapore	... 3rd June 1895.
Birbhum	... 3rd June „	Hooghly	... 30th May „
Bankura	... 3rd „ „	Howrah	... 1st June „

The reports, however, were generally incomplete, and further information had to be called for, which has not yet been received in all cases. Many of the appendices to the district reports were badly prepared, and more than 30 letters calling for explanation or for further information had to be addressed to district officers. I mention these facts rather in explanation of the delay which has occurred in submitting this report than as a complaint against the hard-worked district officers of this division.

3. The following paragraphs discuss the prescribed subjects in the usual order.

I.—CHARGE.

(*a*) Charge of the division.

4. Mr. Power was in charge of the division up to the middle of April 1894, when he retired from the service, and was succeeded by Mr. Romesh Chandra Dutt, C.I.E., who officiated as Commissioner throughout the remainder of the year. I took over charge from the latter on the 8th April 1895.

(*b*, *c*) Charge of districts and subdivisions.

5. The subjoined tables give details of the changes which occurred among the district and subdivisional officers during the year under report:—

District.	Name of Officer.	Period of Incumbency.	
		From	To
1	2	3	4
Burdwan	Mr. R. C. Dutt	1st April	14th April 1894.
	„ W. H. Vincent	15th April	4th December 1894.
	„ T. Inglis	5th December 1894	31st March 1895.
Birbhum	„ E. F. Growse	1st April 1894	8th November 1894.
		11th December 1894	17th March 1895.
	„ J. H. Temple	9th November	10th December 1894.
	„ E. G. Drake-Brockman	18th March	31st March 1895.
Bankura	„ R. Cornish	1st April 1894	27th February 1895.
	„ W. H. Vincent	28th February	31st March 1895.
Midnapore	„ D. B. Allen	1st April	7th December 1894.
	„ C. H. Bompas	2nd January	31st March 1895.
		8th December 1894	1st January 1895.
Hooghly	„ F. W. Duke	1st April	24th September 1894.
		23rd October 1894	31st March 1895.
	„ E. G. Drake-Brockman	25th September	22nd October 1894.
Howrah	„ G. A. Grierson	1st April	30th April 1894.
		7th January	31st March 1895.
	„ E. W. Collin	1st May 1894	6th January 1895.

District.	Subdivision.	Name of Officer.	Period of Incumbency.	
			From	To
1	2	3	4	5
Burdwan ...	Raniganj	Mr. J. E. Webster	1st April	16th May 1894.
		Babu Gopal Chunder Mookerjee ...	31st May 1894	31st March 1895.
	Kalna	,, Mahendra Nath Mookerjee ...	17th May	30th May 1894.
	Katwa	,, Sashi Bhusan Dutt	1st April 1894	31st March 1895.
		,, Banku Bihari Singh	1st April	12th ditto.
Birbhum ...	Rampur Hát ...	Mr. E. F. Ainslie	13th March 1895	31st ditto.
		,, J. Craven (Junior)	1st April 1894	16th October 1894.
Bankura ...	Vishnupur ...	Babu Rajendra Nath Ghosh	17th December 1894	31st March 1895.
Midnapore ...	Contai	,, Jagat Bandhu Chattcharjee ...	17th October	16th December 1894.
	Tamluk	,, Kedar Nath Biswas	1st April 1894	31st March 1895.
		,, Nanda Lal Bagchi	1st ditto	31st ditto.
	Ghatal	,, Kedar Nath Dutta	1st ditto	30th April 1894.
		,, Surendra Nath Ghosh	27th April 1894	31st March 1895.
Hooghly ...	Serampore ...	Mr. F. N. Fischer	1st April 1894	16th July 1894.
		,, S. C. Mookerjee	3rd November 1894	31st March 1895.
	Jahanabad ...	Babu Narayan Chandra Sen	17th July 1894	31st March 1895.
		,, Surendra Nath Majumdar ...	1st April 1894	19th July 1894.
		,, Bhupati Chakravarti	3rd November 1894	31st March 1895.
Howrah ...	Ulubaria	,, Brish Chandra Ghosh	20th July 1894	2nd November 1894.
			1st April	2nd February 1895.
			3rd February	31st March 1895.
			1st April 1894	14th May 1894.
			15th May 1894	31st March 1895.

It will be seen from the above that in no district in the division did the same officer hold charge throughout the year, and that the same remark applies to all the subdivisions except three.

II.—TOURS AND INSPECTION OF OFFICES.

6. Mr. Dutt, who was in charge of the division almost throughout the year, has left the following note of his tours and inspections of offices :—

(*a*) Tours and inspection of offices by Commissioner.

"I was out on tour for 119 days, not including the days that I was in Calcutta to attend meetings of the Bengal Council, and the more frequent meetings of Select Committees in February and March last. All the districts were fully inspected.

"In July I visited Bankura district and the subdivision of Vishnupur. I inspected the offices at both places and the Municipality of Vishnupur, and paid special attention to the question of settling ghatwali lands, which has been before Government in one form or another since many years past. The action which has been taken in this matter forms the subject of separate correspondence, and will be briefly alluded to in this report under the head of Police. I also paid particular attention to the working of the Certificate Act and to the road cess revaluation work, which is approaching completion in this district. I discovered that the Revaluation Deputy Collector had, under a misinterpretation of the law, committed serious mistakes in treating ordinary raiyats as tenure-holders for the purpose of the assessment. The matter was referred to the Board of Revenue, and the mistakes are now under correction. The subject will be referred to under the head of Land Revenue Administration in this report.

"In August I inspected Howrah district, visited the worst portions of the Municipality of Howrah in company with the Magistrate, and inspected Bally Municipality. I had a talk with the Municipal Commissioners of Bally about the sanitary condition of the town, and found them willing to introduce the sanitary provisions of the law into the whole of the town, which has since been done.

"In September I went to Hooghly, and inspected all the offices of that district and the Hooghly-Chinsura Municipality; and I also inspected Uttarpara and Kotrung Municipalities in this district. During my inspections I specially enquired into the Dankuni drainage assessment, and had a conference with the Collector and the Drainage Deputy Collector on the subject. I also looked specially into the road cess revaluation work, which has been completed in this district. Petty rent-free tenures above the annual value of Rs. 16 have not been incorporated with the parent estates in this district. The subject has been brought to the notice of the Board of Revenue, and will be referred to further on. Before leaving Hooghly I paid a visit to the Bansberia Municipality.

"In October, after the expiration of the Puja holidays, I inspected the Municipality of Howrah, and then visited and inspected Ulubaria subdivision in Howrah district. From Ulubaria I went up the Rajapur canal as far as

"In November I went to Midnapore, and inspected that district and the Municipality of Midnapore, and then the subdivision of Contai. The Court of Wards' Department required and received my special attention in this district. The road cess revaluation work, which is approaching completion, also required my attention, as the same mistakes as I had found in Bankura had been committed here, and had not been corrected after I had pointed them out. And both at Midnapore and at Contai I enquired into the work of the certificate offices and the establishments required. The work is very heavy in Contai, owing to the management of the Majnamutha estate being in our hands. There is no provision for having transfers of holdings promptly recorded in our books, our registers therefore are to some extent obsolete, and this adds to the work of the Certificate Department.

"In January I had a conference at Howrah about the settlement of ghatwali lands in Bankura, disposed of an appeal against the settlement proceedings preferred by Raja Sir Sourendra Mohan Tagore, and reported to His Honour the Lieutenant-Governor the completion of work in reference to one of the ghâts. I then proceeded to Birbhum district, inspected the district offices, and paid a visit to Hetampur and Dubrajpur, where there are a thana and a munsifi. I had a talk with the Chairman of the Suri Municipality about the sanitary arrangements of the town and about the revised assessment. The road cess revaluation work has lately been completed in this district, and the certificate work is not heavy.

"In February I inspected the offices of Burdwan district, and specially enquired into the road cess revaluation work, which is nearly completed here, and into the working of the Public Demands Recovery Act.

"In March I concluded my tours by paying another visit to Hooghly and inspecting the subdivisions of Serampore, Rampur Hát, and Raniganj."

7. The details of tours made by the district officers have been tabulated in the subjoined statement:—

(*b*) Tours of Collectors.

District.	Name of District Officer.	Period of incumbency.	Number of Days spent on Tour in—												Total.	Remarks.

8. All the district officers spent the prescribed number of days in camp.

Burdwan.

9. Mr. Vincent inspected all the subdivisional offices and sub-treasuries in Burdwan. His tour was principally confined to the Raniganj subdivision and to the western portion of the Sadar subdivision. He inspected the police stations and outposts, sub-registry offices, schools, factories, cooly depôts, collieries, dispensaries, district and village roads, pounds, and excise shops. He also enquired into the state and prospects of crops, the condition of the people, and the registration of vital statistics. Mr. Inglis began his tour in January by visiting that part of the district which lies between the Hooghly district and the railway line, as well as the subdivisions of Kalna and Katwa. At the end of February he went to Jamalpur in order to reach Rayna, which police station had not been inspected for some years. During his tours he inspected the subdivisional offices at Kalna and Katwa and the Local Board and Municipal offices in those subdivisions; police stations, sub-registry offices, schools, and pounds likewise received his attention. He also made a point of attending chaukidari parades and instructing and questioning the men on parade.

Birbhum.

10. Mr. Growse has summarized his tour in the following words:—"I have inspected every thana and outpost in the district, most of them twice. I have been over nearly all the principal roads, and recorded long notes about most of them. I have given special attention to panchayets' accounts and chaukidari matters generally, as it is of great importance to make a good start and to get the panchayets into good habits now that Act VI (B.C.) of 1870 is being systematically introduced. I have spoken to people of all classes as often as possible, and may say that on the whole the district had had a prosperous year, with good crops and with no occurrence sufficiently important to make history."

Bankura.

11. Mr. Cornish, Magistrate of Bankura, visited all parts of the district, inspecting the Court of Wards' office at Maliara, registration offices, municipal offices, schools, and patshalas, excise shops, roads, and pounds. He also paid special attention to the punctual payment of wages to the chaukidars and to the accounts kept by panchayets.

Midnapore.

12. Mr. Allen, Magistrate of Midnapore, visited the different parts of his district, inspecting thanas, municipal offices, and the offices of the Manager under the Court of Wards. The duty of giving a practical training in settlement work to the two assistants, Messrs. Walmsley and Platel, was also properly attended to. Mr. Bompas, who acted for a short time during Mr. Allen's absence, made a useful tour. He inspected many registration offices, pounds, police outposts, and excise shops, made enquiries about village unions and chaukidari matters, supervised crop experiments, and recorded his remarks in a very full and interesting diary.

Hooghly.

13. Mr. Duke's tour was distributed throughout the year. He visited all the rural thanas, outposts, and registration offices, and almost all the dispensaries in his district. Roads, schools, and the principal khas mahals also received a proper share of his attention. His inspections were in all cases marked by a thoroughness which is the distinguishing characteristic of his work. He could not inspect all the municipal offices, owing, it is explained, to much pressure of work towards the end of March, caused by his preparations for leaving the district on furlough.

Howrah.

14. Mr. Collin, who was in charge of the district of Howrah for over eight months, spent only 29 days in camp, principally in the south of the district. Mr. Grierson rejoined the district early in January, and found that more than half the required amount of camping still remained to be done. Mr. Grierson writes:—"Under ordinary circumstances this would have been easy, but owing to my eight months' absence there were several important subjects of which I had to pick up the threads, or which had been left over by my *locum tenens* for my decision. I thus found it impossible to do more than 10 days in January and 20 days in February. Owing to the numerous demands of the municipality upon me, it is very difficult to get away from head-quarters for more than a few days at a time."

Mr. Grierson's tour was principally in the north of the district, but he and Mr. Collin between them inspected all the registration offices, district roads, and police stations, as well as some of the outposts, several factories, many schools and patshalas, and excise shops. Mr. Grierson remarks that the repression of crime and the conduct of the police and chaukidars absorbed a considerable share of his enquiries.

(*c*) Tours of subdivisional officers.

15. The following statement shows the number of days spent by the subdivisional officers on tour:—

District.	Subdivision.	Name of Subdivisional Officer.	Period of incumbency.	Number of Days spent on Tour in—												Remarks.

16. All the subdivisional officers spent the prescribed number of days on tour, except the subdivisional officer of Katwa, Babu Sashi Bhusan Dutt, who was in charge of that subdivision almost throughout the year. He explains that his shortcomings were due to continued bad health. This is undoubtedly true, and the explanation may be accepted.

17. There is nothing deserving of special attention in the tour diaries of the subdivisional officers, who in moving through their subdivisions occupied themselves with the usual enquiries.

18. The subjoined table shows the various dates on which the Commissioner and the various district officers inspected the district offices and treasuries :—

(d) Inspection of district offices and treasuries.

District.	Dates of Inspection by Commissioner—		Dates of Inspection by District Officers—	
	Of office.	Of treasury.	Of office.	Of treasury.
1	2	3	4	5
Burdwan ...	21st February to 1st March 1895.	27th February 1895.	24th July to 30th October 1894. 5th March to 1st April 1895.	2nd October 1894. 31st March 1895.
Birbhum ...	29th January 1895	28th January 1895	26th September 1894 26th March 1895 and following days.	2nd May 1894. 30th September 1894.

Howrah ...	20th to 22nd August 1894.	22nd August 1894	By the Collector of Hooghly— 21st August 1894 and 13th March 1895. By the Magistrate and Covenanted Deputy Collector— 28th September 1894. 20th October 1894. 22nd March 1895.	1st October 1894. 29th March 1895.

19. My predecessor, Mr. Dutt, inspected all the district offices and treasuries. During his inspection of the Bankura Treasury he discovered that the treasurer was in the habit of temporarily misappropriating public money by falsifying certain totals of the daily balance sheet, so that it might appear that the amount removed was actually in the joint custody of himself and the treasury officer under double lock in the treasury. The matter was reported to Government through the Board of Revenue. The treasurer was prosecuted and convicted at the sessions, but was acquitted by the High Court. The management of the wards' estates and the condition of the wards' office in Midnapore came under the unfavourable notice of Mr. Dutt.

(1) By Commissioner.

20. All the Collectors made thorough inspections of their offices and treasuries twice during the year. Some few irregularities and omissions were noticed during the inspections, but with the exception of that noticed above, none were of a serious nature.

(2) By Collectors.

21. The following table shows the different dates on which the subdivisional offices and treasuries were inspected by the Commissioner and the district officers :—

(e) Inspection of subdivisional offices and treasuries by—
(1) Commissioner.
(2) Collectors.

Hooghly ...	Serampore ...	12th March 1895	12th March 1895 ...	22nd September 1894 ...	22nd September 1894 and 12th March 1895.
	Jahanabad ...	.....	.....	6th June 1894 and 6th January 1895. 2nd February 1895.	7th June 1894 and 6th February 1895.
Howrah ...	Uluberia ...	21st October 1894	21st October 1894	22nd August 1894 and 22nd January 1895.	28th September 1894 and 29th February 1895 by Collector of Hooghly.

22. Mr. Dutt inspected most of the important subdivisions, but did not visit Kalna, Katwa, Tainluk, Ghatal, and Jahanabad.

23. All the subdivisional offices and treasuries except Raniganj were inspected twice by the Collectors. Mr. Inglis visited Raniganj in March last and made a summary inspection of the offices, but had no time to make a formal inspection of the sub-treasury before his transfer to Patna.

III.—WEATHER AND CROPS.

24. The subjoined table shows the average rainfall in each district during the past three years:—

District.	Rainfall in Inches in—		
	1892-93.	1893-94.	1894-95.
1	2	3	4
Burdwan ..	52·21	62·25	56·04
Birbhum ...	52·72	60·98	61·78
Bankura ...	50·80	72·21	58·58
Midnapore ...	52·59	72·46	64·76
Hooghly ...	53·82	72·86	54·15
Howrah ...	48·45	69·46	49·13
Divisional average ...	51·76	68·37	57·39

25. The monsoon set in late, but the rainfall was evenly distributed, as in the preceding year, and was favourable to the crops, except in parts of Burdwan and Midnapore, which suffered from floods. The outturn of crops in this division was above the average.

26. In Burdwan the monsoon broke late, and the rainfall in May and June was less than in the preceding year; but this deficiency was more than compensated by the abundant falls in July and August, and the whole area available was planted with paddy. About 500 acres of land in the Kalna subdivision suffered from floods, and the winter rice on the land suffered in consequence. The outturn of the aman crop was over 15 annas, and that of the aus, which is not extensively grown in this district, nearly 14 annas. The rabi crops suffered in part from the rains of October and November, and again from want of water in December. The outturn on the whole was better than that of the preceding year. Mr. Windsor reports that, owing to the obstinate conservatism of the cultivators, the experiment of growing Buxar wheat, which has repeatedly been tried and of which some result might have been expected, proved a failure.

27. In Birbhum too the rains set in late, and the sowings of rice were consequently somewhat retarded. The rainfall was above the average in most parts of the district towards harvest time. The outturn was estimated at 18 annas.

28. In Bankura the monsoon broke about the usual date in June. The rainfall, which was above the average, was evenly distributed. The aman or haimanta rice yielded more than an average outturn, viz. 18 annas. The aus, which is not of much importance in this district, suffered from the heavy rainfall in September, and yielded no more than an average crop of 16 annas. The winter crops suffered more or less from want of rain towards the close of the year, and the outturn was generally below the average. Sugarcane, which is pretty extensively grown in this district, suffered from heavy rainfall and yielded 10 to 12 annas.

29. In Midnapore the rainfall was on the whole seasonable. The outturn of the rice crop was over 12 annas. Excessive rainfall in July injured small areas in Contai and Tamluk, the water not subsiding immediately. The raiyats in the affected parts had no reserve of seed-grain for fresh sowings, and had to buy it at exorbitant rates from outside the district.

30. Mr. Duke, the late Magistrate of Hooghly, has left the following note on the rainfall and crops of that district during 1894-95:—

"The season was one of short but peculiarly timely rainfall. The total rainfall was only 54·15 inches against 72·86 in the previous and 53·82 in the next preceding year. The rains began rather early in June, but were light throughout. By the end of October they stopped, and an apparently full crop was on the ground. Had it matured without further rainfall, it would probably have been very light in the ear. At the beginning of November, however, there was a cyclonic disturbance with exceedingly heavy rainfall * * * * but as a matter of fact I do not believe that 1 anna of damage was done in any part of the district, while in many cases the crop was enormously benefited. It was almost universally acknowledged to be the finest crop taken off the ground for the last 20 years. In the low lands, especially the small local *bils*, and above all in the Dankuni *bil*, the crop was so heavy that the people could not get it cut * * * * This, however, is due not only to the good season, but to the improvement in the drainage system, which previously did not touch that part of the *bil*."

The food-stocks of the district, which had been very low since 1892, are said to have been completely replenished, and rice, and still more straw, which had been extraordinarily dear, are now cheaper than they have been for three years past. The rabi crops, potatoes, and sugarcane yielded good outturns: pulses and mustard were injured in some parts.

31. In Howrah the total rainfall was about 4 inches below the average of the preceding five years, but it was not insufficient. As to the effect of the rain on the crops, it is said that it could not have been better distributed. Both the monsoon crops and the winter rice gave an excellent outturn. The rabi crops suffered from want of rain in February, but there is not much rabi grown in this district. The outturn of the sugarcane was magnificent.

IV.—PUBLIC HEALTH.

32. The following statement shows the number of deaths from different diseases reported during the year 1894 as compared with the preceding two years:—

District.	Population.	Number of deaths from fever.			Number of deaths from cholera.			Number of deaths from bowel-complaints.

* Separate figures not furnished.

It will appear from the above figures that the past year was marked by a large amount of mortality, and all the district officers agree in characterizing it as remarkably unhealthy. As usual, by far the largest number of deaths occurred from fever and cholera. The increase is most marked in the case of Burdwan, Birbhum, and Bankura.

33. In Burdwan the year appears to have been the most unhealthy since 1881. Malarial fever raged throughout the district, except in the Raniganj subdivision, which enjoyed a comparative immunity from this disease. The riparian tract bordering on the Bhagirathi river, especially Dainhat, suffered most. Cholera also visited almost every part of the district, and it is stated that there was not a single month in the year in which deaths from cholera were not registered. Municipal and rural areas were equally affected; parts of the Katwa and the Kalna subdivisions suffering most severely, it is said, on account of the want of good drinking water; small-pox broke out all over the district, and is said to have been imported from Calcutta.

34. In Birbhum the Bolpur thana as usual returned a high mortality from fever, and chiefly for this reason a charitable dispensary was opened there in October 1894. Deaths from cholera increased from 380 in 1893 to 2,517 in the year under report. It raged in epidemic form in the Rampur Hát subdivision, where 1,985 deaths took place from this cause in spite of the efforts of the Subdivisional Officer, Mr. Ainslie, who did all he could to enforce sanitary measures during the outbreak.

35. In Bankura fever appeared in almost all the villages and towns in the district, but disappeared after the cold weather set in. Cholera also broke out in different parts of the district, causing a greater mortality than in the preceding year. Its prevalence was most marked in thanas Gangajalghati and Onda and in the town of Sonamukhi. Special measures were adopted by the Commissioners of the Sonamukhi Municipality in conjunction with the District Board of Bankura, and a native doctor with a stock of medicines was sent out to the affected tracts.

36. In Midnapore fever and cholera prevailed throughout the district, and a wave of influenza during the earlier half of the year added largely to the number of deaths recorded under the head of fever. Cholera appeared as an epidemic over the greater part of the district, but more extensively in the Tamluk and Contai subdivisions, where two extra native doctors and one extra Civil Hospital Assistant were deputed to afford medical aid to the sufferers. The town of Midnapore also was attacked by the disease, the origin of which could not be ascertained, though it was probably introduced by the Puri pilgrims. The Municipal Commissioners took prompt measures to arrest the progress of the disease, but the drinking water-supply could not be easily improved; filthy tanks which could not be adequately protected abounding all over the town. Small-pox, which was said to have been imported from Calcutta, was reported from almost all the thanas in Midnapore.

37. In Hooghly the mortality both from fever and cholera was very large: cholera prevailed in the towns of Hooghly, Jahanabad, and Serampore, and in other parts of the district, but it nowhere assumed an epidemic form. In Serampore it lasted throughout the year, and is said to have been due to the short rainfall of the year and to want of good drinking water.

38. In Howrah the mortality from fever has been increasing slowly during the last three years, but that from cholera in 1894 shows a marked advance as compared with that of the preceding year. Cholera is said to be endemic in this district, but rarely appears in an epidemic form.

Sanitary works.

39. The Municipality of Burdwan spent more than Rs. 8,000 in preliminary operations for extending the water-supply of the town; it also spent a small sum in the preparation of a drainage scheme. The Municipal Commissioners of Dainhat spent Rs. 458 in acquiring land for a tank. The District Board of Burdwan granted Rs. 1,083 to the owners of four tanks towards the cost of re-excavating and cleansing them. Advances under the Land Improvement Act were also made to private individuals for the re-excavation of tanks. One well was sunk and another repaired in a Government estate for the supply of good drinking water to travellers.

40. In Birbhum the Municipal Commissioners of Suri induced the owners of three tanks to reserve them for drinking purposes, and a well has been sunk with the same object. Every village in this district, as well as elsewhere in the division, abounds with cess-pits, which are the hot-beds of disease, and there are no tanks reserved for drinking purposes. Mr. Growse during his cold weather tour tried to induce the proprietors of tanks in many villages to make them over to the District Board for reservation under section 90 of the Local Self-Government Act, but no one came forward to execute and register the necessary deeds of transfer.

41. Bankura is naturally a healthy district, and the town is situated on a ridge between two rivers, consequently the necessity for a regular system of drainage has not been urgently felt. In Sonamukhi, which though well situated is not well drained, steps are being taken to improve the drainage.

42. The Midnapore Municipality made some efforts to carry out suggestions made for sanitary improvements.

43. The conservancy arrangements in the several municipalities of the Hooghly district are said to be good, but much yet remains to be done in improving their sanitary condition. All the municipalities in this district have under consideration schemes of systematic drainage. The Municipality of Serampore has not yet been able to connect the internal drains of the town with the main drainage channel, excavated at a cost of Rs. 20,000, but provision has been made for the purpose in the budget of the current year. There has been great waste of money over this scheme. The want of good drinking water is much felt by people living at some distance from the Hooghly, which is the principal source of water-supply in the riparian municipalities, and this obviously has much to do with the outbreak of cholera in the dry season. The Municipal Commissioners of Hooghly have arranged, in conjunction with the railway authorities, to supply river water to parts of the town; but while these attempts are being made in the towns, no efforts are made to improve the sanitary condition of the rural area. Mr. Dutt remarks that what is wanted is to drain such portions of the country as are water-logged, and then to connect all villages with the main drainage channels and remove all obstruction; but this is obviously a counsel of perfection, and I agree with Mr. Dutt that no systematic attempt in this direction can possibly be made with our present resources.

44. The Magistrate of Howrah has not furnished any information as to the sanitary work carried out by the Municipalities or the District Board in his district.

Vaccination.

45. The following table shows the number of persons vaccinated during the last two years:—

District.	Number of persons vaccinated.	
	1893-94.	1894-95.
1	2	3
Burdwan	32,263	40,275
Birbhum	15,107	22,892
Bankura	31,849	27,928
Midnapore	60,168	64,244
Hooghly	20,561	28,472
Howrah	18,064 (*a*)	24,132 (*a*)
	178,012	207,943

(*a*) Figures for calendar year.

Vaccination has been making fair progress, and every year sees a larger number of persons vaccinated. The increase in the year under report was contributed by all the districts except Bankura, where the prevalence of fever and measles is said to have hindered the progress of the work. The Muhammadans generally, and among Hindus the Ugra Khetryas in Burdwan, still entertain

prejudices against vaccination, but many of the Muhammadans in Howrah came in voluntarily through fear of the epidemic in Calcutta.

46. Calf vaccination was tried in Midnapore, and 72 calves were vaccinated, 63 successfully: 1,890 person swere vaccinated from the calves. There was no opposition on sentimental or religious grounds to calf vaccination in this district. The Magistrates of other districts do not furnish any information under this head, and it is possible that the experiment was not carried on in their districts.

V.—MATERIAL CONDITION OF THE PEOPLE.

47. Except in parts of Midnapore, which were affected by heavy floods in July last, the rice crops produced an abundant harvest throughout the division. As a consequence of this, and of the excellent crops of the two proceeding years, the material condition of the people throughout the division is reported to have been remarkably good. There is no doubt that the rise in the price of rice and other crops has put into the pockets of the cultivating classes an amount of ready money they never possessed before. Evidence of this prosperity is met with in every direction. The standard of living has risen considerably among them, and many things which were formerly accounted as luxuries are now treated as articles of ordinary and every-day use. The labouring classes too have benefited from the growing demand for labour created by the expansion of the coal trade, the increase in the number of factories, and the opening up of new industries.

48. The only classes who do not share in this prosperity are those who have to depend entirely on the small salaries they receive as the wages of skilled labour, specially those who work as clerks and muharrirs in Government and private employ. Debarred from manual labour by custom and tradition, with prices rising, and the purchasing power of the rupee declining, not to mention the ever-increasing difficulties in the way of obtaining work, the struggle for existence in this section of the community is very severe indeed. Of any improvement in their material condition I see very little prospect so long as the army of competitors for clerkly employment is swollen every year by the recruits from our schools and universities, and so long as exaggerated notions of self-importance and excessive devotion to old customs and traditions continue to prevail among these classes, preventing them from seeking a livelihood in occupations which they have hitherto despised, but which, though unfamiliar, are not necessarily degrading and may be made lucrative.

VI.—EMIGRATION AND IMMIGRATION.

49. Emigrants were registered in the districts of Burdwan, Bankura, and Midnapore in considerable numbers, and to a lesser degree in Howrah. The subjoined table shows the numbers registered in each district during the last two years, but these figures take no note of the much more important free emigration.

District.	For the Colonies.						For the Tea Districts.					
	1893-94.			1894-95.			1893-94.			1894-95.		
	Coolies.	Dependants.	Total.	Coolies.	Dependants.	Total.	Coolies.	Dependants.	Total.	Coolies.	Dependants.	Total.
1	2	3	4	5	6	7	8	9	10	11	12	13
Burdwan ...	...	...	642	...	...	21	478	108	586	858	229	1,087
Birbhum ...	...	...	...	...	...	...	...	...	...	...	...	...
Bankura ...	...	...	...	...	...	...	303	208	511	130	79	209
Midnapore ...	...	...	...	...	...	...	387	214	601	357	177	534
Hooghly ...	...	...	...	...	...	...	...	...	...	...	...	...
Howrah ...	...	...	28	28	...	28	...	...	...	...	...	...
Total ...	...	...	670	...	...	49	1,168	530	1,698	1,345	485	1,830

The Magistrate of Burdwan has offered no explanation of two noticeable points in the statistics for his district, viz. (1) the increase in the number of emigrants to the tea districts, and (2) the decrease in that of coolies bound for the colonies. He has, however, pointed out a considerable fall in the number of free emigrants, viz. from 14,000 in 1893-94 to about 5,400 in 1894-95. This decrease is attributed partly to good harvests in the districts from which coolies migrate, and partly to the growing importance of Purulia, Chaibassa, and other western towns, which, being nearer to the recruiting districts, and now on or near a line of rail, are used more and more as centres from which coolies are registered and taken to the tea districts. He adds that while labour is so liberally paid as it now is in the coal mines, iron works, and potteries of Raniganj, inhabitants of the Burdwan district have little or no temptation to emigrate.

50. The Magistrate of Birbhum believes that many bad characters disappear in the guise of emigrants when the surveillance of the police becomes irksome, and the theory is inherently probable, besides being capable of proof.

51. The Magistrate of Bankura attributes the decrease in the number of registered emigrants to the development of the system of free emigration and to the prosperous condition of the people on account of the good harvests they have reaped during the last two years.

52. The Magistrate of Midnapore has offered no explanation of the decrease in his district. It is probably due to the causes mentioned by the Magistrate of Bankura.

54. Statements showing criminal cases connected with emigration, which were prescribed by Government order No. 1848, dated 21st April 1892, have been separately submitted. A large number of cases occurred in Burdwan, but only one of them deserves separate mention. In this case four girls, aged from about 13 to 17 years, and a boy were abducted to Purulia, where they were taken to some depôt, and when rejected there they were taken away to the jungles; here the two youngest were allowed to depart, the rest being for some time concealed in the jungle out of the way of the police, who were searching for them. Out of the four accused persons in this case two were sentenced by the Sessions Court to rigorous imprisonment for two years and one month, a third to two months' rigorous imprisonment, and the fourth was acquitted.

55. During 1894-95 11 rest-houses and 41 cooly depôts were in existence in the districts of this division. With the exception of two rest-houses in Birbhum, which were inspected once only, all the rest-houses and cooly depôts were inspected two or more times. Great attention was paid to the inspection of these depôts in Burdwan, where four of them were inspected more than eight times. The instructions given at inspections are said to have been duly attended to, except in one instance at Raniganj, where Mr. Mackertich, a depôt-holder, did not comply with the suggestions made by the subdivisional officer, to the effect that he should open certain registers and provide separate accommodation for sardari and colonial emigrants until threatened with the cancelment of his license. Local medical practitioners are attached to the depôts in Raniganj and Midnapore to attend to the coolies. No such arrangement exists in the depôts in Bankura. The health of the emigrants was good during the year, and blankets and warm clothing were supplied to them when necessary.

56. There was no registered immigration into any of the districts of this division, but it is a well-known fact that people from the Chota Nagpur Division, Bihar, and the North-Western Provinces come in large numbers to Burdwan, Hooghly, and Howrah. In Burdwan they find employment in the fields at the time of cultivation and harvesting, in brick-making, and in excavating tanks. A considerable portion serve in the mills in the districts of Hooghly and Howrah. These are temporary immigrants, and do not settle in the district.

VII.—PRICES OF FOOD AND LABOUR.

57. Grain was cheap and the prices of labour kept high throughout the year, which things mean unusual prosperity for the labouring classes.

58. The good harvests of the year served to reduce the price of common rice, the average rate for the division during the year having been 17 seers 10 chitaks per rupee against 14 seers 12 chitaks in 1893-94. The average rate in the different localities in the division from which returns were received varied from 13 seers in Hooghly to 21 seers in Contai, the discrepancies being largely due to the sufficiency or the reverse of means of communication. The winter crops, however, were not so universally good as the rice crop, so that the price of wheat and grain ruled higher than in the preceding year.

59. The wages of labour remained almost stationary, except in Howrah, where the rate has increased. The Magistrate of Howrah reports that with an increase in the number of mills and an ever-increasing demand for labour in them, the coolies are becoming independent, so much so that there have been one or two petty strikes. All this tends in his opinion to make wages rise still higher, but he has omitted to add that so long as the supply of labourers continues to be unlimited, as it practically is, this rise must only be temporary: it is impossible in the present state of the labour market to conceive a combined strike for higher wages being successful in the long run.

VIII.—MANUFACTURES AND MINES.

60. The local industries of the division consist of the manufacture of silk, tasar, jute, cotton, molasses, shell-lac, rope, brass and hardware, indigo, paper, pottery and iron.

Silk.

61. The manufacture of silk is carried on to some extent in every district. In Burdwan the industry is flourishing, though unobtrusive, and the value of the outturn has been returned as Rs. 1,66,783 against Rs. 1,62,681 in 1893-94. Birbhum nearly recovered the ground it lost in 1893. In Midnapore the figures for all the factories are not available, but as far as they go they indicate a decline. In Bankura the manufacture of the material called "kutni" is said to be dying out for want of any outside demand for it. Tasar silk is chiefly manufactured in Bankura, Birbhum, and Hooghly, but it is said that the industry is gradually waning.

Jute and cotton.

62. As is well known, there are many large jute mills in the districts of Hooghly and Howrah in which gunny-bags and cloth are manufactured, as well as cotton mills in the latter district. As the figures for all the mills are not available, no comparison of the results with those of the previous year is possible. Out of the four cotton mills in Howrah, the statistics for one have not been received; of the remaining three, one shows a decrease and the other two a large increase in production.

Cotton cloth.

63. Cotton cloth is manufactured in the villages throughout every district of this division. The industry is steadily declining owing to the difficulty found by the weavers in competing with the cheap European goods so largely imported, and it is reported that the weaver caste are taking to other trades. The hât at Ramkrishnapur in the town of Howrah, which is the principal cloth mart in the division, maintained its importance throughout the year. It is said that at this place a lakh of rupees is turned over every hât day.

Molasses.

64. Molasses prepared from sugarcane are manufactured in all districts, but the preparation of those from the date-palm is confined to the districts of Burdwan, Hooghly, and Howrah. Mills of the well-known Bihia pattern are said to be extensively used in pressing sugarcane in Burdwan.

Shell-lac.

65. There was a fall in the industry in Birbhum, but the manufacturers in Bankura appear to have done a good business during the year.

Rope.

66. The outturn of rope, which is manufactured in the districts of Hooghly and Howrah, increased greatly during the year. The two roperies in Howrah turned out Rs. 7,70,400 worth of rope against Rs. 7,35,320 in the preceding year.

Brass, bell-metal, and hardware.

67. The manufacture of these articles is carried on in all the districts of this division. The demand for them is gradually declining in Burdwan and Hooghly. The Magistrate of Burdwan attributes this decadence to the import and use of enamelled utensils or those made of zinc or tin. In the towns of Kharar and Chandrakona in the district of Midnapore the industry is carried on extensively.

Indigo.

68. Indigo, which is manufactured in the districts of Bankura and Midnapore, has partially recovered the check it sustained in 1893.

Paper.

69. Paper is manufactured chiefly in the two mills at Raniganj and Bally: the outturn in the former is gradually increasing; in the latter it has somewhat decreased. In Hooghly 14,450lbs. of hand-made paper were produced.

Pottery.

70. The outturn of the pottery works belonging to Messrs. Burn & Co. at Raniganj is decreasing every year. Bricks, tiles, and pantiles are very largely manufactured on the river bank in the district of Howrah.

Iron.

71. There was a change in the supervising staff of the Barakar Iron Works in the district of Burdwan, and it is reported that an attempt has been made to improve the outturn by new machinery. The amount and value of the outturn of the four iron works in the Howrah district have much increased.

Mats.

72. Mats are manufactured on an extensive scale in the district of Midnapore. Those known as *masland* are the best, and are much valued for their fine make and finish.

73. The preparation of sticks and other articles from ebony is a considerable industry in the Jahanabad subdivision, and *hukas* are largely manufactured in the villages of Begri and Andul in the district of Howrah. Jute twist, fishing nets, cane and bamboo baskets are also manufactured in Howrah and exported in large quantities to Calcutta and elsewhere.

74. The subjoined table shows the outturn of some of the principal articles of manufacture:—

Coal mines.

75. Mining operations are confined to the districts of Burdwan and Bankura. In Burdwan they are carried on very extensively in the Raniganj subdivision; in Bankura only two collieries are worked. The Magistrate of Burdwan reports that the importance of coal mining is steadily increasing. The rise in the price of coal in the Calcutta market has given a great stimulus to the trade. The competition for coal lands has become keener than ever in spite of the exploitation of extensive coal-fields elsewhere; and several more or less serious disputes have ensued between rival claimants. The existing companies are making every endeavour to extend their operations.

76. The visit of Mr. Grundy, the Government Inspector of Mines, to the Raniganj subdivision in the early part of the year is reported to have been a matter of great interest to the mining community, who for the most part are averse to any Government interference by legislation or otherwise. Mr. Windsor thinks that the large companies, with well-paid and experienced managers and with collieries worked on sound principles and equipped with the proper mechanical appliances, can be trusted to maintain a proper efficiency in their own interests; but for private collieries worked by cheap and inexperienced agency and with inferior machinery, he thinks some supervision necessary, especially as the number of these small concerns is increasing. The reports that I have seen of the condition of some of these small mines leave no room for doubt that supervision is urgently required, but I am of opinion that no distinction should be made in the matter of inspection between collieries worked by large companies and those worked by private individuals. This and many other questions will be considered by the Mines Commission now sitting, and need not be further discussed here.

IX.—TRADE AND COMMERCE.

77. The East Indian Railway, passing through every district in the division except Bankura and Midnapore, together with its feeders, the branch line from Sheoraphuli to Tarakeswar and the important road from Raniganj to Midnapore *viâ* Bankura, serves as the main artery of trade and commerce in the division. The Magra-Tarakeswar Railway has been an important addition to the existing facilities for communication. The riparian tracts along the rivers of the division are served by the steamers which regularly ply in the Hooghly and the Rupnarain, and also by country boats. The Midnapore canal, in addition to the service which it renders to the district as an irrigation canal, was largely used throughout the year as one of the principal navigation channels and routes of traffic from the Hooghly to the west and south-west. An important change in the lines of traffic has been caused by the construction of the Bengal-Nagpur Railway, since goods and passengers to and from Purulia and the neighbouring districts no longer pass through Bankura *viâ* Raniganj, and the importance of Bankura as a trade centre has already begun to decline.

78. The principal articles of trade in this division were the same in 1894-95 as in the preceding year, and are as follows:—

Exports.

Rice, paddy, pulses, lime, hides, oilseeds, brass and bell-metal utensils, shell-lac, tasar and silk, coal, potatoes, molasses, timber and paper.

Imports.

European piece-goods, twist and yarn, tobacco, salt, kerosine oil, pulses, spices, ghi, gunny-bags, and food-grains.

79. Statements B to M, as detailed below, prepared in the form prescribed by Government in the Statistical Department circular No. 2 of the 16th April 1895, have been separately submitted to Government:—

(B) The "up" and "down" import and export traffic carried by rail in the districts of Burdwan, Birbhum, and Hooghly.

(C) The import and export traffic of the Kalna and the Katwa subdivisions by road and river.

(D) The import and export boat traffic of the district of Burdwan carried along the Nadia rivers.

(E) The import and export boat traffic of the Hooghly district carried along the Nadia rivers.

(F) The trade of the Hooghly district with Calcutta carried by country boats along the Calcutta and Eastern canals.

(G) The import and export traffic of the Hooghly district carried by country boats along the Midnapore, Hijili, and Orissa Coast canals.

(H) The import and export traffic of the Burdwan district carried by country boats along the Calcutta and Eastern canals.

(I) The import and export traffic of the district of Burdwan carried by country boats along the Midnapore canal.

(J) The import traffic by rail and canal to Howrah.

(K) The export traffic by rail and canal from Howrah.

(L) The import and export traffic of the district of Midnapore by country boats along the Midnapore, Hijili, and the Orissa Coast canals.

(M) The trade of the Midnapore district with Calcutta carried by country boats along the Calcutta and the Eastern canals.

Rice.

80. The exportation of rice was very brisk in Burdwan, a district which exports largely. In Bankura, notwithstanding the plentiful harvests of the past two years, the exportation of rice was limited. When rice is everywhere plentiful and cheap, it is obvious that in districts off the line of rail and with no water routes exportation must fall off. Accordingly, the total quantity exported from Bankura did not exceed 1,40,000 maunds, and, as has been already stated, the glut in the market resulted in the average price of rice being 21 seers per rupee in this district for

the year. In Birbhum the exportation during the year increased by more than 4 lakhs of maunds, due to a succession of good harvests, which the railway has enabled the cultivators to utilize to the full.

81. European piece-goods are largely imported into every district. The supply of kerosine oil is believed to have increased owing to its cheapness and to its having come more than ever into general use. Refined sugar is now imported to a large extent, and the Magistrate of Birbhum reports that the prejudice against it is gradually dying out. The import of tasar cocoons in Burdwan and Bankura has diminished. In Burdwan this is due to purchase of silk thread from Calcutta, and in Bankura to the opening of the Bengal-Nagpur Railway, which, as already pointed out, has diverted the course of traffic with Manbhum and Singhbhum.

X.—ADMINISTRATIVE CHANGES.

82. The following were the principal administrative changes which took place during the year:—

(1) In pursuance of the policy of Government, as contained in its order No. 3020J., dated 23rd July 1894, steps were taken in every district to replace the chaukidars under Regulation XX of 1817 by those under Act VI (B.C.) of 1870. Commissioners under section 58 of Act VI (B.C.) of 1870 were appointed to assist in the resumption and settlement of chakran lands.

(2) Arrangements were made for the formation of Union Committees under the District Boards in all districts of the division.

(3) Steps were taken for the gradual resumption and settlement of ghatwali lands in Bankura, with a view to the ultimate abolition of the ghatwali system in that district.

(4) Two new sub-registry offices were experimentally opened in the district of Burdwan at Jamalpur and Khandghosh.

(5) The experiment of appointing a sardar chaukidar on slightly higher pay to supervise the work of the other chaukidars was tried in Burdwan with success.

(6) A rainfall-registering station was opened at Labhpur in Birbhum.

(7) Two police outposts in the district of Bankura were abolished on the recommendation of the Police Redistribution Committee.

(8) The Municipal Bench at Tamluk was abolished under Government order No. 512J.D., dated 26th May 1894.

(9) An Honorary Magistrate was appointed at Dantun in the district of Midnapore for the disposal of cases under the Puri Lodging-house Act and the bye-laws framed thereunder.

(10) The police outpost of Singti, consisting of 42 villages, was transferred from the jurisdiction of thana Khanakul in the Jahanabad subdivision, district Hooghly, to that of thana Ampta in the Ulubaria subdivision of the Howrah district.

XI.—STATISTICAL ENQUIRIES.

83. The subjoined table shows the reported birth and death-rates per mille in the several districts of this division for the last two years. The figures are for both rural and urban areas combined.

District.	Birth-rate per mille.		Death-rate per mille.	
	1893.	1894.	1893.	1894.
1	2	3	4	5
Burdwan ...	34·79	29·44	26·00	34·59
Birbhum ...	40·62	32·49	29·04	35·95
Bankura ...	32·69	32·6	22·18	30 91
Midnapore ...	31·02	29·2	26·44	27·76
Hooghly ...	35·80	...	31·19	...
Howrah ...	34·34	31·62	25·63	27·49

84. Births and deaths were registered as before by the police. The Magistrate of Burdwan while on tour checked some of the entries in the birth and death registers. The Magistrate and the District Superintendent of Police, Midnapore, inspected the several registering circles in the district. The attention of all district and subdivisional officers will again be called to the necessity of checking these statistics when on tour. Both birth and death-rates are probably much below the real facts, and it is only by continual insistence that we can hope to improve the accuracy of these statistics.

85. The recorded death-rate exceeds the recorded birth-rate in Burdwan, Birbhum, and Hooghly. The Magistrate of Burdwan ascribes the fact to the general bad state of health of the people throughout the district. Mr. Dutt, Magistrate of Hooghly, thinks there must be something wrong in the figures, and considers it improbable that the number of deaths should have exceeded that of births by about 8,000. The Magistrate of Birbhum has made no attempt to explain the figures supplied by him.

86. The increase in the death-rate in 1894 is, Mr. Grierson thinks, due not to increased deaths, but improved registration. He writes: "The registration in the mufassal is in the hands of the police, who are dependent upon the chaukidars. * * * I lay great stress in my thana inspections on good registration of deaths, as if the chaukidars omit to report deaths, they will omit to report other things. The death registration of a thana is therefore a useful index of the degree to which a Sub-Inspector has his chaukidars in hand"

87. I feel certain that the system of registration is gradually improving and receiving more attention on the part of the police, and therefore as regards the registration of both births and deaths there is no doubt that some increase is due to better reporting, but nevertheless the figures afford terrible proof of the unhealthiness of the year 1894, both in the increase of the death-rate and the falling off of the birth-rate, which are observable in conjunction in every district. In an unhealthy year not only do large numbers of potential parents die, but when, as in this division, the prevalent disease is malarial fever, the reproductive powers of the survivors are greatly impaired. Doubtless the effect on births of a bad year is most clearly seen in that which succeeds it, but to a considerable extent the effects are immediate. The theory just stated has been still further illustrated in a paper prepared for the Medical Congress by Surgeon-Captain Dyson, Deputy Sanitary Commissioner in the Panjab, which shows to demonstration the sterilizing effect of subsoil saturation and malarial fever upon the population exposed to those malign influences.

88. The number of prosecutions under Act IV (B.C.) of 1873 was 1 in Burdwan, 44 in Bankura, 104 in Midnapore, and 85 in Hooghly. In Midnapore one of the accused was sentenced to imprisonment.

89. The following statement shows the number of births and deaths registered within municipal areas in the several districts of the division during the last two years:—

District.	Name of Municipality.	Population.	Deaths registered.				Births registered.			
			1893.	1894.	Rate per mille.		1893.	1894.	Rate per mille.	
					1893.	1894.			1893.	1894.
1	2	3	4	5	6	7	8	9	10	11
Burdwan ...	Burdwan	34,447	1,283	1,578	37·24	45·80	926	675	26·88	19·59

90. As these figures have been fully examined in the annual report of the Sanitary Commissioner and the Government Resolution thereon, detailed comment on my part is unnecessary. I would only indicate the following points:—

(*a*) Death registration has been carried out with somewhat greater accuracy. No municipality returns the absurd figures which sometimes disfigure the returns from other parts of the province. Most of the increase, which is practically universal, is doubtless due to the great unhealthiness of the year, but some also is due to better registration. The figures for Ghatal, Tamluk, and Bally are incredibly low, and the attention of the Chairmen of those municipalities will be drawn to the fact. In the face of all that has been written of the insanitary condition of Howrah, it is difficult to believe that its death-rate has been correctly returned at less than 26 per mille; but it has to be remembered that, like Calcutta, Howrah contains a population of which an unusually large proportion is in the prime of life, and that from this town, as from Calcutta, numbers of persons depart when overtaken by illness. The last consideration, however, is itself subject to limitation, for account has to be taken of the considerable number of sick who are brought into the town to die on the banks of the Hooghly. It is difficult to estimate the number of strangers thus dying in Howrah, but the Magistrate considers that it is too large to be neglected, and he is making arrangements to have the information recorded for the current year.

(*b*) The unhealthiness of the year and the special need for sanitary reform in certain places are both denoted by the following death-rates:—

Bhadreswar	...	...	63·59 per mille.
Bansberia	...	...	60·74 ,,
Dainhat	...	...	54·82 ,,
Katwa	...	...	51·05 ,,

while nine others return death-rates of more than 40 per mille, and the divisional

(c) Birth registration has not been so well done. When every allowance has been made for the observations made in paragraph 87 above, which would not apply with so much force to urban as to rural tracts, and when it has been remembered also that in towns an undue proportion of the population consists of males, still it is discreditable to the administration that only five municipalities should return birth-rates of 25 and upwards per mille, while nine of them have the following incredible figures below 20 per mille:—

Bally	... 13·11	Khirpai	... 16·9
Kalna	... 14·25	Baidabati	... 17·13
Raniganj	... 16·19	Midnapore	... 18·1
Chandrakona	... 16·5	Kotrung	... 19·36
		Burdwan ... 19·59	

91. Statistics regarding forecasts of crops, prices of rice and food-grains continued to be collected by Sub Deputy Collectors and kanungoes. Enquiries regarding the import and export traffic were made by the same agency and sometimes by the nazir.

XII.—CIVIL JUSTICE.

92. The District Judges as usual have kindly furnished me with the necessary statistics of the work disposed of by the Civil Courts.

93. There was a decrease in the number of cases disposed of during the year, which was 89,209 against 90,209 in 1893. The decrease occurred in ordinary cases, and is shared by every district except Burdwan. All the districts show an increase in the disposal of Small Cause Court cases. Of the 89,209 cases disposed of during the year, 17,634, or 19·7 per cent., were contested against 17,178 in the preceding year. The following statement shows the number of cases disposed of in the Civil Courts of the several districts of this division during 1894 as compared with those of the preceding year:—

Statement showing the Civil Work disposed of by Judges and Munsifs during the years 1893 *and* 1894.

District.	1893.								1894.								Remarks.

Divisional Total ...	66,987	23,222	17,178	73,031	35,348	42,023	12,838	106,724	64,036	25,183	17,634	71,575	34,553	40,894	14,047	105,048	

It will be seen that while disposals under the head of title suits increased, the number of rent and money suits decided show a decrease. The general decrease in rent cases is presumably due to the prosperous condition of the raiyats and to the good harvests they have reaped, which enabled them to pay their rents without compelling the landlords to resort to legal compulsion. There was an increase in contested cases in all the districts except Birbhum and Midnapore. In Birbhum the figures were 1,891 against 2,016. In Midnapore they were almost stationary. The District Judge of Birbhum has noticed that, with a decrease in the institution of suits under the Tenancy Act, the number of cases defended has also largely diminished. Mr. Gordon writes:—"It is a possible explanation that this may be the result of the settlement and record of rights operation which have been carried on for several years until lately." The reference is to the operations in the Hukmapur and Mollarpur

XIII.—CRIME.

94. During the year under report there was a slight decrease both in cognizable and non-cognizable crime, the figures being 11,534 and 17,219 respectively against 11,586 and 18,540 of the preceding year. In cognizable crime Burdwan and Midnapore show some increase, which is counterbalanced by a decrease in Bankura and Howrah. In the other two districts crime was almost stationary. Greater activity displayed by the police in proceeding against breaches of the Excise and the Arms Act accounts for the increase in cases in Burdwan: in Midnapore it is ascribed to the better reporting of crime.

95. Offences against the person and against property have apparently decreased greatly. Possibly this may be due to the general prosperity of the year, but it is also due, I think, to more accurate reporting and more careful investigation. There were 37 dacoities reported against 62 in the preceding year. I venture to think that many cases of a doubtful character were formerly accepted which, even if true, were only technically dacoity, and had nothing in common with the serious gang robberies properly called dacoities. The decrease is marked in Bankura and Midnapore, where the number of cases fell from 21 and 27 to 6 and 16 respectively. The police of Bankura were not successful in dealing with these cases, which in the opinion of the late Magistrate, Mr. Cornish, require a class of officers decidedly superior to the general run of Sub-Inspectors. In Midnapore some of the gangs of dacoits, one of which had long been carrying on depredations under the protection of a zamindar, were broken up during the year. There was an increase in burglaries and thefts, contributed chiefly by the districts of Midnapore and Howrah. The increase in the former district is ascribed to the better reporting of cases, and in Howrah to the visits of Bediyas and burglars from Calcutta, many of whom were arrested and convicted.

96. In Bankura an organized gang of bad characters, amongst whom were some ghatwals and chaukidars, was detected. Proceedings were taken under section 176, Penal Code, against some, and under section 110, Criminal Procedure Code, against others, and ended successfully.

False cases.

97. Only 697 cases were declared false against 713 in the preceding year. The divisional percentage of false cases to cases reported rose from 3·4 in 1893 to 3·6 in 1894. Prosecutions under section 211, Indian Penal Code, were instituted in 97 cases, of which 27 ended in the conviction of the accused. The result was most lamentable in Burdwan, where out of 11 prosecutions not a single case ended in conviction. In Hooghly there were 2 prosecutions, which were both unsuccessful. There was, however, some improvement in Birbhum and Bankura, where convictions were obtained in 11 cases in the former and 6 cases in the latter district against only a single conviction in each in the preceding year.

98. Mr. Inglis, late Magistrate of Burdwan, remarks:—"The prosecution of charges under section 211 is a vexed question. I have sent up cases for trial myself, and tried many with almost unfailing want of success. It is easy to say a case is false, but very hard to prove it, as, apart from the difficulty in finding convincing proof that the charge is false, we have often to support the prosecution with the evidence of witnesses who will not tell the truth and decline to disclose the cause why the false charge was brought." Mr. Duke, late Magistrate of Hooghly, writes:—"So far as section 211 is concerned, the reasons are not very recondite. The incompetent head constables, with whom so many thanas have been filled during the transition stage, are neither anxious nor able to prosecute complaints under section 211, and accordingly they make a point of stating to begin with that no such prosecution can succeed. Inexperienced Court Sub-Inspectors and new District Superintendents are not in a position to look out for and check this practice, and naturally when the Magistrate does order further enquiry, as has been done in many cases, the police being committed to the opposite view, evidence is not found to support a prosecution." Both these officers have correctly stated some of the reasons why so great a proportion of prosecutions under section 211 fails, but the question is a large one, and is now worn somewhat threadbare. It is held by many officers that prosecutions should be sanctioned or ordered whenever there is a *primâ facie* case, for the reason that even when no conviction is obtained, the expense and inconvenience to which the accused has been exposed will prove a salutary lesson to himself and

to his friends, but the supporters of this view fail to take into account the fact that the prosecutor and his witnesses also undergo much harassment, and that the glory of ultimate victory blinds the public to the precedent inconvenience. On the whole, then, it seems the wiser course to accept the inevitable and to recognize that it is impossible to eradicate by criminal prosecution a fault which has been inherent in oriental nations since the time of the Decalogue.

Compensation under section 560, Criminal Procedure Code.

99. Compensation was awarded in 88 cases only. I consider this result very lamentable and indicative of apathy and timidity on the part of subordinate Magistrates, notwithstanding that their attention was drawn to the subject by the District Magistrates. The propriety of passing orders more frequently under this very useful section will again be brought prominently to their notice.

Remands.

100. More than 51 per cent. of the year's cases were disposed of at the first hearing and less than 10 per cent. remanded more than four times. Hooghly shows the best result, as more than 73 per cent. of the cases tried in that district were disposed of at the first hearing. I am inclined to believe that the insistence of Government upon the disposal of cases without unnecessary delay is at last beginning to bear fruit, and that the business of Magistrates' courts is now usually disposed of with much greater promptitude than formerly, remands being granted only when it is necessary to prove previous convictions or produce other necessary evidence.

Sessions trials.

101. The result of sessions trials was unfavourable, especially in the districts of Bankura and Burdwan, where the percentages of acquittals to cases disposed of rose from 26·92 and 31·25 in 1893 to 38·09 and 53·84 respectively in 1894. The District Superintendents of Police supervised the prosecution personally in a very small number of cases. In Midnapore not a single case was so supervised either before the committing Magistrate or at the sessions. In Mr. Allen's opinion such supervision was in no instance necessary.

Reported cases not enquired into.

102. The number of cases in which the police refused enquiry under section 157, Criminal Procedure Code, has decreased in Burdwan, Bankura, and Hooghly; the other districts show an increase. This section, to use a colloquial expression, is a good servant, but a bad master. On the one hand its provisions are very useful and well calculated to save the police much unnecessary trouble, if properly worked. At the same time it is the duty of Magistrates to see that the power given by it is not abused so as to lead to the easy and wholesale suppression of crime, and I have drawn the attention of some of the district officers to the matter.

Bad livelihood cases.

103. There was a decrease of these cases observable in all the districts of the division; but the results of trials show a decided improvement.

Arms Act.

104. The number of licenses granted under the Act was 11,811 against 11,103 in the preceding year. The increase is shared by all the districts. Arms are generally kept for self-protection or sport, but a considerable number of persons keep them as signs of respectability, while in the more jungly portion of the division, such as parts of Bankura, Birbhum, and Midnapore, they are really wanted to protect the crops against the incursions of wild animals. There were in all 181 prosecutions under sections 19-23 of the Act with 163 convictions against 210 prosecutions with 199 prosecutions in the preceding year. The decrease in prosecutions is no doubt due to some extent to a better appreciation by the people of their responsibilities under the Act, but it is principally attributable to a desire on the part of the district officers to avoid, as far as possible, the institution of prosecutions, which were accordingly confined as a general rule to the worst cases. Out of fines imposed, amounting to Rs. 965, sums aggregating Rs. 186 were granted as rewards in all the districts of the division, except Midnapore, regarding which no information is available. To facilitate the issue of licenses in Form VIII to persons living in the interior, the Magistrate of Burdwan has arranged to forward licenses through the subdivisional officers—a procedure which is being adopted in other districts.

XIV.—POLICE.

105. From the comments made on the subject by district officers, it is very clear either that the police worked with different results in different districts, or that their work was regarded with very different eyes by the various district officers. Mr. Inglis, late Magistrate of Burdwan, observes:—"Charges of bribery and corruption have been brought against a good many of the station officers, and the standard of honesty in the force is far from being an elevated one. Without exception I found station officers incapable of utilizing the services of the chaukidars, whose attendance was the reverse of satisfactory." Mr. Allen, late Magistrate of Midnapore, observes that there was during the year an improvement in the discipline of the force. Mr. Duke, late Magistrate of Hooghly, writes:—"I should be inclined to say that the principal characteristic is want of fibre. The police in Hooghly are perhaps less actively mischievous than in some places, and they are similarly less energetic and interested in their duties here than in some districts." Mr. Growse, late Magistrate of Birbhum, complains of want of enthusiasm on the part of the district police, which he ascribes to want of sympathy between the then District Superintendent and his subordinates—remarks which are endorsed by Mr. Drake-Brockman, the present Magistrate. Mr. Grierson, Magistrate of Howrah, reports that the conduct of the police was on the whole satisfactory. Mr. Vincent, Magistrate of Bankura, also gives the police of his district a good character.

106. To these criticisms I can add no comment of my own, but the following remarks are extracted from the notes left by Mr. Dutt:—

Police.

"The additional grants allotted for improving the police of these provinces are likely to be attended with beneficial results, but the results are not yet apparent. The allowances granted to station officers and to Court Sub-Inspectors are likely to attract a better class of men to these posts. It is a pity that this opportunity was not taken to abolish the post of fifth grade Sub-Inspectors altogether. That grade was, I believe, created some 15 years ago, and had the result of lowering the initial pay of a Sub-Inspector from Rs. 50 to Rs. 30. This, I think, was a move in the wrong direction. With the spread of English education it is possible to get men with some English education on Rs. 30 or even on Rs. 20 a month, but it is not possible to get on that pay the class of men whom we want as Sub-Inspectors and investigating officers. Their duties are very much more responsible than those of a clerk or even of a head-clerk, and require some strength of character, presence of mind, zeal for work, and a great deal of judgment and cleverness. Men possessing such qualifications will not enter service on Rs. 30 a month. If the post of fifth grade Sub-Inspector were abolished altogether, we could hope, by offering Rs. 50 as the initial pay and the allowances now granted, to enlist a superior class of men, such as are wanted for performing the work of station officers and Court Sub-Inspectors. I hope it may yet be found possible to make this change.

107. "Court Sub-Inspectors are expected now to have some legal training and to be able to prosecute cases. District Magistrates generally think that they fail in this duty—at least in important cases. I do not think it possible for these officers, in addition to their other duties, to acquire such a knowledge of law and procedure as will enable them to prosecute important cases before Magistrates when the ablest men in the local Bar are engaged for the defence. It is of importance, therefore, as I remarked in the Annual Administration Report for 1893-94, to appoint junior Government pleaders to prosecute all important cases before subordinate Magistrates. They will be expected to study police papers, to consult the District Magistrate and the District Superintendent of Police, if necessary, and to place before the court all the evidence for the prosecution in the manner in which it should be placed. In the absence of such trained prosecutors, the trying Magistrate often fails to grasp the case for the prosecution, and failure of justice in important cases is often the result.

108. "And lastly I must repeat a remark I made before that the whole police force of a district should be handled and guided more intelligently than is now done. A recent circular of the Government points out and condemns the indiscriminate manner in which fines and punishments are inflicted on police officers, often for trifling reasons, and I am convinced the stopping of this

practice will be productive of much good and will improve the *morale* of the police. On the other hand, really inefficient or dishonest work should be put down more strictly than it is at present. Sub-Inspectors should feel that they are being judged by their work; they should feel a zeal for doing good, honest work, and a confidence that their good work will be appreciated. I have not always found District Superintendents able to inspire their subordinates with this feeling, or to discriminate between good workers and bad workers. And yet I feel sure this could be done, and that by handling the police force with greater intelligence, with more sympathy and consideration, and also with more strictness in all important matters, it would be possible to inspire Sub-Inspectors with a zeal for doing good honest work, which at present does not generally exist."

109. I believe that the removal of the defects pointed out in the foregoing paragraphs depends in a great measure upon the importation into the upper grades of the force of a better class of men, superior in point of social status and education to those which now form the bulk of them. The proposals of the Police Commission will, I trust, if carried out, gradually bring about this result. It is true that the initial pay of a Sub-Inspector, viz. Rs. 30, is in itself not much, but with allowances and fair prospects of promotion it ought to be enough to attract such men as we want. I consider the training school for Sub-Inspectors at Chinsura, to which I paid a visit of inspection in May last, to be an institution of great merit, and likely to improve materially the capacity of our Sub-Inspectors of the future. The cadets are thoroughly instructed in every branch of a Sub-Inspector's duties, and the plan on which this is done is a perfectly sound one. I have every hope that Sub-Inspectors thus trained will be more fitted to act as prosecuting and investigating officers than the generality of those by whom that duty is now being performed. I attach much importance to a considerate and sympathetic treatment of their subordinates by District Superintendents, not only for the sake of those already employed in the service, but as a means of attracting a better class of recruits. The matter is receiving attention at the hands of District Magistrates and District Superintendents throughout the division; and although complete figures on the subject are not available, unnecessary and inordinately severe punishments are as a rule avoided.

Rural police.

110. Commissioners under section 58 of Act VI of 1870 for the resumption of chaukidari lands have been appointed, and some progress in this matter has been made in every district of the division, though the progress is not everywhere so great as it might have been. In Burdwan the number of Regulation chaukidars of all designations was 10,495, and that of Act VI chaukidars 328 up to the end of the calendar year. The Magistrate fears that on the abolition of the Regulation chaukidars they will be dispossessed of their lands by the zamindars, but this should not have prevented his predecessor from carrying out the transformation with greater vigour than he did. In Midnapore there were 4,400 Act VI chaukidars against 5,000 chaukidars, paiks, &c., under the Regulations. The pharidari lands are being resumed on the lines followed in Hooghly. In Bankura there were 1,773 chaukidars under Act VI and 801 under the Regulations, besides a large number of ghatwals employed, mostly as road patrols. In Birbhum Act VI was introduced into 72 out of 2,625 villages and the lands of 220 chaukidars were resumed. There were 758 chaukidars under Act VI and 5,538 under Regulation XX. In Hooghly 289 Act VI chaukidars were appointed during 1894 and 92 chakran chaukidars abolished.

111. There is a strong consensus of opinion as to the inefficiency and incompetence of the Regulation chaukidars. The only officer who differs from this view is Mr. Grierson, the Magistrate of Howrah, who considers Regulation chaukidars are best suited—at least for Howrah. He adds that "the best-worked thanas are those in which there are most chakran chaukidars."

112. The inutility of the ghatwali system, which exists in Burdwan, Bankura, and Birbhum, has long been recognized, and steps were taken during the year towards the resumption of the ghatwali lands in Bankura. These operations are still in progress, and it is hoped that by the end of the current year the obsolete, inconvenient, and useless ghatwali system may have been terminated in this district—at any rate in what are known as the "43 sarkari" ghâts.

113. The following remarks on the rural police are quoted from Mr. Dutt's notes:—

Ghatwals.

"The ghatwals are scarcely rural police; they were appointed over a century ago to protect the country from Mahratta invaders and local bad characters, and lands were assigned for the service. The necessity for the institution has long ceased to exist, and the ghatwals have long degenerated into an idle, good-for-nothing class, and much of the dacoities and robberies in some districts like Bankura is attributed to them or to their connivance. District Officers have recommended the abolition of the service for over a quarter of a century, and the first practical steps for carrying this recommendation into effect have been taken within the year under report. It is unnecessary to repeat here all that has been said in special reports on the subject as regards the measures which have been adopted. Briefly, our plan is this: The lands which were detached from zamindaries for the maintenance of ghatwals are to be re-attached to the parent estates; the present ghatwals are to hold these lands on payment of a rent to the zamindars in lieu of the service now required of them; and one-half of the rental so obtained is to be paid by the zamindars to Government as the value of the service to which Government was entitled from the ghatwals. A Special Deputy Collector has been appointed to Bankura district to carry on work on these lines, and the completion of the work in two ghats in the district, viz. *Bankadaha* and *Jaybelia*, was reported before the end of the year."

XV.—CRIMINAL JUSTICE.

114. The total number of cases disposed of by the Stipendiary as well as the Honorary Magistrates was 23,531 against 25,166 in the preceding year; the latter disposing of over 37 per cent. of the total number. Out of 29,411 accused in the above cases, 20,470, or 69·5 per cent., were convicted against 68·6 per cent. in the preceding year. The subjoined tables show the number of cases decided by the Stipendiary and the Honorary Magistrates in each district and subdivision and the results of those cases:—

A.—*Cases before Stipendiary Magistrates.*

District.	Subdivision.	Number of officers.	Cases disposed of.	Persons disposed of.	Ratio per cent. of persons convicted to those disposed of.	Number of witnesses examined.	Ratio per cent. of witnesses detained over two days to total number examined.	Ratio per cent. of decisions confirmed in appeal to total appeals.	Number of A cases disposed of.	Number remanded six times and more.	Average number of cases disposed of per officer.	Average number of witnesses examined in each case.	Ratio per cent. of column 11 to column 10.

	Divisional Total for 1893.	46	11,509	12,415	78·03	14,676	5·5	56·9	39	1	236·3	1·2	2·5

115. It will be seen from the above tables that the percentage of convictions in cases tried by Stipendiary Magistrates was more favourable, as is usually the case, than that in cases tried by Honorary Magistrates. The percentage in the former varies from 47·6 to 84·5, while in the latter it ranges from 28·5 to 89·8. The worst percentage was returned by the Bankura Sadar Bench. The percentages returned by the Kalna, the Rampur Hát, the Vishnupur and the Tamluk Benches are also bad, being much below 50. The best results are shown both by the Stipendiary and the Honorary Magistrates at Howrah. The unsatisfactory result of trials by the Benches in the district of Bankura is said to be mainly due to the fact that most of the cases made over to them were of a petty nature and were often compounded either in or out of Court, but the Magistrate also notices an undue tendency to acquit.

116. The number of witnesses examined during the year was 58,455, of whom 2,267, or a little over 3 per cent., were detained over two days against 4·3 in the preceding year. The Stipendiary Magistrates detained 3·7 per cent. and the Honorary Magistrates 4·4 per cent. of the witnesses for more than two days. These figures indicate an improvement as compared with the previous year, and show that with a few exceptions the Magistrates generally take care to discharge a witness on his first appearance. The Benches in the districts of Burdwan and Bankura show a tendency to procrastinate proceedings, which is by no means commendable. The Magistrate of Bankura explains that this state of things was chiefly brought about by the absence on account of illness or other cause of particular Honorary Magistrates who partly heard some of the cases.

117. The Benches at the head-quarter stations of Burdwan and Howrah sat daily during the year.

Benches.

118. The abolition of the Hooghly and the Bansberia Municipal Benches and their amalgamation with the Hooghly General Bench was effected on the 1st May 1894. The first

and second Benches at Serampore were reconstituted and additional Honorary Magistrates were appointed. The Municipal Benches at Midnapore, Tamluk, and Ghattal were abolished during the year. The practice of forming a dependent Bench at Contai by detaching some of the Honorary Magistrates of the independent Bench with a Stipendiary Magistrate to preside over them has been discontinued.

119. The following summary shows the attendance of the Honorary Magistrates of each Bench in the districts of this Division during the year:—

District.	Number of times the Honorary Magistrates were asked to attend.	Number of times they actually attended.	Number of times they were absent — With leave or notice.	Number of times they were absent — Without leave or notice.	Number of times they were absent — Total.	Percentage of attendance to summons.	Remarks.
1	2	3	4	5	6	7	8
Burdwan	2,108	1,230	246	633	878	58·3	* The difference between the figures in column 2 and those in columns 5 and 6 is due to attendance over invitations by three Honorary Magistrates.
Birbhum	424	353	28	43	71	83·2	
Bankura	815	516*	59	248	307	63·5	
Midnapore	1,856	1,114	307	435	742	60·	
Hooghly	2,237	1,772	265	190	455	79·5	
Howrah	1,718	1,072	142	504	646	62·3	
Divisional Total for 1894	9,148	6,059	1,046	2,053	3,099	66·2	
Do. for 1893 ...	10,904	7,261	1,117	2,501	3,018	66·5	

As noticed last year, there has been a gradual improvement in the attendance of Honorary Magistrates in all the districts, except Bankura and Howrah, which show a falling off. The attention of Honorary Magistrates has been repeatedly drawn to the necessity of regular attendance and to the inconvenience caused to their colleagues and to parties and witnesses by their absence without previous intimation, but I regret to observe that the number of absences without leave or notice far exceeds that of those with leave or after notice. Some of the Honorary Magistrates in Bankura and Howrah continued to be irregular in attendance, notwithstanding the repeated warnings of the District Officers, and in Howrah several of these gentlemen have since resigned at Mr. Grierson's suggestion. There are, however, many honourable exceptions, among whom may be mentioned Shahzada Amiruddin Mohammed and Babus Kedar Nath Nath and Bhudeb Chatterjee, whom the Magistrate of Hooghly commends for the regularity of their attendance and the zeal displayed by them in their work. On the whole, the Honorary Magistrates worked well during the year. They took a fair share in the criminal administration of the Division and rendered very useful assistance by relieving Stipendiary Magistrates of a large amount of work. I have no doubt that the quality of their work will improve with experience, and that in time it will be possible to entrust them generally with larger powers than is now the case.

120. Mr. Duke, Magistrate of Hooghly, brought to notice the difficulty of getting police officers well up in law and experience to prosecute cases before the Magistrates. This difficulty, which is also felt elsewhere, is due to the fact that frequently just as a Court Sub-Inspector acquires sufficient experience to be useful and really efficient in this duty, his turn for promotion comes, and he is transferred to some other post. More than one scheme has been proposed to remove the difficulty, and the matter is still under consideration: separate proposals will be submitted if I find them to be necessary.

Fines.

121. Fines amounting to Rs. 93,271 were imposed during the year against Rs. 96,219 in the preceding year. Including Rs. 34,284, which sum represents the balance outstanding at the close of the year 1893, the total realisable demand amounted to Rs. 1,27,555, of which Rs. 80,406 were realised and Rs. 17,301 remitted during the year, leaving an outstanding balance of Rs. 29,848 at its close. Midnapore shows the heaviest balance of unrealised fines. A large portion of the fines imposed in excise cases in Bankura and Hooghly will have to be written off as irrecoverable. Mr. Vincent, Magistrate of Bankura, observes that he has found the punishments imposed in these cases as a rule unduly light and frequently inadequate. He

recommends that the Excise Act should be so amended as to render imprisonment awardable for a first offence. He adds that the majority of the offenders in his district are fined, and go to jail when unable to pay the fines, and that all subsequent attempts to realise them necessarily entail great hardship on their families. Mr. Dutt, Magistrate of Hooghly, also mentions that the defaulters are often men of no substance and have no assets, and that as the offenders in opium cases are generally residents of French Chandernagore, it is difficult to realise the fines due from them. No explanation has been offered by the Magistrate of Midnapore of the heavy outstanding balance in his district. I have drawn the attention of the Magistrates to this matter, and have asked them to write off after proper enquiry fines which are really irrecoverable.

XVI.—REGISTRATION OF DEEDS.

122. The subjoined table shows at a glance the chief features of the administration of the Registration Department in the various districts of this Division during each of the last two years:—

District.	1893-94.				1894-95.			
	Number of deeds registered.	Receipts.	Expenditure.	Surplus credit to Government.	Number of deeds registered.	Receipts.	Expenditure.	Surplus credit to Government.
1	2	3	4	5	6	7	8	9
		Rs.	Rs.	Rs.		Rs.	Rs.	Rs.
Burdwan	34,599	41,102	24,661	16,501	36,774	41,517	25,491	16,026
Birbhum	17,014	18,764	10,568	8,196	17,578	18,647	10,623	8,024
Bankura	23,689	24,835	15,454	9,381	22,507	22,212	14,325	7,887
Midnapore	65,422	62,001	35,883	26,178	67,922	61,541	38,365	23,176
Hooghly	26,276	29,712	18,653	11,059	28,284	30,216	19,903	10,313
Howrah	17,087	22,005	11,091	11,814	18,484	21,206	11,034	10,172
Total ...	185,187	1,99,439	1,16,310	83,129	191,540	1,95,339	1,19,741	75,598

123. The figures show a steady increase in the number of deeds. The increase during the year under report was contributed by all the districts, except Bankura, which shows a decrease. In the absence of any special cause for this advance, we may be permitted to fall back upon the stock explanation that the increase is due generally to the greater appreciation by the public of the advantages of registration, and in particular in Burdwan to the facility for registration afforded by the opening of two more registry offices. The reduction of the *ad valorem* fees from 12 to 8 annas may also partly account for the increase in the number of registrations, though I personally do not believe that the 4 annas which have now been taken off ever deterred any one who wished to do so from registering a deed. The decrease in the number of registrations in Bankura is probably one of the results of the good harvests of the year and the consequent diminution of loan transactions.

124. There was a falling off in the receipts in all the districts, except Burdwan and Hooghly, due to reduction of the *ad valorem* fee. The increased expenditure in Burdwan, Midnapore, and Hooghly is accounted for by the increased rate of commission allowed to Sub-Registrars for the large number of deeds registered during the year and also by the entertainment in Hooghly of extra establishment under Registration Circular No. 22 of 1893.

125. The system of taking thumb impressions to secure identification of the executants has been tried in some offices, and the cautious opinion is offered that in time it may prove efficacious. It has been so conspicuously successful in the identification of criminals that I have no doubt whatever that it should be

largely used in the Registration Department. In this connection it is interesting to notice that a conviction in a case of false personation at the Goghat sub-registry office in the Jahanabad subdivision was obtained mainly on the thumb impression of the accused. Another case of false personation occurred in Birbhum, in which the two persons implicated have been convicted.

XVII.—CONDITION OF THE DIVISION AS REGARDS LAND AND LAND REVENUE ADMINISTRATION.

126. There was no change in the system of administering the land revenue. The total number of estates exceeded that of the previous year by 25, the increase being chiefly due to the resumption and settlement of *pharidari* lands in Burdwan and Hooghly. The total demand in the several districts of the Division was Rs. 86,31,768, of which Rs. 82,47,986 were collected and Rs. 7,725 remitted, leaving a balance of Rs. 3,76,057. The percentage of total collection on total demand was practically the same as that of 1893-94, being 95·5 against 95·2. The percentage of collections in Burdwan, Birbhum, and Bankura was over 99 per cent. In Hooghly it fell from 97 to 96·8, while in Midnapore it was only 88·1 per cent. The falling off in Hooghly was nominal, being due to a sum of Rs. 20,021 having been received by transfer receipt too late to be credited within the year. The decrease in Midnapore was chiefly in class III (estates under direct management), and is attributed partly to the failure of the winter paddy in certain khas mahals in consequence of heavy rainfall and partly to bad collections. I am inclined to think that the present system of collection in these properties requires reform.

127. The following remarks on the khas mahals in the Division are quoted from the notes left by Mr. Dutt :—

Khas mahals.

"The number of khas mahals in Hooghly district, including Howrah, is over 300, and proposals have been submitted for the sale of 240 of these and the partial sale of 4. The largest estate in the Division under our direct administration is the Majnamutha estate in Midnapore. The collection work is in the hands of a special officer, who works under the supervision of the Subdivisional Officer. A difficulty in the realisation of arrears arises from the fact that transfers of holdings effected by raiyats are not registered by them, and our registers are therefore not up to date. When we take out a certificate against a defaulter according to the name recorded in our registers, we often find that the man named has long ceased to be the owner of the holding. The certificate under the circumstances is valueless, because only the right and interest of the judgment-debtor named in a certificate (and not the holding) can be sold in execution thereof. Both Mr. Power and I were of opinion that in such cases we should go to the Civil Court and get rent decrees to sell up the holdings, and the Subdivisional Officer of Contai has been advised accordingly. In spite of these and other difficulties the Subdivisional Officer, Babu Jaga Bandhu Bhattacharjee, has successfully administered this large Government estate, and manages one of the heaviest subdivisions in Bengal with great ability, vigour and judgment."

128. The number of estates and shares of estates in this Division governed by the sale laws was 21,192, and taking the number of instalments in which their revenue was payable at about three each, the number of opportunities for default was about 60,000. In only 1,387 instances, or 2 per cent. of the whole, did estates and shares of estates became liable to sale during the year for non-payment of Government dues. Out of this number only 123, or 8·8 were actually sold against 137, or 7·6 per cent., in the previous year. These figures show that the sale laws were administered in the Division with great, if not excessive, moderation.

Road and public works cesses.

129. The cess demand during the year was Rs. 10,97,705 against Rs. 10,59,814 in 1893-94, showing an increase of Rs. 37,891. The demand increased in the districts of Burdwan, Birbhum, and Hooghly, and decreased in Bankura and Midnapore. The increase in Burdwan is mainly due to an increase in the demand from coal mines and in Birbhum and Hooghly to the revaluations having been given

effect to last year. The demand in Hooghly will undergo some change when all objections against double assessments, increased assessments, &c., have been disposed of. The decrease in Bankura is too small to call for any explanation, and that in Midnapore is ascribed to permanent abatements. The total collections show some improvement; the percentage of balance was reduced from 19·2 to 18·9. The improvement is confined to the districts of Birbhum, Bankura, and Midnapore; Burdwan and Hooghly showing a falling off in the collections. No satisfactory explanation has been given of the decrease in the former district. In Hooghly it is said to be due to the inclusion at the last revaluation of rent-free holdings paying cess up to one rupee in Part IV of the zamindars' returns. In the case of many such holdings no payments have yet been made either by the zamindars or by the owners of the holdings. The latter have been directed not to pay cess into the treasury direct, while the zamindars do not seem to have received any revised or additional rolls for holdings thus included, so that they are ignorant of what they have to pay on account of them.

130. I reproduce below the remarks which Mr. Dutt has left on the revaluation operations in the Division:—

Road cess revaluation.

"The work of revaluation had been completed in Birbhum and Hooghly before the commencement of the year under report, and was in progress during the year in Burdwan, Bankura, and Midnapore. It was completed in Burdwan within the year.

"Advantage was taken of this revaluation to incorporate all petty rent-free tenures of the annual value of less than Rs. 100 in some districts and of less than Rs. 50 in other districts in the parent estates. In Birbhum, I believe, such tenures of all values have been so incorporated, while in Hooghly only tenures of the annual value of less than Rs. 16 have been incorporated.

"The inclusion of petty tenures in the parent estates is a move in the right direction. It saves us the trouble of collecting small cesses from tens of thousands of tenure-holders, and it saves the tenure-holders from much harassment consequent on our system of collection. In Burdwan district the number of such petty rent-free tenures was said to be about 40,000, but many of these tenures, reckoned as single tenures, comprised lands in different villages, and if each separate holding was separately numbered, the total number would probably come to a 100,000. It is perfectly obvious that our system is unsuited to the task of realising small cesses from such enormous numbers of petty tenure-holders in each district, and the best thing under the circumstances was to include the petty holdings in the parent estates, and this has been done.

"I only regret that this has not been done in Hooghly district to the same extent as in other districts. As I have stated above, only tenures under the annual value of Rs. 16 have been included in the parent estates in Hooghly, and this leaves on our hands the task of collecting cesses from about 16,000 tenure-holders, paying one rupee or upwards annually as cesses. The thing was done before the commencement of the year under report, but the facts have since been brought to the notice of the Board of Revenue, and the question of re-opening the work with a view to the inclusion of the petty tenures up to the value of Rs. 40 is now under consideration.

"In Bankura district it came out during my inspection of the revaluation office that the Deputy Collector, Babu Bipin Bihari Pramanik, had in numerous instances treated petty cultivating raiyats as tenure-holders for the purposes of the revaluation. This brought about an increase in the assessment, but was wholly illegal; and under the orders of the Board of Revenue the mistake is now under correction. Suspecting that the same incorrect procedure might have been followed in other districts also, I issued the requisite instructions to all District Officers. When I visited Midnapore district some months after this, I noticed with regret that the Deputy Collector, Babu Jagat Chandra Shome, had not only made the same mistake as had been committed in Bankura, but that he had persisted in the mistake in spite of the instructions issued. Babu Jagat Chandra had left the district before my arrival there, and the explanation he forwarded to me was wholly unsatisfactory. I directed the mistakes to be corrected by his successor.

"I have stated before that the revaluation work has been completed in Birbhum, Hooghly, and Burdwan. The work is expected to be completed in Bankura and Midnapore within the current year."

131. With reference to the above remarks it remains for me to add that Mr. Duke, the late Collector of Hooghly, has in an able, thorough and lucid memorandum successfully defended the system pursued in his district for assessing petty tenures, and has shown to the complete satisfaction of the Board that a revision of the assessments so as to include in the parent estates a larger number of petty tenures is both unnecessary and inadvisable. It should also be added that further enquiries into the revaluation proceedings in Midnapore have disclosed more irregularities which have been reported to the Board of Revenue for orders. I fear that the correction of them, which must be undertaken, will still further delay the revaluation of this important district.

Irregularity in the tauzi accounts of Burdwan and Hooghly.

132. The examination of the tauzi accounts in Burdwan and Hooghly, which is being conducted by a special establishment sanctioned for the purpose, has brought to light numerous mistakes and frauds in making entries and carrying forward balances in the estates ledger. The result of the enquiries, so far as they have proceeded, has been to show that large amounts are due to Government both on account of short payments and of misappropriations.

133. As an instance of these, it may be mentioned that the Hon'ble Mr. C. C. Stevens, the Senior Member of the Board, when inspecting during March 1895 the working of the special establishment entertained in Hooghly, found that the accounts of two estates belonging to the French Government showed regular credits of land revenue in 1883-84, 1884-85, and 1885-86 in the ledger, but no corresponding credits in the accountant's register of land revenue receipts. The register of letters issued showed that receipts were given to the French Government from the tauzi office. On further examination of the accounts of these two estates the Collector reports that revenue was paid by the French Government in accordance with the following procedure. After the close of every quarter the treasury officer used to write a letter to the French Government enclosing a receipt for the amount of revenue due, and asking that the amount might be paid to the tauzi navis who was the bearer of the letter, and whose duty it then was to bring the money and credit it into the treasury. The payments on account of these estates as shown by the tauzi navis in the ledger are not traceable in the accountant's register of land revenue receipts—a fact which leaves little room for doubt that the money, though actually realised, has been misappropriated by the tauzi navis, and not paid into the treasury. The total amount realisable on account of these estates from 1881-82 to 1892-93 is Rs. 16,005, of which only Rs. 8,832 have been traced as credited into the treasury in the accountant's register of Land Revenue receipts. The difference, viz. Rs. 7,173, is evidently the amount misappropriated. The Board have recently authorised the institution of criminal proceedings against those concerned in receiving the money from the French Government. The result will be reported in due course.

Settlements.

134. No important settlement of Government estates was effected during the year. The settlement of the 18 temporarily-settled estates of Pataspur in the district of Midnapore under Chapter X of the Bengal Tenancy Act is still in progress. The settlement of the ghatwali lands in Bankura was undertaken during the year under the supervision of a Deputy Collector. This settlement is one of great interest and importance, as it aims at nothing less than the abolition of the old service tenures by which the ghatwals have held their lands for about a century, the substitution of ordinary village police in place of the ghatwals, and the settlement of the service lands with the zamindar, the ghatwal dropping into the status of an ordinary raiyat in most cases with occupancy rights. By the introduction of the Village Chaukidari Act VI (B.C.) of 1870, chakran lands are being transferred to zamindars in all districts. As has already been noticed in paragraph 110 above, the process of conversion has not been so rapid as it should have been in some districts.

Public Demands Recovery Act.

135. The number of certificates pending from the previous year was 23,325; the number filed during the year was 28,761 against 30,711 in the preceding year, showing a

decrease of 1,950 cases, or over 6 per cent. The decrease occurred in all classes of demands except those under section 5 and for rent due to Government. The decrease was confined to the districts of Burdwan and Birbhum. In the former the institutions fell from 9,559 to 3,086 during the year. This large decrease is attributed to the restrictions imposed on the issue of requisitions for the recovery of arrears of cesses due from petty rent-free holdings. The disposals were in advance of the institutions in those two districts, but the reverse was the case in other districts. It is satisfactory to notice that out of 29,857 cases disposed of recourse was had to the extreme measure of sale in 465 cases only, which is equivalent to a percentage of 1·89. In nearly 30 per cent. of the cases in which certificates were issued, the demands were satisfied on mere issue of notices.

136. Mr. Dutt has left the following remarks on the working of the Act:—

"The principal defects in the working of this Act were pointed out by me in the Annual Administration Report for 1893-94. Provisions have been made in the amended Act, which has lately been passed by the Bengal Council, to remove these defects. To prevent the indiscriminate issue of certificates, a provision has been made requiring the Certificate Officer to satisfy himself as to the justness of the demand in each case, and it is proposed to issue executive orders requiring a post-card to be sent to the defaulter before a certificate is made. The District Collector has also been allowed some discretion in the service of notices, and, if he thinks fit to do so, he can direct that such notices will be issued through the post office."

Partitions.

137. Operations under the Partition Act are practically unknown in this Division. Three cases were instituted, however, during the year in Burdwan. Out of the two cases pending in Hooghly from previous years, the final report of one has recently been received, and the other instituted in 1892-93 is still pending.

Land registration.

138. The number of applications during the year was 3,135 against 3,387 in 1893-94. The decrease was principally in Bankura, where it fell from 664 to 393. This decrease is attributed to measures taken in previous years to enforce registration of changes of interest, but this explanation assumes that there is some relation between the number of transfers and the number of registrations. I fear that there is nothing of the kind, and the negligence of proprietors in registering their names is illustrated by the fact that over 200 notices had to be issued under section 65 of the Land Registration Act in each of the districts of Burdwan, Midnapore and Hooghly. When it is remembered that these were cases in which the transfer had come to the Collector's notice, it may be inferred how great is the number of transfers of which he has no cognizance. I am glad to be able to report that Sub-Registrars have reported a large number of omissions to apply in time for registration. Several cases also were reported by Deputy Collectors in charge of road cess and land registration, but a few cases only were brought to notice by the Civil Courts. The fees realised in the Division during the year amounted to Rs. 748.

Land acquisition.

139. Act X of 1870 was repealed in March 1894 by Act I of 1894. Proceedings for the acquisition of a total of 99 acres of land in the several districts of this Division were confirmed by the Board. The most important of the projects in which proceedings were confirmed are noted in the margin. The total cost of acquisition was Rs. 55,096. Annual abatements of revenue, amounting to Rs. 17-4-10, were allowed on account of land acquired for Government, and Rs. 1-13-9 and Rs. 2-5-6 in respect of land acquired for municipalities and railways, respectively. The average cost per acre of land was Rs. 556 against Rs. 470 in the preceding year. The increase in the average was due to the high price (Rs. 33,552) paid in one case for 30 acres of land required at Asansol, partly for a rest camp, and partly for the staff quarters of the Bengal-Nagpur Railway. During the proceedings for the acquisition of a parcel of land in Serampore required for the intake of the Howrah water-works, Mr. Graham, a Barrister-at-Law, and a tenant of premises which had to be acquired,

1. Rest camp at Asansol.
2. Staff quarters at Asansol, Bengal-Nagpur Railway.
3. Burjola section of the Rajapur drainage scheme.
4. Construction of a channel from Kumral sluice to Gopinagore.
5. Railway station at Radhanagore.

contested the validity of the proceedings, on the ground that the notice served upon him was written in an old form and the heading "Act X of 1870" was not corrected. The matter was referred to the Legal Remembrancer, and on the receipt of his opinion that the proceedings were legal, possession was taken of the house. Mr. Graham has further sent notice of suit against Mr. Duke, the late Collector of Hooghly, and Mr. Fischer, late Subdivisional Officer of Serampore, claiming damages for trespass and other misdemeanours.

Working of the Bengal Tenancy Act.

140. The Act seems to have worked smoothly and without incident in all the districts of this Division, except Midnapore, where there was a considerable amount of activity in applying under section 40 for the commutation of rents in kind to money rents. Mr. Whitmore, late District Judge of Birbhum, remarks:—"Hitherto, every year, since the passing of the Tenancy Act, has yielded a higher and still higher percentage of defended suits to undefended, but a change took place in the year under review. Not only was there a smaller number of institutions, but there was also a falling off in the proportion of defended cases." This may be the result of the settlement and record of rights which have been carried on for several years.

141. As noticed above, the number of applications filed under section 40 of the Act was very large in Midnapore, being 250 against 2 in the preceding year. As far as I can discover no dispute between landlord and tenant set the current of agricultural feeling in this direction, but the increase in institutions appears to be due to the fact that the rates of money rent fixed in certain of the earlier cases were considered to be advantageous to the raiyats, and a rush was made to take advantage of what were considered the favourable provisions of this section. These cases have aroused a good deal of interest in Midnapore, and, as Mr. Bompas who tried most of them has pointed out, seem likely to produce an agricultural revolution in the district. Appeals have been filed in about 50 per cent. of these cases, and, as most of them are pending in my Court, it would be improper for me to offer any further remarks on the merits of the movement. I may add, however, that to the best of my belief the raiyat has been the original applicant in every instance, and the appellant has usually been the landlord.

142. Mr. Dutt has left the following remarks on the general working of the Act in the Division:—

"In my report for the Burdwan Division for the year 1893-94, I brought to the notice of Government some instances in which the insecurity of a raiyat's right to his homestead land had come prominently to notice. A further enquiry into the matter was directed, and the facts, as far as they have been ascertained, have been now placed before the Board of Revenue.

"There were many applications during the year for survey and settlement under the Tenancy Act. Most of these applications were for the survey of very small areas, sometimes only a few hundred bighas, and often comprising scattered plots away from the district head-quarters. It does not seem that zamindars are anxious to have large estates surveyed under the provisions of the law, and the obvious inference is that no real difficulty in settling and realising rents is generally felt in these parts. It is only in cases of petty villages where a dispute has been going on, or where the landlord is a newcomer or an auction-purchaser, that the assistance of the law is invoked.

"The number of applications for the commutation of rents into money suddenly increased in Midnapore district during the last cold weather, and a large number of appeals were filed from the judgment of the lower Court to the Commissioner. Such cases are expected to multiply in backward parts where rent is still paid in kind. The price of paddy increases as new means of communication are opened out, and it is to the interest of the cultivator to have the rent commuted into money once for all."

Embankments.

143. No work of importance coming under the description of embankments was executed in any of the districts of this Division during 1894-95. In Birbhum out of the total cost of Rs. 1,777 advanced for the repair of a schedule D embankment at Muhammad Bazar, the instalments recoverable during the year, viz. Rs. 71 principal and Rs. 94 interest, were realised. In Bankura an embankment constructed by certain zamindars within the prohibited area of the Damodar

embankment was removed during the year. In Midnapore the charges incurred in maintaining embankments are recovered from zamindars under the contract system as well as under the Embankment Act. The period of the first contract for 20 years expired in 1893-94, and an extension of the system over a further period of seven years from 1894-95 has been sanctioned, but has not yet come into operation. In Hooghly out of Rs. 24,867 realisable on account of certain works, Rs. 618 were realised from the recorded proprietors. Rupees 995 due from the Burdwan Raj estate will be adjusted under the agreement with the proprietor of that estate, and the balance is in course of realisation.

Drainage.

144. There are four drainage schemes in this Division, all in the district of Hooghly, viz., those of Dankuni, Howrah, Rajapur, and Amta. The first three have been completed, and the last is still under the consideration of the Public Works Department.

Dankuni scheme.

145. The not recoverable demand on account of the original cost including maintenance charges up to the time of capitalisation was Rs. 5,06,642: this sum was collected about two years ago, and the accounts which were in great confusion were examined and adjusted, except in two cases which are still pending. As soon as these two cases have been disposed of the accounts of the original cost will be finally closed. The capitalised maintenance charges of this project were Rs. 65,344, of which the sum of Rs. 60,923 was collected between January 1891 and March 1895. The collection of the balance will be made within the estimated period of six years allowed for the purpose.

Howrah scheme.

146. The net recoverable demand both for original cost and capitalised maintenance charges was Rs. 5,24,924, and the amount collected up to the close of March 1895 was Rs. 53,992, the amount covered by engagements being Rs. 1,31,969. The payments due on account of the petty rent-free holdings included in this project have been assessed on the zamindars under the provisions of section 50 of the Drainage Act, but an appeal against assessment on this principle has been preferred by Maharaja Sir Jotendra Mohan Tagore, and is pending before the Board. Other landholders who have been similarly assessed are watching the result of the case.

Rajapur scheme.

147. The survey operations in this scheme were completed during the year and the records were prepared. Preliminary apportionments have also been made and confirmed by the Drainage Commissioners.

Advances under the Land Improvements and Agriculturists Loans Acts.

148. A sum of Rs. 26,500 was allotted to this Division, and was distributed among the several districts, except Birbhum, according to their requirements. Out of the large sum allotted only Rs. 11,600 were advanced, viz., Rs. 11,350 under the Land Improvements Act and Rs. 250 in Burdwan under the Agriculturists Loans Act. Very few applications were made, as the excellent harvest of the year enabled the people to carry out improvements out of their own sources and to obtain advances from local money-lenders. The amount realisable during the year was Rs. 50,961, of which Rs. 35,323 were collected and Rs. 1,317 remitted, leaving a balance of Rs. 14,321. The balances were highest in the districts of Burdwan and Bankura. In Hooghly the demand was collected in full, and in Midnapore out of a demand of Rs. 8,637, Rs. 8,320 were collected, leaving a balance of Rs. 316 only. The whole of the unrealised balance is in course of realisation under the certificate procedure.

XVIII.—ATTACHED ESTATES, INCLUDING COURT OF WARDS.

149. The following note recorded by Mr. Dutt on the Attached and Court of Wards' estates in the Division is so full that I have little to add to it beyond supplying particulars in connection with the estates released during the year in the district of Midnapore:—

Burdwân.

"Raja Ban Bihari Kapur continued to be the sole manager of the Burdwan Raj estate, which is under the management of the Court of Wards. The Raja is keenly

alive to the interests of the estate and possesses tact, ability, and judgment, and his management shows signs of steady improvement. There is room, however, for further improvement, specially in the matter of accounts and expenditure. Advances made several years ago and found irrecoverable are being written off now, but much time is taken by the Manager's office in the submission of the remission statements. Much time is also taken in submitting explanations called for by the Audit Deputy Collector who audits the Raj estate accounts, and it is not seldom found that expenditure has been irregularly incurred under the head of advances or some similar heads. Signs of gradual improvement are perceptible, however, in all these matters.

"A European companion has been appointed for the young Maharaj Kumar. He is an intelligent boy, but it is desirable that he should at this age take a lively interest in games or active exercises or other healthy pursuits. He seems to be moving too much in a prescribed narrow grove, and I doubt if this is the best training that could be given to a healthy, active lad.

"The work of settlement of the Burdwan Raj khas mahals was going on during the year, and is nearly completed. Babu Sukumar Haldar is the Settlement Officer. The Manager does not seem to estimate the benefits of this settlement very highly. The settlement of ghatwali lands in Bankura district with the Raj estate is also proceeding, and, as I have stated elsewhere, the work has been completed with regard to two ghats, *Bankadaha* and *Jaibelia*. Deputy Collector Babu Jnan Sankar Sen who is doing this work has shown tact, ability and judgment.

"Sujamutha estate in Midnapore district has been a source of loss to the Raj estate from year to year. After a great deal of trouble an amicable settlement was effected with the raiyats by Raja Ban Behari Kapur some four years ago, and the Settlement Officer accepted the arrangement. The crops of the estate have, however, been seriously damaged year after year since that date, and the realisation is therefore exceedingly poor. The Manager seriously doubts whether it is worth while keeping this estate for the Raj.

Bankura and Howrah.

"The Maliara estate in the district of Bankura has been excellently managed by the Manager, Babu Chunder Kumar Ghosh, who deserves much credit for his work. Sankarpur estate in Howrah is managed from the Rajshahi Division.

Midnapore.

"The estates named below were released from the administration of the Court of Wards during the year under report in Midnapore district:—

Moheshpur.

"This estate was released on the application of the mother of the minor proprietor. Both the Collector and my predecessor, Mr. Dutt, were satisfied that the lady was perfectly competent, with the help of her father, to manage the property. The estate had no encumbrances when it was released.

Belki estate.

"Our management of this estate has been most unfortunate. When we took charge of the estate it was valued at Rs. 52,329, and its liabilities amounted to Rs. 10,243. We sold portions of the estate till its value was reduced to Rs. 22,422, and yet all we could do was to reduce the debt to Rs. 10,216 only. To add to our difficulties, the aunt of the minor instituted a suit for possession of half of the estate, and her claim was considered valid by the Government Pleader. Suits were also brought by some of the creditors. When affairs had come to this pass, the minor proprietor, who was 18 years of age at the time, and seemed to possess a competent knowledge of zamindari business, applied for the release of the estate, which was accordingly made over to him.

Baraberia Estate.

"The management of this estate was equally disastrous to the proprietor. When brought under the Court of Wards in 1881 it was valued at Rs. 60,175. When released in March last on the minor attaining his majority, the estate was worth Rs. 9,890 only with liabilities amounting to Rs. 10,216.

Jellamutha.

"This estate was attached for non-payment of Government revenue due from a Court of Ward's estate which had been released in 1893-94. After full satisfaction of the Government demand the estate was released on the 23rd February last.

"Among the estates which have been left on our hands, Malighati and Turka are large and solvent estates, and each of these is managed by a separate Manager. I have been pleased with the work of the Manager of the Turka estate, but have had to find fault with the Manager of the Malighati estate on more than one occasion during the year in connection with his administration.

"It is a pity that the Jambani estate was ever brought under our administration. The estate was deeply involved in debts and litigation, and the mother of the minor was competent to manage it and desired to manage it, but her prayer was rejected, and the estate was brought under our management. Early in the year there was a case before the District Judge about a will supposed to have been left by the minor's father. The will was not found to be genuine, and probate was refused. Later on the minor's mother applied to the Board for release of the property on the ground of her competency to manage it and on other grounds. I recommended the release, both because I found her on examination to be familiar with zamindari work, and because I thought she could deal with the numerous pending cases more economically and perhaps successfully than we could. I also took exception to the conditions on which the Collector had granted a lease of the indigo lands in the estate immediately after assuming administration of the estate. Before the Board of Revenue passed any orders in the matter, one of the pending cases, which we were managing for the minor in Midnapore, was decided against the minor, and the result of this decision was that the whole of the property passed to the plaintiff, and the estate which we had undertaken to administer for the minor disappeared, so far as that minor was concerned. The plaintiff further obtained the orders of the Civil Court to obtain possession of the whole zamindari, and if these orders stand, we are out of possession, and our administration comes to a violent end. This was the state of things at the close of the year.

"For some years past our administration of several estates brought under the Court of Wards in Midnapore district has not been as successful as it ought to be, and several estates have been released in a very involved or in a hopelessly insolvent condition. The administration of the year under report is not a bright exception to this rule."

XIX.—EXCISE.

150. The total number of shops of all kinds settled during the year was 2,983 against 2,938 and 2,827 in the two preceding years. The figures for 1893-94 as compiled from the district reports show an increase of 8 shops as compared with those given in the Divisional General Administration Report for that year, viz., 7 in Howrah under head Tari and 1 in Birbhum under that of Imported wines.

151. The settlement of tari shops by auction has been abandoned, and the Madras system of taxing each tari-producing tree has been experimentally introduced. The Collector of Burdwan states that no real progress has been made in the matter. Mr. Grierson, however, observes that some further progress was made during the year in the introduction of the system. Licenses were settled on applications accompanied by schedules showing the number and position of the date and palmyra trees that a vendor intended to tap during the year, and a condition was inserted in the license forbidding the sale of the juice of any tree not entered in the schedule. As there were several candidates for one shop, the licenses were settled with the person who returned the largest number of trees in his schedules.

152. The total excise revenue of the Division derived from all sources amounted to Rs. 12,32,360 during the year against Rs. 11,72,190 in the previous year, showing in the aggregate an increase of Rs. 60,170. The rise in the revenue was general under all heads except Tari and Ganja. The increase of revenue from pachwai and country spirit was very marked, the receipts being Rs. 2,57,627 and Rs. 3,31,858 against Rs. 2,35,082 and Rs. 3,10,984 respectively received during the preceding year. In the case of

pachwai it is due partly to agricultural prosperity and the consequent improvement in the circumstances of the people and partly to better management and more careful supervision. Partly also I have no doubt to a growing taste for pachwai, which is a cheaper and more wholesome beverage than distillery spirit. In the case of country spirit the increase was highest in Midnapore, and the Collector attributes it partly to the re-opening of the Ghatal and Tamluk depôts from January 1894 and partly to better settlement owing to competition.

153. Under the head of Tari the revenue fell from Rs. 77,218 to Rs. 75,742. The falling off in Howrah alone amounted to Rs. 1,826. The Covenanted Deputy Collector states that the revenue from this article increased steadily year by year almost without interruption till it reached its maximum in 1893-94. The fall in the revenue of last year was entirely due to the practice followed by the tappers in the service of the Howrah town vendors of engaging all the trees along the borders of the municipality and carrying on illicit sales, thus leaving our shops unsettled to the great injury of the revenue. He reports that unless the tree license system be introduced in Calcutta or the tappers' passes be taxed, there is no way to make up the fall in the revenue.

154. The incidence of excise revenue per head of the population during the year was 2 annas 2 pie against 2 annas 6 pie in the previous year.

155. Mr. Dutt has left on record the following remarks on the administration of the Excise Department:—

"The most important measure that was adopted during the year, or rather immediately on its close, in the administration of excise in this Division, was the reduction of duty on distilled liquor for Jahanabad subdivision from Rs. 4 to Rs. 2. It was suspected on very good grounds that there was a great deal of illicit distillation in Jahanabad subdivision, and special preventive measures were adopted within the year. A special police force was appointed in January last, and they succeeded in detecting a good number of important cases in a short time. Illicit distillation was thus greatly checked, and there was a marked increase in the consumption of licit liqour. It was unnecessary, I think, to reduce the duty on licit liquor after this, but the measure was adopted with effect from the 1st April last. I am willing to admit that such a reduction would be desirable if it was the only way open to us to stamp out illicit distillation. It would be, however, a confession of administrative weakness to say that illicit distillation could not be stopped otherwise, and as a matter of fact illicit distillation was greatly checked, and the consumption of licit liquor went up to a marked extent in consequence of the measures adopted in January, February, and March last. There was no necessity after that to reduce the duty on liquor in Jahanabad subdivision from Rs. 4 to Rs. 2 the gallon; and I hope the Excise Department, while strongly insisting on preventive and detective measures, will find it possible to raise the duty again to Rs. 4 the gallon, which is the prevailing rate all over Bengal. It is undesirable to cheapen liquor in one particular subdivision in Bengal, where the temptations to drunkenness are already so great. The consumption of distilled liquor was about 80 gallons in April 1894; it went up to 376 gallons in April 1895 after the reduction of duty."

156. In regard to these criticisms, I need only say that the matter was fully considered by Government, and that it was the deliberate opinion of the Lieutenant-Governor that the great abuses prevailing in Jahanabad could not be checked by detective and preventive operations alone, but that a simultaneous reduction of the duty was imperatively necessary. The figures quoted by Mr. Dutt may, with equal force, be utilised to prove not that drinking has increased more than fourfold, but that the consumption of licit liquor has replaced that of illicit liquor to that extent.

XX.—STAMPS.

157. The total revenue from the sale of stamps during the year amounted to Rs. 19,49,534, including Rs. 33,449 realised from the sale of plain paper, against Rs, 19,61,616 obtained in the preceding year; the result is a decrease of Rs. 12,082, or ·6 per cent. The following statement shows the revenue

derived from the sales of stamps of different descriptions in the several districts of the Division during the year:—

District.	Court fees.	Copies.	Non-judicial adhesive (notarial).	Receipts.	Non-judicial impressed.	General.	Court paper.	Total.	Remarks.
1	2	3	4	5	6	7	8	9	10
	Rs.	Rs.	Rs.	Rs	Rs.	Rs.	Rs.	Rs.	
Burdwan ...	2,88,894	20,418	...	4,981	75,275	4,432	6,337	4,00,337	
Birbhum ...	1,39,182	9,502	...	2,284	34,249	1,572	3,660	1,90,449	
Bankura ...	1,69,815	13,543	1	1,320	38,365	1,600	3,488	2,28,132	
Midnapore ...	4,17,403	24,612	1	4,571	1,10,643	3,655	11,175	5,72,060	
Hooghly ...	2,89,404	18,506	13	3,482	48,138	4,175	4,635	3,68,353	
Howrah ...	1,37,535	7,604	3	3,903	35,311	1,692	4,155	1,90,203	
Divisional total for 1894-95.	14,42,233	94,185	18	20,541	3,41,981	17,125	33,449	19,49,534	
Divisional total for 1893-94.	14,55,161	92,134	24	20,313	3,43,865	16,828	33,291	19,61,616	

158. This decline in the revenue is mainly accounted for by a decrease in the receipts under the head of court-fee stamps, which fell from Rs. 14,55,161 to Rs. 14,42,233, or 8 per cent., a decrease which was accidental, being entirely the result of the sale during 1893-94 of a single stamp of the value of Rs. 24,362 required for a certificate of administration taken out in Burdwan by the executors of the will of the late Lala Bangshgopal Nandi. There was a slight decrease amounting to Rs. 1,587 under the head of non-judicial impressed, including general, stamps. The decrease was nominal, except in Midnapore, and even there the falling off was only 2·5 per cent. on the figures of the previous year. Under the head of one-anna receipt stamps there was an increase of Rs. 228, which is attributed to the more careful observance of the law by all classes of the people. This explanation, if true, is satisfactory, and judged by this test Midnapore seems to be the most virtuous district in the Division. Without trusting too much to this improvement, it is reasonable to propound the more prosaic suggestion that the increase may also denote the development of business in a year of general prosperity.

159. The number of cases in which duty and penalty were levied by the civil courts and the Collectors fell from 159 and 435 to 149 and 376 respectively. Rupees 1,116 were levied as duty and penalty by the civil courts and Rs. 2,756 by the Collectors, making a total of Rs. 3,782 against Rs. 4,193 in 1893-94.

160. The number of prosecutions instituted during the year for breaches of the provisions of the Stamp Law was 77 against 42 in the preceding year. The number of persons brought to trial was 79, of whom 57 were convicted against 42 and 20 in the preceding year. The fines imposed and the rewards paid were Rs. 765 and Rs. 62 against Rs. 169 and Rs. 28 respectively in the preceding year.

161. A most serious case of defalcation of stamps occurred in the Bankura treasury, where one rupee court-fee labels to the value of Rs. 13,140 were fraudulently abstracted from a consignment received from the Superintendent of Stamps. The usual enquiries were made, but the actual thief was not detected. As, however, the occurrence was the consequence of grave breaches of the rules and neglect of ordinary precautions in the treasury, the Treasury Officer and the Treasurer have been jointly made reponsible for the loss.

XXI.—INCOME-TAX.

162. The final demand on account of income-tax stood at Rs. 2,21,036 assessed on 9,566 persons against Rs. 2,12,262 assessed on 9,343 persons in the previous year, showing an increase of Rs. 8,774 and of 223 assessees. There was an increase both in the demand and in the number of persons assessed in the districts of Burdwan, Birbhum, and Midnapore. In Howrah there was a decrease in the number of persons though the demand showed an increase. In Hooghly there was an increase in the number of assessees, but a decrease in the demand. In Bankura there was a decrease under both the

heads. The increase in the demand was principally contributed by Burdwan and Midnapore. The increase is apparently due to the careful revision of assessment in the towns, the principal marts and the centres of trade by the assessing officers. The decrease in the demand in the Hooghly district is due to the fact that the income of one assessee who had paid a tax of Rs. 1,919 on account of accumulated interest for money in the preceding year was considerably less during the year under report. The decrease in Bankura is due to the general falling off of the trade of the district owing to the opening of the Bengal-Nagpur Railway. Since that event occurred, the wants of the west of the district are supplied from Purulia, and its exports go to the same mart, and Bankura has ceased to be a central emporium.

163. The collection of tax during the year amounted to Rs. 2,19,957, and the balance on the 31st March 1895 was Rs. 1,079, of which Rs. 466 are reported to be good and under realisation. The percentage of collection on the final demand on account of tax only was 99·5. The number of objections filed was 1,097 against 1,033 in the preceding year. The increase is said to be due to the assessment of new assessees and to enhancements of tax on revision.

164. Mr. Dutt has left the following remarks on record:—

"Judging from the appeals which came before me for hearing, I cannot say that assessments are made with the same degree of care in all the districts of the Division, but in Burdwan Babu Abinash Chandra Basu, Deputy Collector, performed his work with diligence and care, and endeavoured in each case to ascertain the income of the assessee from such facts as it is possible to obtain.

"There is a tendency on the part of assessors to assess people on vague rumours without any enquiries about the probable income. There is also a tendency on the part of Deputy Collectors to rely on alleged local enquiries made by assessors without finding out if the facts ascertained by such enquiries justify the assessment in each case.

"Assessment in most cases must be guess-work, but it is possible to ascertain facts which will make our guess approximately correct. In the case of shopkeepers the daily sales can be roughly ascertained. In the case of big traders the total transactions during the year can be found out from books, and a probable rate of profit calculated thereon. In the case of money-lenders the whole of the money lent on interest can be easily ascertained from documents and books. In every case it is possible to get at some facts which will make our guess approximately correct. And it is the duty of the officers entrusted with the work of assessment to ascertain such facts in each case and make them the basis of assessment. Deputy Collectors and assessors do not always recognise this duty, and their assessments are therefore sometimes utterly without any foundation on any ascertained facts or calculations."

XXII.—MONETARY ARRANGEMENTS.

165. The following statement shows the value of the currency notes received in and issued from the treasuries of the Burdwan Division during the last two years:—

	1893-94.		1894-95.	
District.	Received.	Issued.	Received.	Issued.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
Burdwan ...	24,86,495	23,89,085	23,20,650	23,12,380
Birbhum ...	7,18,605	6,62,205	6,61,975	6,42,090
Bankura ...	1,90,390	2,03,920	4,01,955	4,08,225
Midnapore ...	14,29,595	16,04,375	12,71,560	12,03,265
Hooghly ...	25,04,850	22,34,055	19,24,570	18,79,235
Howrah ...	3,66,635	3,66,140	4,55,535	4,54,970
Total ...	76,96,570	74,59,780	70,36,245	69,00,165

It will be seen that there was a falling off in both receipts and issues, while in 1893-94 as compared with 1892-93 there was an increase under both heads, the figures for that year being Rs. 72,61,770 for receipts and

Rs. 73,68,885 for issues. The fluctuations do not bear a large proportion to the total transactions, and it seems hardly necessary to submit any special explanation for the figures: at any rate, none has been furnished by any District Officer. It is conceivable that they may to a certain extent be due to a better appreciation of the money-order system by the people, but I hardly think so. Remittance by money-order is undoubtedly much safer than by currency notes in an uninsured registered cover, but the remittance of notes by post registered and insured is much cheaper than the employment of the money-order system. At the same time the system is very convenient for the despatch of small sums. This subject would have been further discussed but for the fact that unfortunately some of the District Officers have failed as in former years to give particulars of money-orders of all descriptions. I am compelled therefore to abandon this branch of the subject and confine my remarks to money-orders issued for the payment of revenue and rent.

166. The number of money-orders for the payment of land revenue amounted during the year to 36,209 to the value of Rs. 2,49,342 against 36,725 orders aggregating Rs. 2,45,493 in 1893-94. The figures for the two years are practically identical, the only differences being a slight decrease in the number of money-orders, but an increase in the amount remitted, the variation being 1·03 and 1·5 per cent. respectively. The Collectors of the Division have suggested different explanations of the fluctuations, but I have no doubt that the true reason why the system has not developed is to be sought in the *vis inertiæ* of native conservatism. Moreover, as the Collector of Birbhum has pointed out, the zamindars still prefer to pay their revenue through their agents at head-quarters. It is usually much more convenient to a zamindar to pay through an agent at head-quarters, who may be trusted to remember the due dates, than to have to bear these dates in mind himself, and then to go through the trouble of filling up and despatching a revenue money-order. Furthermore, the agents themselves oppose a passive, if not active, resistance to the introduction of the money-order system, since they find it to their profit to maintain the existing arrangements which enable them to charge a commission on all payments as well as interest on sums advanced when the balance of their accounts is against the zamindar.

167. Complaints continue to be made against the form of the money-order, and more than one case has come before me in appeal in which property has been sold because the space for the entry of payments for land revenue and cesses are so close together as to invite this confusion.

168. There was a falling off both in the number and value of money-orders in payment of rents. Similarly, a falling off is noticeable in the number of refusals, but an increase in the amount refused. All the Collectors of the Division are of opinion that the system has not found favour with the landlords. The great reason of the unpopularity of the system lies in the loss which it entails on the ill-paid amlas of whom every landlord maintains a large number. Speaking generally, I believe that the payment of rent by money-orders is still to the slow moving conservative agriculturist a novel experiment to be regarded with suspicion and to be ventured upon only when for some special reasons the old methods are unsuitable. The consequence is that the development of the practice is usually in inverse ratio to the friendliness of landlord and tenant, and that, special and particular reasons apart, a local increase of payments in this manner should be regarded as the stormy petrel of agrarian disturbance rather than the harbinger of a new dawn of intelligence.

169. To the Collector of a district which sends out an emigrant population an examination of the number, amount and place of issue of money-orders paid in the district will yield much interesting information, and the attention of Collectors will be drawn to the point.

170. As already reported, the Post Office Savings Bank has proved beneficial to the middle classes. The Collectors of Burdwan, Midnapore, and Hooghly not having furnished any figures under this head, the general result of the transactions of the Division cannot be reported or examined. From the figures supplied by the Collectors of Birbhum and Bankura it appears that in both districts the deposits were smaller than in the previous year, and the total amount withdrawn was larger. The co-existence of these two phenomena suggest a reduced appreciation of the system which it may be hoped is temporary only.

The Collector of Birbhum considers it probable that the reduction of the rate of interest from Rs. 3-12 to Rs. 3-2 per annum is the cause of the falling off in the deposits. The figures for Bankura and Birbhum are as follows:—

District.	Amount deposited.		Amount withdrawn.		Remarks.
	1893-94.	1894-95.	1893-94.	1894-95.	
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	
Birbhum	88,692	75,443	85,784	91,866	
Bankura	1,30,251	1,10,922	1,28,641	1,55,503	

XXIII.—RAILWAYS AND OTHER PUBLIC WORKS.

171. The construction of the railway from Tarakeswar to Magra in the district of Hooghly was completed and the line formally opened for traffic on the 2nd April 1895. The Tapasi extension in the district of Burdwan is not yet formally open for passenger traffic, but arrangements to run passenger trains over it are almost complete. A line from the Raniganj railway station running over a distance of two miles was opened to meet the convenience of the paper mills at Raghunath Chak, and it is working solely for the use of those mills. After a good deal of discussion it has practically been decided to open a viaduct station in the town of Hooghly on the branch line which connects the East Indian and the Eastern Bengal Railways by way of the Jubilee Bridge. The municipality have guaranteed the minimum monthly earnings which the East Indian Railway demand as a condition precedent to the opening of the station. Since the close of the year, the long-looked-for Howrah-Amta Tramway has been commenced. A proposal has been made by the District Board of Burdwan to call for tenders for a tramway or railway from Burdwan to Katwa: the traffic on this road is very heavy, and a scheme well planned and economically carried out should certainly prove remunerative.

172. The following table shews the number of accidents and obstructions on the railway during the last two years and the number of casualties:—

District.	Persons—				Trains—			
	Killed.		Wounded.		Accidents.		Obstructions.	
	1893-94.	1894-95.	1893-94.	1894-95.	1893-94.	1894-95.	1893-94.	1894-95.
1	2	3	4	5	6	7	8	9
Burdwan	31	21	21	10	46	29	...	...
Birbhum	3	1	...	1	...	...	1	1
Hooghly	3	7	7	4	10	10	...	2
Howrah	...	...	...	...	...	...	...	...

The improvement in Burdwan is very marked; but, as the Magistrate does not comment on it, I presume that it is fortuitous only. There were no accidents during the year deserving of special notice, most of the cases which occurred being of a simple character and due to more negligence on the part of the injured, or to unavoidable accident.

173. No public works deserving of special mention were executed during the year besides those in paragraph 178 below.

XXIV.—COMMUNICATIONS.

174. As remarked last year, this Division is fairly well off as regards means of communication, with the exception of the district head-quarters of Bankura and the two outlying subdivisions of Vishnupur and Jahanabad. The Magra-Tarakeswar branch line, opened during the year, has been a useful addition to the existing means of communication in the district of Hooghly. The East Indian Railway connecting the district head-quarters of Suri, Burdwan, Hooghly, and Howrah and the subdivisional head-quarters of Rampur Hát, Raniganj and Serampore, the steamer service connecting the subdivisions of Katwa, Kalna, Serampore, Uluberia, Ghatal, Tamluk and Contai, all converge upon the town of Howrah.

175. As a large portion of the allotment for roads is absorbed in maintaining the existing roads, the District Boards could not undertake the construction of any new ones. The village roads are generally in a bad state for want of funds. In Burdwan the road from the head-quarters station to Katwa, a distance of nearly 36 miles, is in bad condition and requires a large outlay for the metalling of it, but the work is delayed for want of funds. A scheme for running a steam tramway or a branch railway along this is under consideration. The roads in the Raniganj subdivision are said to be good; those in the Kalna and Katwa subdivisions are mostly unmetalled and become impassable during the rains. The District Boards of Burdwan and Hooghly have co-operated in improving the road from Burdwan to Jahanabad at the suggestion of my predecessor, Mr. Dutt. The roads in the district of Birbhum continued in an extremely bad state of repair, and were fast deteriorating. The District Engineer who had been in the district for about six years, but who has never been fit for his post, has at last received notice of dismissal. The only pity is that the District Board suffered him so long. The roads in the districts of Bankura and Midnapore were generally well kept up. In Hooghly the subdivision of Jahanabad is the most backward in respect of communications, but the metalling of the road from Burdwan to Jahanabad will remove this long-felt want to a great extent. The roads of the Howrah Municipality are said to be in an unsatisfactory condition owing to want of funds. The district roads are also suffering greatly for the same reason.

176. The following statement shows the length of roads maintained by the District and Local Boards and the municipalities in each district;—

District.	Description of roads.	By whom maintained.				Remarks.
		District Board.	Local Board.	Municipality.	Total.	
1	2	3	4	5	6	7
Burdwan ...	Metalled	Miles. 260(a)	Miles. ...	Miles. 46	Miles. 312	(a) This includes 108 miles of Provincial roads.
	Unmetalled	252	267½	36½	556	
	Total ...	518	267½	82½	868	
Birbhum ...	Metalled	129½	...	14½	143½	
	Unmetalled	375½	16½	...	392½	
	Total ...	505½	16½	14½	536½	
Bankura ...	Metalled	214	...	31½	245½	
	Unmetalled	337	...	2½	339½	
	Total ...	551	...	34	585	
Midnapore ...	Metalled	306	...	72½	378½	
	Unmetalled	374	420	29½	823½	
	Total ...	680	420	101½	1,201½	
Hooghly ...	Metalled	114	...	81½	195½	
	Unmetalled	423	249½	120½	793½	
	Total ...	537	249½	202	988½	
Howrah ...	Metalled	13½	...	66½	79½	
	Unmetalled	61½	114	20½	196½	
	Total ...	75	114	86½	275½	
	Divisional Total ...	2,366½	1,067½	811½	4,444½	

It will be seen from the above table that the District Boards in this Division have to maintain 1,043 miles of metalled and 1,823 miles of unmetalled road, and that the municipalities of the Division maintain 521 miles of road.

177. The following statement shows the amount expended on roads and other public works in the districts of this Division:—

District.	1893-94.								1894-95.								Remarks.
	Original works.	Repairs.	Establishment.	Tools and plat.	Water-supply and water-works.	Total expenditure.	Total allotment.	Percentage of expenditure.	Original works.	Repairs.	Establishment.
